GENERAL INFORMATION

ORDERING INFORMATION:

Carr Lane Manufacturing products are sold by authorized distributors located throughout North America and the rest of the world. Please see our website or contact us for the name of our qualified stocking distributor nearest you. For technical information, contact our factory engineering staff at 314-647-6200 (1-800-827-2526 for power workholding technical information).

SPECIALS:

Carr Lane Manufacturing will gladly make any special tooling components or company tooling standards to your specifications. Please send a print or sketch with your request. Our wide range of manufacturing capabilities allows us to quickly produce special items for you at economical prices.

DIMENSIONS AND TOLERANCES:

All drawings in this catalog are shown in Third-Angle Projection:

In general, the following maximum tolerances apply to dimensions in this catalog, unless otherwise specified:

- .xxx ±.005
- .xx ±.020
- .x ±.050
- Fractions ± 1/32
- Castings, forgings, molded plastics, and assemblies ± 1/8

FINISH SPECIFICATIONS:

The finishes shown in this catalog are applied according to the following specifications:

- Black Oxide – MIL-C-13924C
- Clear Zinc – ASTM-B633 SC III, Type V SC III
- Yellow Zinc – ASTM-B633 SC III, Type VI SC III
- Cadmium Plate – QQ-P-416, Class 3, Type 1
- Black Anodize – MIL-A-8625, Type II, Class 2

Other finishes are available as specials.

ANSI & TCMAI STANDARDS:

Whenever appropriate, our tooling components meet the standards of the American National Standards Institute (ANSI) and the Tooling Component Manufacturers Association International (TCMAI).

TRADEMARKS:

Numerous trademarks appear throughout this catalog. Delrin® and Zytel® are registered trademarks of E.I. du Pont de Nemours & Co. HAAS® is a registered trademark of Haas Automation Inc. Heavy Duty® Hoist Ring is a registered trademark of ADB.Invar36® is a registered trademark of Carpenter Technology Corporation. WELD MOUNT® is a registered trademark of Royal Adhesives and Sealants, LLC. All other trademarks contained herein are those of Carr Lane Mfg. Co. and its affiliates.

ENGINEERING CHANGES:

All Carr Lane Manufacturing products are continually subject to possible design improvements. We include any engineering changes as soon as possible in our catalogs, tracing templates, CAD tooling libraries, and other literature. However, due to inevitable time lags, dimensions and specifications are subject to change without notice.

GUARANTEE OF QUALITY:

Carr Lane Manufacturing warrants that the products described herein will be free from defects in material and workmanship. If you find any failure to conform to this warranty within 90 days from date of receipt of the product, and give us immediate notification thereof, we will replace the defective product or make suitable repairs. If we are unable to correct such nonconformity by replacing the product or making suitable repairs, whether due to the nature of such nonconformity, your use of the product, or for any other reason, we will refund the purchase price upon receipt of the nonconforming product f.o.b. our plant. No product should be returned to us without a return-authorization number. In no event shall we be liable either directly or by way of contribution or indemnity, for direct, special, incidental or consequential damages such as, but not limited to, property damage, loss of profit, or damages based on loss of use of the product, whether the claim for any such damages be based on warranty, express or implied, contract, tort, or otherwise. This warranty does not apply to products that are misapplied, altered, or abused. The foregoing is our sole warranty with respect to the product. We make no other warranties, express or implied, including implied warranties of merchantability and fitness for a particular purpose.

SAFETY PRECAUTIONS:

Machine tools pose many potential hazards. Observe all appropriate safety precautions, including those specifically listed in this catalog.

L PINS, T PINS, JIG PINS AND CLAMPING PINS

1

L PINS, T PINS, AND JIG PINS

Standard Type

These L Pins, T Pins, Shoulder Pins, and Jig Pins are removable locating pins, precision ground for accurately aligning holes. Available in pin diameters from 1/8 to 3/4", including some number and letter sizes (4 to 20mm in metric), most in a choice of several pin lengths.

Captive Type

Similar to standard jig pins, except that the pin body is positively retained in a locking bushing. In fully retracted position, the bushing's spring clip snaps into the pin's groove. This holds the pin fully retracted by spring force and positively prevents removal. Spring pressure also holds the pin in intermediate extended positions, an advantage especially if the fixture is turned upside down. Available in pin diameters from 3/16 to 1/2" (6 to 12mm in metric), most in a choice of several pin lengths. Choice of standard or long bushing in most sizes, for installation in thinner or thicker plates.

CLAMPING PINS

Standard Type

Clamping Pins are threaded alignment pins that can be used for locating and clamping, or clamping only, depending on extended screw length. Available in thread sizes from #10-32 to 1/2-13 (M6 to M12 in metric).

Captive Type

Captive clamping pins and locating screws can be used for locating and clamping, or for clamping only, by selecting the appropriate screw length. The locating screw's precision-ground body is positively retained in a locking bushing. In fully retracted position, the bushing's springclip snaps into the body's radial groove. This holds the screw fully retracted by spring force and positively prevents removal. Spring pressure also holds the screw in intermediate extended positions, an advantage especially if the fixture is turned upside down. Available in thread sizes from 1/4-20 to 1/2-13 (M6 to M12 in metric). Choice of standard or long bushing in most sizes, for installation in thinner or thicker plates.

L & T PINS

PIN: 1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
HANDLE: 1215 STEEL, BLACK OXIDE FINISH

1

L Pin

T Pin

L and T Pins are removable locating pins, precision ground for accurately aligning holes. The pin is inset in the handle and silver soldered to create a sturdy assembly. The handle is drilled for attaching a cable.

To order L or T Pins with a standard 10-12" cable assembly attached, add "-C" to the part number. (CL-2-C cable with a terminal for #10-32 or M5 attachment screw).
Example: CL-7-LP-C

SHOULDER PINS

PIN: 1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
HANDLE: 1215 STEEL, BLACK OXIDE FINISH

1

To order Shoulder Pins with a standard 10-12" cable assembly attached, add "-C" to the part number. (CL-2-C cable with a terminal for #10-32 or M5 attachment screw).
Example: CL-7-SP-C

Removable locating pin with a straight handle, precision ground for accurately aligning holes. The handle is drilled for attaching a cable.

SHOULDER POTTING PINS

1144 STEEL, BLACK OXIDE FINISH

New item!

Shoulder Potting Pins are removable alignment pins used for positioning components to be potted in carbon-fiber composites. The precision-ground pin body and the handle are made from one solid piece of high-carbon steel. The handle end is tapped to allow using a pulling tool. Available in pin diameters from 1/8 to 1/2".

JIG PINS

PIN: 1144 STEEL, HEAT TREATED, BLACK OXIDE FINISH
HANDLE: SPRING STEEL, BLACK OXIDE FINISH

1

Similar to L and T Pins, but with a shoulder to keep the handle raised. Pins are ground slightly undersize. To convert from an L handle to a T handle, slide the roll-pin handle by tapping it with a hammer.

LOCKING L PINS

PIN: 1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 HANDLE: 1215 STEEL, BLACK OXIDE FINISH
 BUSHING: 8620 STEEL, CASE HARDENED, BLACK OXIDE FINISH

1

Similar to a standard L Pin, except that the pin body is positively retained in a locking bushing. In fully retracted position, the bushing's spring clip snaps into the pin's radial groove. This holds the pin fully retracted by spring force and positively prevents removal. Spring pressure also holds the pin in intermediate extended positions, an advantage especially if the fixture is turned upside down. Available in pin diameters from 3/16 to 1/2" (6 to 12mm in metric), most in a choice of several pin lengths.

Locking-Pin Bushings are designed to press fit in a standard reamed hole. Secure with the included Lockscrew to positively hold the bushing in place. Shorter or longer bushings are available in most sizes, for thinner or thicker plates.

CAPTIVE JIG PINS

PIN: 1144 STEEL, HEAT TREATED, BLACK OXIDE FINISH
 HANDLE: SPRING STEEL, BLACK OXIDE FINISH
 BUSHING: 8620 STEEL, CASE HARDENED, BLACK OXIDE FINISH

1

Similar to a standard Jig Pin, except that the pin body is positively retained in a locking bushing. In fully retracted position, the bushing's spring clip snaps into the pin's groove. This holds the pin fully retracted by spring force and positively prevents removal. Spring pressure also holds the pin in intermediate extended positions, an advantage especially if the fixture is turned upside down. Like standard Jig Pins, Captive Jig pins have an integral shoulder to keep the handle raised. Available in pin diameters from 3/16 to 1/2". Made in USA.

Locking-Pin Bushings are designed to press fit in a standard reamed hole. Secure with the included Lockscrew to positively hold the bushing in place. Shorter or longer bushings are available in most sizes, for thinner or thicker plates.

CLAMPING PINS

PIN: 1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 BUSHING: 1215 STEEL, BLACK OXIDE FINISH

1

These threaded alignment pins can be used for locating and clamping, or clamping only, depending on extended screw length. The clamping bushing is furnished separate from the pin, and must be welded in place at the proper length to suit the application. Available in thread sizes from #10-32 to 1/2-13 (M6 to M12 in metric).

LOCKING CLAMPING PINS

PIN: 1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 HANDLE: 1215 STEEL, BLACK OXIDE FINISH
 BUSHING: 8620 STEEL, CASE HARDENED, BLACK OXIDE FINISH

1

Locking Clamping Pins are similar to standard Clamping Pins, except that the pin body is positively retained in a locking bushing. In fully retracted position, the bushing's spring clip snaps into the pin's radial groove. This holds the pin fully retracted by spring force and positively prevents removal. Spring pressure also holds the pin in intermediate extended positions, an advantage especially if the fixture is turned upside down.

These threaded alignment pins can be used for locating and clamping, or for clamping only, depending on extended screw length. The upper bushing is furnished separate from the pin, and must be welded in place at the proper length to suit the application. Available in thread sizes from 1/4-20 to 1/2-13 (M6 to M12 in metric).

Locking-Pin Bushings are designed to press fit in a standard reamed hole. Secure with the included Lockscrew to positively hold the bushing in place. Shorter or longer bushings are available in most sizes, for thinner or thicker plates.

CAPTIVE CLAMPING PINS

KNOB: 8620 STEEL, CASE HARDENED, BLACK OXIDE FINISH
 PIN BODY: 1215 STEEL, CARBURIZE HARDENED, BLACK OXIDE FINISH

1

Assembly with Knurled Knob

These Captive Clamping Pins have a knurled knob for tightening by hand and a pin body that is positively retained in a locking bushing. In fully retracted position, the bushing's spring clip snaps into the pin's radial groove. This holds the pin fully retracted by spring force. These pins also incorporate a positive thread stop (the .10"-long unthreaded portion with a square shoulder, above the threads) to positively prevent screwing the pin past the spring clip. Spring pressure also holds the pin in intermediate extended positions, an advantage especially if the fixture is turned upside down. Available in fine-thread sizes from #10-32 to 3/8-24.

These clamping pins must be ordered as three separate items: (1) Knurled Knob with roll pin; (2) Pin Body; (3) Locking-Pin Bushing. The Pin Body must be cut to length and pinned by the customer to suit the specific application (3" maximum A dimension). For dimensions and specifications of Locking-Pin Bushings, see opposite page.

LOCKING-PIN BUSHINGS

PRESS FIT: 8620 STEEL, CASE HARDENED, BLACK OXIDE FINISH
 THREADED: 1215 STEEL, CARBURIZE HARDENED, BLACK OXIDE FINISH

Press Fit

Locking-Pin Bushings are equipped with a retainer spring clip on the inside diameter. These bushings are used with all types of locking/captive pins and locating screws. Available for pin diameters 3/16 to 1/2" (6 to 12mm in metric). Some bushings are available in a choice of lengths, to suit thinner or thicker plates. Several bushing sizes are optionally available with an oversize ID (.040" larger), for applications with multiple pins where additional clearance is desired to prevent binding. Locking-Pin Bushings are designed to press fit in a standard reamed hole. Secure with a Lockscrew to positively hold the bushing in place – order separately as part number LS-1 (inch) or LSM-3 (metric).

SLOTTED LOCATOR BUSHINGS

STEEL: TOOL STEEL, HEAT TREATED RC 58-62, BLACK OXIDE FINISH
 STAINLESS: 440C STAINLESS STEEL, HEAT TREATED

1

Use with L Pins, T Pins, Shoulder Pins, or Carr Lock® Clamps to align two holes without binding. Precision bushing with a tight tolerance in one direction and full relief in the perpendicular direction. Available for 1/8 through 1" diameter pins (5mm-25mm in metric sizes). To install, first drill and ream hole for roll pin (furnished), then bore large bushing hole for .0003-.0005 press fit. Press in bushing and roll pin simultaneously for accurate orientation. **Patent no. 3,381,554.**

MULTI-ANGLE SLOTTED LOCATOR BUSHINGS

440C STAINLESS STEEL, HEAT TREATED, PASSIVATED

New item!

Slotted Locator Bushings can be used with many types of alignment pins and locating pins to align two holes without binding. The multi-angle version shown here can be installed normally (0°) or at a 90° or 45° angle in the same mounting hole without machining a different pin location. Slotted Locator Bushings have a tight tolerance in one direction and full relief in the perpendicular direction. Available for pin diameters from 1/4 to 1/2", in hardened 440C stainless steel. To install, first drill and ream the small hole for the roll pin, then bore the large bushing hole to provide .0003-.0005" press fit. Press in the bushing and roll pin simultaneously for accurate orientation.

Multi-Angle Slotted Locator Bushings can be installed normally (0°) or at a 90° or 45° angle in the same mounting hole without machining a different pin location.

SLOTTED LOCATOR TEMPLATE BUSHINGS

BUSHING: 1144 STEEL, CARBURIZED-HARDENED
RETAINER RING: ALUMINUM

Retainer Ring

Bushing

These Slotted Locator Bushings are designed for thin template jig plates from 3/64" to 3/8" thick. Use with L Pins, T Pins, or Shoulder Pins to align two holes without binding. Precision bushing with a tight tolerance in one direction and full relief in the perpendicular direction. Bushings are held in place by a threaded Retainer Ring (order separately). Flush contact of the Retainer Ring against the jig plate ensures perpendicularity. OD serrations prevent the bushing from rotating. Threaded Template Bushings can be easily removed to replace or reuse. Available for pin diameters from 3/16 to 3/4".

To install, drill hole in jig plate to nominal bushing OD (B diameter). Countersink 90° to allow bushing to seat flush to .015" below surface of plate. Install and tighten Retainer Ring to secure. To make Retainer Ring installation easier, we offer a handy Socket-Type Installation Tool that fits 1/4" square drives.

TECHNICAL INFORMATION

p. 47-49

p. 50-51

p. 52-53

p. 54-55

p. 56-57

p. 58-59

BALL LOCK PINS

Precision alignment pin with a ground shank. This popular single-acting type is positive locking until released by pushing the button, which moves the center spindle forward to allow the locking balls to retract into a radial groove. Widest range of types and sizes, in steel or stainless steel. Choice of four handle styles: T, L, Button, and Ring. Standard shank diameters from 3/16 to 1" (5 to 20mm in metric). Any grip length up to 6" (150mm in metric) is available as standard, at no extra charge. Available from stock in many standard grip lengths, or quickly made to order in custom lengths and diameters.

MARINE BALL LOCK PINS

Similar to our standard single-acting Ball Lock Pins in stainless steel, except this type has its handle and button made of 300-series stainless steel. Choice of two handle styles: Recessed Button and Ring. Shank diameters from 3/16 to 1/2", each available in a choice of several standard grip lengths. Available from stock only (not made to order).

HEAVY-DUTY BALL LOCK PINS

Similar to our standard single-acting Ball Lock Pins, except with a heavier handle for rough service. Available only in stainless steel. Handles are made of solid stainless steel for maximum impact strength and are specially shaped to prevent accidentally pressing the release button. Choice of four handle styles: T, L, Button, and Ring. Shank diameters from 3/16 to 1/2" (5 to 12mm in metric), each in a choice of several standard grip lengths. Available from stock only (not made to order).

ADJUSTABLE BALL LOCK PINS

These Ball Lock Pins have an adjustable grip length. They can be used for clamping, or simply to provide a variable grip length. The threaded handle turns to provide a 1/2" clamping range or adjustment range. Available in steel or stainless steel. Choice of three handle styles: Knob, T, and L. Standard shank diameters from 1/4 to 1" (6 to 20mm in metric), each in a choice of many standard grip lengths. Other grip lengths are available as specials (extra charge and longer delivery time).

DOUBLE-ACTING BALL LOCK PINS

Similar to a single-acting pin, except the center spindle has two grooves instead of one, to release the ball by either pushing or pulling. Pushing on the handle releases the balls and inserts the pin in one motion. Pulling on the handle releases the balls and removes the pin in one motion. Available in steel or stainless steel. Choice of three handle styles: T, L, and Ring. Standard shank diameters from 3/16 to 1" (5 to 20mm in metric). Any grip length up to 6" (150mm in metric) is available as a standard, at no extra charge. Available from stock in some standard grip lengths, or quickly made to order in custom lengths and diameters.

LIFTING PINS

A single-acting ball lock pin with a solid, one-piece body and four balls for high tension loads. Positive locking until released by pushing the button. Sturdy forged shackle for heavy lifting. Shank diameters from 1/4 to 1", each in a choice of several standard grip lengths. Available from stock only (not made to order).

**Pins with grip lengths over 8" (special) are not heat treated, in order to maintain straightness. Double shear strength will be reduced approximately 20-50%. Steel pins over 8" long will have a black oxide finish instead of plating. Pins in larger diameters than listed here are available as specials (may be made from alternate steels).

BALL LOCK PINS

SHANK (STEEL): 4130 STEEL, HEAT TREATED RC 36-40, ZINC PLATED YELLOW CHROMATE;
 SHANK (STAINLESS STEEL): 17-4PH STAINLESS STEEL, HEAT TREATED RC 40 MIN, PASSIVATED;
 SPINDLE: 17-4PH STAINLESS STEEL, PASSIVATED; HANDLE: ALUMINUM ALLOY, BLACK FINISH;
 BUTTON: ALUMINUM ALLOY, ANODIZED; COLLAR: 300-SERIES STAINLESS STEEL, PASSIVATED;
 SPRING & RING: 302 STAINLESS STEEL; BALLS: 440C STAINLESS STEEL

Precision alignment pin with a ground shank. This popular single-acting type is positive locking until released by pushing the button, which moves the center spindle forward to allow the locking balls to retract into a radial groove. Widest range of types and sizes, in steel or stainless steel. Choice of four handle styles: T, L, Button, and Ring. Standard shank diameters from 3/16 to 1" (5 to 20mm in metric). Any grip length up to 6" (150mm in metric) is available as standard, at no extra charge. Available from stock in many standard grip lengths, or quickly made to order in custom lengths and diameters.

Options

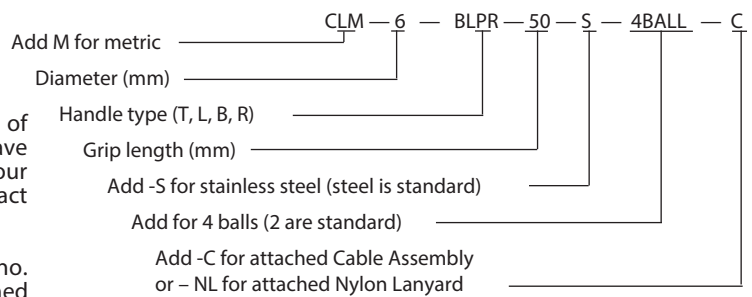

Ball Lock Pins are optionally available in stainless steel instead of alloy steel for greater corrosion resistance. (Note: Both types have aluminum handles, and buttons.) Pins are also available with four balls instead of two, as specials, for more-distributed ball-contact force.

The optional attached Cable Assembly (-C) is 12" long (part no. CL-82-KA-12.0 if ordered separately), while the optional attached Nylon Lanyard (-NL) is 10" long (part no. CL-1-NL-10 if ordered separately). Both have an eyelet at the free end for a #10 or M5 attachment screw.

MARINE BALL LOCK PINS

SHANK: 17-4PH STAINLESS STEEL, HEAT TREATED RC 40 MIN, PASSIVATED
 SPINDLE: 17-4PH STAINLESS STEEL, PASSIVATED
 HANDLE, BUTTON & COLLAR: 300-SERIES STAINLESS STEEL, PASSIVATED
 SPRING & RING: 302 STAINLESS STEEL
 BALLS: 440C STAINLESS STEEL

Similar to our standard single-acting Ball Lock Pins in stainless steel, except this type has its handle and button made of 300-series stainless steel. Choice of three handle styles: Buttons, Recessed Button and Ring. Shank diameters from 3/16 to 3/4" (5 to 16mm in metric), each available in a choice of several standard grip lengths. Available from stock only in the standard grip lengths listed below (other grip length available as specials).

Ordering Example (INCH):

Optional Cable

The optional attached Cable Assembly (-C) is 12" long (part no. CL-82-KA-12.0 if ordered separately), while the optional attached Nylon Lanyard (-NL) is 10" long (part no. CL-1-NL-10 if ordered separately). Both have an eyelet at the free end for a #10 or M5 attachment screw.

ADJUSTABLE BALL LOCK PINS

SHANK: 17-4PH STAINLESS STEEL, HEAT TREATED RC 40 MIN, PASSIVATED;
 SPINDLE: 17-4PH STAINLESS STEEL, PASSIVATED;
 T & L HANDLE: ALUMINUM ALLOY, BLACK FINISH; KNOB HANDLE: 319 ALUMINUM ALLOY;
 HEAD & LOCKNUT: 300-SERIES STAINLESS STEEL, PASSIVATED; BUTTON: ALUMINUM ALLOY, ANODIZED;
 SPRING: 302 STAINLESS STEEL; BALLS: 440C STAINLESS STEEL

1

These Ball Lock Pins have an adjustable grip length. They can be used for clamping, or simply to provide a variable grip length. The threaded handle turns to provide a +/- 1/4" clamping range or adjustment range. When used just for variable grip length (not for clamping), the handle can be secured with the supplied knurled locknut. These single-acting pins are manufactured with four balls as standard, instead of two, for more-distributed ball-pullout force in clamping applications. Available in stainless steel only.

Choice of three handle styles: Knob, T, and L. Standard shank diameters from 1/4 to 1" (6 to 20mm in metric), each in a choice of many standard grip lengths. Available from stock only in the standard grip lengths listed below. Other grip lengths are available as specials (extra charge and longer delivery time).

To order pins with a standard Cable Assembly attached (#2 cable size, 12" long, with a terminal at the free end for a #10 or M5 attachment screw), add "-C" to the part number:

CL-4-ABPK-1.50-S-C

Grip length adjusts +/- 1/4" from nominal.

Adjustable Ball Lock Pins can be used for clamping, or simply to provide a variable grip length.

Four balls are standard on Adjustable Ball Lock Pins, to provide more distributed ball-pullout force in clamping applications.

DOUBLE-ACTING BALL LOCK PINS

SHANK: 17-4PH STAINLESS STEEL, HEAT TREATED RC 40 MIN, PASSIVATED
 SPINDLE: 17-4PH STAINLESS STEEL, PASSIVATED
 HEAD, BUTTON & HANDLE: 300-SERIES STAINLESS STEEL, PASSIVATED
 SPRING & RING: 302 STAINLESS STEEL
 BALLS: 440C STAINLESS STEEL

1

Similar to a single-acting pin, except the center spindle has two grooves instead of one, to release the ball by either pushing or pulling. Pushing on the handle releases the balls and inserts the pin in one motion. Pulling on the handle releases the balls and removes the pin in one motion. Available in steel or stainless steel. Choice of three handle styles: T, L, and Ring. Standard shank diameters from 3/16 to 1" (5 to 20mm in metric). Any grip length up to 6" (150mm in metric) is available as a standard, at no extra charge. Available in stainless steel only.

Ordering Example (INCH):

Drive-Out Option

Double-acting Ball Lock Pins are available with a "drive-out" option, where the center spindle extends slightly beyond the shank end (see M dimension). This allows removing a pin under slight shear load by tapping the shank end with a hammer (releasing the balls at the same time).

Ordering Example (METRIC):

4-Ball Option

Ball Lock Pins are optionally available in stainless steel instead of alloy steel for greater corrosion resistance. Pins are also available with four balls instead of two, as specials, for additional pull-out strength and more distributed ball-contact force.

Optional Cable

The optional attached Cable Assembly (-C) is 12" long (part no. CL-82-KA-12.0 if ordered separately), while the optional attached Nylon Lanyard (-NL) is 10" long (part no. CL-1-NL-10 if ordered separately). Both have an eyelet at the free end for a #10 or M5 attachment screw.

LIFTING PINS

SHANK: 17-4PH STAINLESS STEEL, HEAT TREATED RC 40 MIN; SPINDLE: 17-4PH STAINLESS STEEL;
 SHACKLE: FORGED STEEL PER RR-C271, ZINC PLATED CLEAR CHROMATE; BUTTON: 303 STAINLESS STEEL;
 CAP SCREW, NUT, AND BUSHING: 300-SERIES STAINLESS STEEL; SPRING: 302 STAINLESS STEEL; BALLS: 440C STAINLESS STEEL

1

Stainless Steel

A single-acting ball lock pin with a solid, one-piece body and four balls for high tension loads. Sturdy forged shackle for heavy lifting. Shank diameters from 1/4 to 1" are available, in several standard lengths. INFO+: See safety precautions on page 74.

BALL LOCK RECEIVER CAPS

300+ SERIES STAINLESS STEEL, PASSIVATED

1

Receiver Caps are ideal for securing Ball Lock Pins used in clevis applications, especially when the through-hole has excess clearance. The Receiver Cap's inside diameter fits the Ball Lock Pin exactly, and is stepped to provide a perfect locking surface for the balls. Available to fit Ball Lock Pin diameters from 3/16 to 1" (5 to 20mm in metric). Made of 300-series stainless steel. Please note, using a Receiver Cap reduces the Ball Lock Pin's effective grip length slightly (see D dimension).

Receiver Caps are tapped to allow fastening the eyelet end of a standard Ball Lock Pin Cable Assembly (12" long) or Nylon Lanyard (10" long), and include a fastening screw.

DETENT PINS

SHANK & HEAD: 300-SERIES STAINLESS STEEL, PASSIVATED; SPRING & RING: 302 STAINLESS STEEL; BALLS: 440C STAINLESS STEEL

1

Solid alignment pin with spring-loaded locking balls (not positive locking like a Ball Lock Pin). Simply push pin to insert, and pull to remove. Available in steel or stainless steel. Standard shank diameters from 3/16 to 1" (6 to 20mm in metric). Note: 3/16-diameter pins have one ball, instead of two, due to their small size. Any grip length up to 6" (150mm in metric) is available as a standard, at no extra charge. Available from stock in many standard grip lengths, or quickly made to order in custom lengths and diameters.

Optional Cable

The optional attached Cable Assembly (-C) is 12" long (part no. CL-82-KA-12.0 if ordered separately), while the optional attached Nylon Lanyard (-NL) is 10" long (part no. CL-1-NL-10 if ordered separately). Both have an eyelet at the free end for a #10 or M5 attachment screw.

Ordering Example (INCH):

CL - 4 - DEP - 1.50 - S - C
 Diameter (16ths of an inch) | Grip length (inches) | Add -C for attached Cable Assembly or -NL for attached Nylon Lanyard

Ordering Example (Metric):

CLM - 6 - DEP - 50 - S - C
 Add M for metric | Diameter (mm) | Grip length (mm) | Add -C for attached Cable Assembly or -NL for attached Nylon Lanyard

MARINE DETENT PINS

SHANK: 316 STAINLESS STEEL
 RING: 316 OR 300-SERIES STAINLESS STEEL
 SPRING & BALLS: 316 STAINLESS STEEL

Marine Detent Pins are made of 316 stainless steel for extra corrosion resistance. Economical quick-release alignment pin with a solid shank and spring-loaded locking balls. This type of Detent Pin has a ring instead of a solid shoulder, for applications where exact grip length is not important. Locking balls hold the pin in place by spring force (not positive locking like a Ball Lock Pin). Simply push the pin to insert, and pull to remove. Available in standard pin diameters from 3/16 to 1/2", in stainless steel only. Note: 3/16" pins have only one locking ball instead of two due to their small size. Available from stock in many standard grip lengths, with other grip lengths available as specials. Optionally available with an attached Cable Assembly (-C) or an attached Nylon Lanyard (-NL).

1

Ordering Example (INCH):

CL-4- MDP -1.50 -S - C

Diameter (16ths of an inch) ————
 Grip length (inches) ————
 Add -C for attached Cable Assembly
 or -NL for attached Nylon Lanyard

ECONOMY DETENT PINS

SHANK: MILD STEEL, ZINC PLATED CLEAR CHROMATE
 RING: STEEL SPRING WIRE, ZINC PLATED CLEAR CHROMATE
 SPRING & BALLS: STEEL

Economical quick-release alignment pin with a solid steel shank and one spring-loaded locking ball. This type of Detent Pin has a ring instead of a solid shoulder, for applications where exact grip length is not important. Locking ball holds the pin in place by spring force (not positive locking like a Ball Lock Pin). Simply push the pin to insert, and pull to remove. Available in standard pin diameters 3/16", 1/4", 5/16", and 1/2", in the standard grip lengths listed below. Optionally available with an attached Cable Assembly (-C) or an attached Nylon Lanyard (-NL). For other diameters and grip lengths, see above for Marine Detent Pins (the stainless steel version of this pin).

THREADED DETENT PINS

SHANK: 300-SERIES STAINLESS STEEL
 SPRING: 17-7PH OR 302 STAINLESS STEEL
 BALLS: 440C STAINLESS STEEL

1

Threaded Detent Pins are solid alignment pins with a ground shank and a threaded end for a knob handle. Two locking balls hold the pin in place by spring force. Simply push to insert, and pull to remove. The threaded end accepts virtually any type of knob handle (order separately — available in steel, stainless steel, and several different plastics). Knob handles can be permanently secured with thread-locking adhesive if desired. Threaded Detent Pins are available in stainless steel only. Standard shank diameters from 3/16 to 1/2" (6 to 10mm in metric), each in a choice of many standard grip lengths. Note: 3/16-diameter pins have only one locking ball instead of two due to their small size. Available from stock only in the standard grip lengths listed (other grip lengths available as specials).

INFO+: For a wide selection of knob handles to fit these Threaded Detent Pins, see pages 152-159.

EXPANDING PINS

SPLIT BUSHINGS, MALE SEGMENTS, & SPACERS: 17-4PH STAINLESS STEEL, RC 40 MIN, PASSIVATED, DRY FILM LUBE
 CENTER SPINDLE: 17-4PH STAINLESS STEEL, RC 36-40, PASSIVATED, DRY FILM LUBE
 BARREL NUT & WASHER: 17-4PH STAINLESS STEEL, PASSIVATED, DRY FILM LUBE
 HANDLE: ALUMINUM ALLOY, POWDER COATED

Precision alignment pin that expands up to .006 inches to tighten up hole clearance. The pin is an assembly of female split bushings separated by male segments, on a center spindle, that expands when drawn together. This assembly provides excellent shear strength, comparable to a solid pin. Diameters from 1/4 to 3/4" are available in several standard lengths. Pins can be installed in through holes or blind holes. **INFO+**: Also see page 65, for hex-head type.

Cam Handle

Moving the cam handle expands pin diameter up to .006 inches, to take up slack and secure the pin in place. If additional adjustment is required, remove set screw and turn the cam handle.

Important: Install so that all expanding bushings are contained in the installation hole.

CABLE ASSEMBLIES

INFO+: SEE PAGES 67-68 FOR MATERIAL SPECIFICATIONS

1

Cable Assemblies are ideal for attaching removable tooling components. High-strength stranded wire cable with a green nylon coating. These versatile attachment cables are available with various loops, Cable Rings, Terminals, and Cable Tabs.

Cable Assemblies are available in four cable sizes, in steel or stainless steel (#1 cable is only available in stainless steel). Stainless Cable Assemblies with Cable Rings are furnished with stainless Cable Rings. Minimum assembly length is 3.0". Length tolerance is held to $\pm 1/4"$ up to 24" long. **INFO+**: See page 69-70 for dimensions and specifications of Ferrules, Cable Rings, Terminals, and Cable Tabs. Note: These Cable Assemblies should not be used for lifting and other high-tension applications.

To order Cable Assemblies with an uncrimped ferrule (for installation), add a suffix to the part number shown on the next page:

- L for uncrimped left end
- R for uncrimped right end
- LR for both ends uncrimped

CABLE ASSEMBLIES

1

LOAD-RATED CABLE ASSEMBLIES

1

Load-Rated Cable Assemblies are ideal for applications with high pulling forces, where an extra-strong crimp is required. Please note that these cables are not designed for lifting applications, or where high impact forces occur. The high-strength stranded wire cable with a green nylon coating used for these assemblies is the same cable used for our standard cable assemblies. The difference is that Duplex Ferrules are used to achieve a stronger, precisely repeatable crimp. These ferrules require a specific crimping procedure, with a specific crimping tool and gauge to guarantee the assembly load rating. Load-Rated Cable Assemblies are available in two cable diameters, sizes #2 and #3.

CABLE

GALVANIZED STEEL OR STAINLESS STEEL, NYLON COATED (GREEN)

Cable Sizes

High-strength stranded wire cable with a green nylon coating. Choice of four cable diameters. Cable size 1 is made of stainless steel. Sizes 2, 3, and 4 are available in either galvanized steel or stainless steel. Cable is available in cut pieces (inch or mm), in bulk lengths, (feet or meters, 10 ft/ 3m minimum), or in 1000-ft rolls. Cut pieces are held to a $\pm 1/4"$ length tolerance up to 24" long. Examples:

CL-2-C-12.0 (Cut piece, #2 cable, 12" long)

FERRULES

COPPER, ELECTRO TIN PLATED

Standard

Ferrules are used to crimp a loop on the end of our nylon-coated cable. These standard round Ferrules are available in four diameters to fit our four standard cable sizes. An extra-long version is optionally available for #2 and #3 cable sizes, to allow double crimping. Ferrules may be slightly elliptical (partially crimped) at our option.

Duplex

Duplex Ferrules are used exclusively to make our Load-Rated Cable Assemblies. These ferrules require a specific crimping procedure, with a specific crimping tool and gauge to guarantee the assembly load rating. Duplex Ferrules are available in two sizes, to fit #2 and #3 cable.

STANDARD FERRULES

CRIMPING TOOLS

STEEL WITH PLASTIC HANDGRIPS

Standard

Plier tool for manually crimping ferrules on our nylon-coated cable. Crimps ferrules on either #1 or #2 cable. Heavier cable sizes require power crimping and should be ordered finish-crimped from the factory whenever possible.

STANDARD CRIMPING TOOL

HEAVY-DUTY CRIMPING TOOLS

FORGED STEEL

Heavy Duty

Heavy-Duty Crimping Tools are rugged hand tools engineered for the toughest field conditions. Manufactured from forged alloy steel with hardened working surfaces. These tools are designed to effectively crimp Duplex Ferrules by creating maximum holding around the wire, resulting in strong, reliable connections. Jaws have multiple marked pressing grooves to match the different ferrule sizes. CL-2-DF requires two crimps per ferrule, while CL-3-DF requires three crimps per ferrule.

NYLON LANYARDS

ZYTEL® HIGH-STRENGTH NYLON, BLACK

1

High-strength nylon lanyard with one eyelet end and one loop end. The eyelet end can be fastened with a screw. The loop end is supplied open – simply snap together to create a permanent assembly. Snap assembly allows on-site attachment without a crimping tool. These economical lanyards are ideal for applications where the attached item is occasionally removed, by cutting the lanyard, and replaced.

Available in one length (10" assembled). Eyelet accepts a #10 or M5 screw. A minimum pass-through diameter of 3/8" is required for attachment. Made in USA.

BALL LOCK COUPLING RINGS

PIN AND RECEIVER: 303 STAINLESS STEEL
RINGS, SPRING, AND BALLS: STAINLESS STEEL

This tiny quick-release coupling assembly incorporates a rugged, high-quality Ball Lock Pin mechanism. Allows quick, reliable connection and disconnection of items attached to a cable assembly. Simply press the button to release. One half of the coupling ring is essentially a small Ball Lock Pin with a split ring through the push button; the other half is a mating receiver, also with a split ring through it. The coupling is positive locking until released by pushing the button, which moves the center spindle forward to allow the locking balls to retract. Made of 300-series stainless steel for excellent corrosion resistance. Note: photo at left is shown actual size.

HOIST RING SAFETY PRECAUTIONS

INFO+: The following safety precautions apply to all lifting devices on pages 75, 76-90 and page 58. Also see these individual pages for additional precautions and installation guidelines.

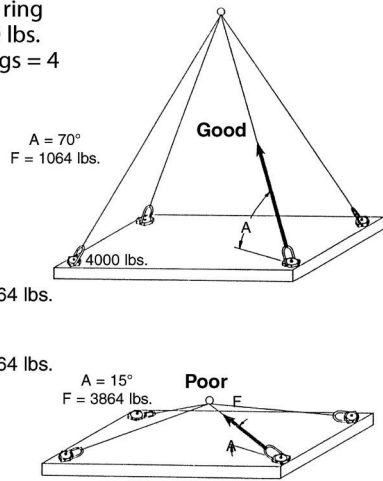

1. **IMPORTANT!** The load on each hoist ring is not simply total weight divided by the number of hoist rings. The resultant force can be significantly greater at shallow lift angles and with unevenly distributed loads. See the example below:

F = Force on each hoist ring
 W = Total weight = 4000 lbs.
 N = Number of hoist rings = 4
 A = Lifting angle

$$F = \frac{W}{N \sin A}$$

If A = 70°, F = $\frac{4000}{4 \sin 70^\circ} = 1064$ lbs.

If A = 15°, F = $\frac{4000}{4 \sin 15^\circ} = 3864$ lbs.

2. Despite the 5:1 safety factor on hoist rings, never exceed the rated load capacity. This safety margin is needed in case of misuse, which could drastically lower load capacity.

3. Tensile strength of parent material should be above 80,000 psi to achieve full load rating. For weaker material, consider through-hole mounting with a nut and washer on the other side.

4. Do not allow hoist rings to bind. Use a spreader bar, if necessary, to avoid binding.

5. Do not use spacers between the hoist ring and the mounting surface.

6. Mounting surface must be flat and smooth for full contact under hoist ring. Tapped mounting holes must be perpendicular to the mounting surface.

7. Tighten mounting screws to the torque recommended. Periodically check torque because screws could loosen in extended service. For hoist rings not furnished with screws, mount using only high-quality socket-head cap screws.

8. Never lift with a hook or other device that could deform the lifting ring.

9. Do not apply shock loads. Always lift gradually. Repeat magnaflux testing if shock loading ever occurs.

10. After installation, check that ring rotates and pivots freely in all directions.

HOIST RINGS

2

TYPES

SWIVEL HOIST RINGS

The original, patented safety-engineered Hoist Ring, and the only one that has a production sample destructively pull tested to guarantee each production run meets or exceeds the 5:1 safety factor. Pivots 180 degrees and swivels 360 degrees simultaneously to allow lifting from any direction. Black oxide finish is standard, with cadmium plating available as a special. Also available in 300-series stainless steel, with a load rating equal to 50% of the steel version. Heavy duty versions are available in capacities up to 250,000 lbs. Some varieties available electroless nickel plated, for a less-hazardous corrosion-resistant finish. Made in USA. **INFO+:** Pages 76-83.

SIDE-PULL HOIST RINGS

Required for side mounting. Flip and turn loads without unhooking (use with a spreader bar). Forged alloy-steel ring pivots 180 degrees and swivels 360 degrees simultaneously to allow lifting from any direction. Large, weldless forged ring can accommodate larger lifting hooks. Meets OSHA standards and military specifications MIL-STD-209J and MIL-STD-1365(11). Safety factor = 5:1. Made in USA. **INFO+:** Pages 86-87.

PIVOTING HOIST RINGS

An economical lifting device ideal for permanent installation. Also has a low profile and high load capacity. Forged base and solid-loop forged ring. Pivots a full 180 degrees, but does not rotate. Safety factor = 5:1. Made in USA. **INFO+:** Page 88.

LIFTING EYES

Forged steel eyebolts with an integral shoulder for greater strength. These simple, economical products are suitable for vertical lifting in-line with the threaded bolt, such as when lifting from a single point or from two points with a spreader bar. For lifting at an angle, Swivel Hoist Rings should be used instead. Manufactured and tested according to ASTM A489 and ANSI B18.15 specifications. Safety factor = 5:1. Made in USA. **INFO+:** Page 89.

HOIST EYE 360®

Hoist Eye 360® is a forged lifting eye that can be rotated 360° after installation, to align with the pulling direction. This compact assembly features a specially designed shoulder bolt, which rotates freely in the precisely machined lifting-eye body and is held captive by a retaining ring. Unlike conventional lifting eyes, Hoist Eye 360® can be used at full rated load capacity when pulling at any angle 0 to 90° from the bolt axis. Safety factor = 5:1. Made in USA. **INFO+:** Page 90.

MATERIALS

STEEL

Alloy steel, heat treated, black oxide finish (cadmium plating available as a special). Every production lot of swivel Hoist Rings is subjected to testing, including the industry's most rigorous pull testing. We destructively pull test every production lot to ensure that they meet or exceed our 5:1 safety factor.

STAINLESS STEEL

The stainless steel version of our original, patented safety-engineered hoist ring comes with a load rating equal to 50% of the steel version. Useful for corrosive, cryogenic, or elevated-temperature environments.

NICKEL-PLATED STEEL

Alloy-steel Swivel Hoist Rings are available with electroless nickel plating. This optional finish offers excellent corrosion and wear resistance while still providing the full load capacity of our heat-treated alloy-steel hoist rings.

All hoist rings are made in the USA, and available DFARS and RoHS compliant.

SWIVEL HOIST RINGS

ALLOY STEEL, HEAT TREATED, BLACK OXIDE FINISH, 100% MAGNAFLUX INSPECTED

2

The original safety-engineered hoist ring. Pivots 180 degrees and swivels 360 degrees simultaneously to allow lifting from any direction. Safety factor = 5:1. Black oxide finish is standard, with cadmium plating available as a special (add -C to part number). Swivel Hoist Rings are also available in 300-series stainless steel, with a load rating equal to 50% of the steel version. **Patent no. 3,297,293 and 4,705,422.**

Fasten hoist rings using the installation torque specified in the dimension table. Always install so that the hoist ring can pivot and swivel freely. Some hoist rings are available with a choice of bolt lengths. Use the shortest bolt length only for steel plates, the other lengths for weaker materials and for through-hole mounting with a washer and nut. **INFO+:** See general Hoist Ring Safety Precautions on page 74.

NICKEL-PLATED SWIVEL HOIST RINGS

ALLOY STEEL, HEAT TREATED, ELECTROLESS NICKEL PLATED, 100% MAGNAFLUX INSPECTED

2

Nickel Plated

Our original alloy-steel Swivel Hoist Rings are now available with electroless nickel plating. These hoist rings offer excellent corrosion and wear resistance while still providing the full load capacity of our heat-treated alloy-steel hoist rings. Electroless nickel is a hard, uniform coating that is very resistant to a wide range of chemicals, which makes these hoist rings suitable for many corrosive and marine environments. Swivel Hoist Rings pivot 180 degrees and swivel 360 degrees simultaneously to allow lifting from any direction. Safety factor = 5:1. **Patent no. 3,297,293 and 4,705,422.**

Fasten hoist rings using the installation torque specified in the dimension table. Always install so that the hoist ring can pivot and swivel freely. Some hoist rings are available with a choice of bolt lengths. Use the shortest bolt length only for steel plates, the other lengths for weaker materials and for through-hole mounting with a washer and nut. **INFO+:** See general Hoist Ring Safety Precautions on page 74.

STAINLESS SWIVEL HOIST RINGS

300-SERIES STAINLESS STEEL, PASSIVATED, 100% LIQUID-PENETRANT INSPECTED

Stainless Steel

Stainless steel version of our original safety-engineered hoist ring, with a load rating equal to 50% of the alloy steel version. Useful for corrosive, cryogenic, or elevated-temperature environments. Pivots 180 degrees and swivels 360 degrees simultaneously to allow lifting from any direction. Safety factor = 5:1. **Patent no. 3,297,293 and 4,705,422.**

Fasten hoist rings using the installation torque specified in the dimension table. Always install so that the hoist ring can pivot and swivel freely. Some hoist rings are available with a choice of bolt lengths. Use the shortest bolt length only for steel plates, the other lengths for weaker materials and for through-hole mounting with a washer and nut. **INFO+:** See general Hoist Ring Safety Precautions on page 74.

EZ-TORQUE® SWIVEL HOIST RINGS

ALLOY STEEL, HEAT TREATED, BLACK OXIDE FINISH, 100% MAGNAFLUX INSPECTED

**E-Z Torque®
Swivel Hoist Rings**

Extra-large Swivel Hoist Rings with our patented system that allows tightening several smaller bolt heads with a standard torque wrench instead of tightening one large bolt with a special tool. Swivel Hoist Rings pivot 180 degrees and swivel 360 degrees simultaneously to allow lifting from any direction. Safety factor = 5:1. Black oxide finish is standard, with cadmium plating available as a special. Available in load capacities up to 250000 lbs. **Patent no. 3,297,293, 4,705,422, and 6,199,925.** Fasten hoist rings using the installation torque specified in the dimension table. Always install so that the hoist ring can pivot and swivel freely. **INFO+:** See general Hoist Ring Safety Precautions on page 74.

HEAVY-DUTY® SWIVEL HOIST RINGS

ALLOY STEEL, HEAT TREATED, BLACK OXIDE FINISH, 100% MAGNAFLUX INSPECTED

2

The next generation of Swivel Hoist Rings, with a heavy-duty forged steel ring. Pivots 180 degrees and swivels 360 degrees simultaneously to allow lifting from any direction. Safety factor = 5:1. Meets OSHA standards and Military Specification MIL-STD-1365(11) or MIL-STD-209C. **Patent no. 4,570,987 and 4,641,986, and other patents pending.**

Fasten hoist rings using the installation torque specified in the dimension table. Always install so that the hoist ring can pivot and swivel freely. Some hoist rings are available with a choice of bolt lengths. Use the shortest bolt length only for steel plates, the other lengths for weaker materials and for through-hole mounting with a washer and nut. **INFO+:** See general Hoist Ring Safety Precautions on page 74.

SAFETY HOIST RINGS

RING: FORGED 4130 STEEL, HEAT TREATED, BLACK OXIDE FINISH, 100% MAGNAFLUX INSPECTED
 BASE: FORGED 1045 STEEL, BLACK OXIDE FINISH

Forged base rotates 360 degrees while the solid-loop forged ring pivots 180 degrees, to allow lifting from any direction. High-strength shoulder screw furnished. Safety factor = 5:1. Fasten hoist ring using the installation torque specified in the dimension table. Always install so that the hoist ring can pivot and swivel freely. **INFO+:** See general Hoist Ring Safety Precautions on page 74.

HEAVY-DUTY® SIDE-PULL HOIST RINGS

ALLOY STEEL, BLACK OXIDE FINISH, 100% MAGNAFLUX INSPECTED

2

D-Ring Type

Heavy-Duty version of our Side-Pull Hoist Rings offers greater load capacity in a given mounting-thread size. D-Ring type shown here is ideal for working with web slings. Side-Pull Hoist Rings are ideal for side mounting. Flip and turn loads without unhooking (use with a spreader bar). Forged alloy-steel ring pivots and swivels 360 degrees simultaneously to allow lifting from any direction. Safety factor = 5:1. **Patent no. 6,267,422.** Fasten hoist ring using the installation torque specified in the dimension table. Always install so that the hoist ring can pivot and swivel freely. **INFO+**: See general Hoist Ring Safety Precautions on page 74.

PIVOTING HOIST RINGS

RING: FORGED 4130 STEEL, HEAT TREATED, BLACK OXIDE FINISH, 100% MAGNAFLUX INSPECTED PER ASTM E-1444
 BASE: FORGED 1045 STEEL, BLACK OXIDE FINISH

2

Economical hoist ring with a low profile and high load capacity. Forged base and solid-loop forged ring. Pivots a full 180 degrees, but does not rotate (install so that lifting force is applied in the pivoting direction). Safety factor = 5:1. Fasten hoist ring with grade-8 Socket-Head Cap Screws, using the installation torque specified in the dimension table. The smallest three sizes have two mounting holes, the largest two sizes have four. **INFO+**: See general Hoist Ring Safety Precautions on page 74.

Install hoist rings so that lifting force is applied in the pivoting direction.

BAD

GOOD

Do not allow hoist rings to bind. Use a spreader bar, if necessary, to avoid binding.

LIFTING EYES

STEEL: FORGED CARBON STEEL, QUENCHED AND DRAWN, PLAIN FINISH
 STAINLESS STEEL: FORGED 316 STAINLESS STEEL, PASSIVATED AND ELECTROPOLISHED

Angular lifting at up to 45° is allowable in this direction (plane of the eye) but load rating is reduced.

Lifting Eyes are forged steel eyebolts with an integral shoulder for greater strength. These simple, economical lifting devices are suitable for vertical lifting in-line with the threaded bolt, such as when lifting from a single point or from two points with a spreader bar. For lifting at an angle, Swivel Hoist Rings should be used instead. Manufactured and tested according to ASTM A489 and ANSI B18.15 specifications. Safety factor = 5:1. Made in USA.

Lifting Eyes should be inspected before each use for possible defects and installed by a person trained in the installation of lifting devices. The tapped receiving hole should be countersunk, free of any debris, and deep enough to ensure proper shoulder seating. Firm hand tightening is recommended for installation; do not use wrenches or bars. Angular lifting should be avoided, because angular lifts significantly reduce rated capacity. Any angular loads must be radial in the plane of the eye, never at an angle to that plane. A steel washer or shim may be used under the shoulder to achieve proper eye orientation, but its thickness should not exceed one thread pitch. A washer may also be required to ensure flush seating on rough mounting surfaces.

Do not exceed rated load capacity. Maximum load rating applies to straight vertical lifting only. Lifting at an angle reduces load rating significantly – see table below for reduced load rating at 45° (this reduced rating should be used for any lift other than at 0° vertical). Do not work, stand, or crawl near the load of a Lifting Eye. Do not use a Lifting Eye to lift a load that can rotate; Swivel Hoist Rings should be used for such loads. Do not shock load Lifting Eyes; instead gradually increase lifting of the load to minimize load shock. Do not force hooks or any other fittings into the eye; they must fit freely. Do not weld or machine Lifting Eyes, or perform any repair. Do not expose Lifting Eyes to extreme temperatures or environmental conditions, as this may permanently reduce load capacity. Periodic inspection of installed Lifting Eyes is highly recommended. **INFO+** Also see general Hoist Ring Safety Precautions on page 74.

HOIST EYE 360°

BODY: HIGH-STRENGTH FORGED ALLOY STEEL, HIGH-VISIBILITY POWDER-COAT FINISH
 BOLT: HIGH-STRENGTH ALLOY STEEL, CORROSION-RESISTANT PLATING
 RETAINING RING: SPRING STEEL

2

These unique lifting-eye assemblies can be rotated freely after installation, to align with the pulling direction.

New item!

Hoist Eye 360° is a forged lifting eye that can be rotated 360° after installation, to align with the pulling direction. This compact assembly features a specially designed shoulder bolt, which rotates freely in the precisely machined lifting-eye body and is held captive by a retaining ring. Unlike conventional lifting eyes, Hoist Eye 360° can be used at full rated load capacity when pulling at any angle 0 to 90° from the bolt axis. Available with thread sizes from 3/8-16 to 1"-8. Complies with ASME B30.26 specifications. 200% proof load tested and individually serialized. Safety factor = 5:1. Made in USA.

Please note, Hoist Eye 360° is suitable only for applications where all lifting-eye rotation takes place before lifting begins, with no swivel action occurring while under load. For applications that require swiveling under load, use a Swivel Hoist Ring instead. An installation key is provided to allow firm tightening by hand, which is allowable for one-time temporary lifting. For permanent installation, tighten by hex wrench to the installation torque listed in the tables below.

HOIST RING ACCESSORIES

Forged Anchor Shackles

High-strength forged alloy-steel anchor shackle. Supplied with thin-head bolt and nut with cotter pin. Meets Federal Specification RR-C 271D, Type IVA, Grade A, Class 3. Safety factor = 6:1. Heat treated with black oxide finish. INFO+: See general Hoist Ring Safety Precautions on page 74.

HOIST RINGS

2

AVAILABLE EXCLUSIVELY ONLINE AT WWW.CARRLANE.COM

The following hoist ring selections may be found online in the product catalog at carrlane.com

FORGED ROAD-PLATE SWIVEL HOIST RINGS*

These hoist rings have a shorter, larger-diameter bolt, ideal for lifting heavy plates. **Patent no. 4,570,987, no. 4,641,986, no. 5,405,210** and others pending.

FORGED BAR-TITE™ SWIVEL HOIST RINGS*

These hoist rings have a steel bar knob for tightening with a level bar instead of a wrench. **Patent no. 4,570,987, no. 4,641,986, no. 5,405,210** and others pending.

FORGED SPIN-N-LOK™ SWIVEL HOIST RINGS*

These hoist rings have a spoked lug nut for tightening without a wrench. **Patent no. 4,570,987, 4,641,986, 5,405,210** and other patents pending.

FORGED WELD-MOUNT SWIVEL HOIST RINGS*

These hoist rings mounted by welding. **Patent no. 4,570,987, no. 4,641,986, no. 5,405,210** and others pending.

HEAVY-DUTY SUPER-COIL™ SWIVEL HOIST RINGS*

These hoist rings are furnished with a coil bolt, and are ideal for temporary attachment to steel structures and construction material. **Patent no. 4,570,987, 4,641,986, 5,405,210, 5,732,991**, and others pending.

FORGED SWIVEL LIFT PLATES

These swivel hoist rings have a center through-hole instead of a bolt, for mounting with a custom anchoring system. **Patent no. 4,570,987, no. 4,641,986, no. 5,405,210** and others pending.

SHACKLE HOIST RINGS*

These swivel hoist rings are designed for permanent mounting on tooling and equipment. Forged alloy-steel shackle pivots 180 degrees and swivels 360 degrees simultaneously to allow lifting from any direction. **Patent no. 5,823,588.**

FAST-LOK™ PLATE LIFTING SYSTEM

Plate-lifting system with a weld-on base and totally removable shackle assembly, allowing the plate surface to remain totally free of obstructions. Patent pending. FEATURES: Fast-Lok™ Clevis, Fast-Lok™ Base, Forged Anchor Shackle, Fast-Lok™ Detent Pin.

SCISSOR-LOK™ PLATE LIFTING SYSTEM

Plate-lifting system with a weld-on base and totally removable shackle assembly, allowing the plate surface to remain total free of obstructions. Patent pending, FEATURES: Scissor-Lok™ Tool, Fast-Lok™ Base, Forged Anchor Shackle, and Fast-Lok™ Detent Pin.

UNIVERSAL LIFTING RINGS

Removable hoist rings with a forged alloy-steel shackle. Each Universal Lifting Ring fits three different thread sizes. Designed for straight vertical lifting only. **Patent no. 4,557,513.**

HAND KNOBS

EXTRUDED HAND KNOB, EXTRUDED ALUMINUM, GREEN ANODIZE

Extruded hand knob use, easy-to-grip aluminum clamping knob. Four-prong design provides a firm grip for applications requiring quick tightening and high torque. Extruded hand knobs available blank, tapped, tapped through, or reamed. Available with tapped-hole sizes from 1/4-20 to 3/4-10 (M6 to M20 in metric) and reamed hole sizes from 1/4 to 3/4 (6mm to 20mm in metric).

Hand-knob assembly with a captive, freely rotating washer to prevent marring in clamping applications. Four-prong design provides a firm grip for applications requiring quick tightening and high torque. Plain-end screw with no dogpoint. Choice of three knob sizes. Available in thread sizes from 1/4-20 to 3/4-10, most in a choice of several thread lengths.

KNOB SHOE ASSEMBLIES

HAND KNOB: EXTRUDED ALUMINUM, GREEN ANODIZE
 SCREW: 1215 STEEL, BLACK OXIDE FINISH OR ZINC PLATED CLEAR CHROMATE
 FOOT: 1215 STEEL, BLACK OXIDE FINISH OR ZINC PLATED YELLOW CHROMATE (OR DELRIN®)

This hand-knob assembly features an integral steel clamping screw with a removable swivel foot. Four-prong design provides a firm grip for applications requiring quick tightening and high torque. Choice of four knob sizes. Available in thread sizes from 1/4-20 to 3/4-10 (M6 to M20 in metric), most in a choice of several thread lengths.

Knob Shoe Assemblies use our patented left-hand-thread swivel-foot system. The ball end of the body screws into the foot for easy installation and removal. Once the ball threads pass beyond the foot threads, the foot can rotate and pivot freely (20° total angle). Foot threads are left-hand to positively prevent accidental backout during use. Delrin® feet are optional. To order with a Delrin® foot, add "N" to the part number, e.g. CL-1-KSAN. Note: Delrin® feet are not threaded – they snap on and off. INFO+: For other foot types, see Feet for Swivel Screws on page 122 (order separately).

QUICK-ACTING KNOBS

SINTERED IRON

Quick-acting four-prong knob that slides in and out of clamping position, ideal when the knob must be completely removed for loading. Tilt knob to slide in, then straighten to engage threads and tighten. To remove, loosen knob, then tilt to slide out. Four-prong design provides a firm grip for applications requiring quick tightening and high torque. For full strength, use a stud that extends slightly beyond the knob, to engage all threads.

Tilt knob to slide in and out.

Straighten knob to engage threads for clamping.

T-Handle Knobs provide maximum leverage for heavy-duty clamping. Ideal for fastening fold-down handles and stands. Available in phenolic plastic (one knob size) for a shiny polished finish, or in thermoplastic (three knob sizes) for a textured non-slip, non-glare finish. Molded-in brass insert provides superior thread strength. Non-standard thread sizes, reamed holes, molded-in studs, or special colors (thermoplastic only) are available in quantities of 500 and above.

Rotate screw 180 degrees (1/2 turn) to latch. Allows latching swing-away lids and jig plates without machining a slot.

BAR-HANDLE SCREW CLAMPS

STEEL: 1215 STEEL BODY, CARBURIZED HARDENED, BLACK OXIDE FINISH. 1215 STEEL HANDLE, BLACK OXIDE FINISH.
300-SERIES STAINLESS STEEL SPRING. STAINLESS: 300-SERIES STAINLESS STEEL.

Screw clamp with a sliding bar handle for excellent leverage. The bar can be moved to any position, for convenient tightening, and is held in place by light spring force. These screw clamps accept all standard feet for swivel screws (INFO+: see page 119 for foot dimensions and specifications). Type A and B feet are also available in Delrin®, by adding "N" to the part number (examples: CL-620-BHSAN, CL-620-BHSA-SN). Available in screw sizes from 5/16-18 to 5/8-11 (M8 to M16 in metric), each in several lengths.

3

Sliding bar can be moved to any position for convenient tightening, such as when two clamps are close to each other.

BAR-LOK QUICK-ACTING SCREW CLAMPS

1215 STEEL, CARBURIZED-HARDENED, ZINC PLATED YELLOW CHROMATE
 KNOB HANDLE: 319 ALUMINUM ALLOY

Sliding Handle

Knob Handle

Definitely the best quick-acting screw clamp available anywhere! This patented sliding-bar design works smoothly and positively – just slide the bar forward, then twist to apply force. As strong as a standard screw clamp, but much faster. Choose either a comfortable knob handle or a sliding handle for extra leverage. Available in 3/8", 1/2", and 5/8" bar sizes, each in a choice of several lengths and foot styles. Ball and foot are threaded to allow easy installation and removal, a lefthand thread to positively prevent backout when turning the screw counterclockwise. Once the threads clear during installation, the foot rotates and pivots freely (20° included angle).

With standard foot:
 CL-14-BLK
 CL-14-BLKN (Delrin®)

With small foot, add A:
 CL-14-BLKA
 CL-14-BLKAN (Delrin®)

With ball foot, add -D:
 CL-14-BLKD

With large foot, add E:
 CL-14-BLKE

BAR-LOK QUICK-ACTING SCREW CLAMPS

1215 STEEL, CARBURIZED-HARDENED, ZINC PLATED YELLOW CHROMATE
 KNOB HANDLE: 319 ALUMINUM ALLOY

3

Clockwise

Turning the clamping bar clockwise engages internal grooves in the threaded collar. Both components then turn together as a single unit to apply screw force.

Counterclockwise

Turning the clamping bar clockwise engages internal grooves in the threaded collar. Both components then turn together as a single unit to apply screw force.

Mounting Block

Versatile mounting base made especially for Bar-Lok screw clamps. Attach with two Socket-Head Cap Screws. Two sets of mounting holes allow either base mounting or through-hole wall mounting.

FEET FOR SWIVEL SCREWS

STEEL: (TYPES A, B, D, E), 1215 STEEL, ZINC PLATED YELLOW CHROMATE (BLACK OXIDE OPTIONAL)

STEEL (TYPE C): 1018 STEEL, CARBURIZED HARDENED, ZINC PLATED YELLOW CHROMATE (BLACK OXIDE OPTIONAL)

STAINLESS: 300-SERIES STAINLESS STEEL

DELRIN®: WHITE DELRIN® 500

Matching feet for the swivel-screw bodies on the opposite page. Types A, B, and D can be used with any body-thread size. Type E can be used with the largest two sizes.

Ball and foot are threaded to allow easy installation and removal, a lefthand thread to positively prevent backout when turning the screw counterclockwise. Once the threads clear during installation, the foot rotates and pivots freely (20° included angle). Note: Delrin® feet are not threaded — they snap on and off.

BALL-END THRUST SCREWS

BODY: ALLOY STEEL, BLACK OXIDE FINISH
BALL: 440C STAINLESS STEEL OR WHITE DELRIN® 500

**Rolling Ball
(Stainless Steel)**

**Rolling Ball
(Delrin)**

New item!

Ball-End Thrust Screws are heavy-duty screw clamps with a hardened stainless-steel ball contained in the end. Available with either a spherical rolling ball or a swivel ball with a flat contact surface. Both ball options are optionally available in Delrin material. These thrust screws have a large head and large hex-socket for excellent strength.

The rolling-ball version shown above is available in thread sizes from 1/4-20 to 5/8-11 (M6 to M16 in metric), each in a choice of two lengths.

**Swivel Ball with Flat
(Stainless Steel)**

**Swivel Ball with Flat
(Delrin)**

The swivel-ball version shown here is available in thread sizes from 3/8-16 to 5/8-11 (M10 to M16 in metric), each in a choice of two lengths.

KNURLED KNOBS

STEEL: 1215, CARBURIZED-HARDENED, BLACK OXIDE FINISH.
 STAINLESS STEEL: 300-SERIES, PASSIVATED

3

High-quality knurled-head knob provides a positive grip for quick finger tightening in light clamping applications. Available in steel with a black oxide finish or stainless steel.

ADJUSTABLE-TORQUE THUMB SCREWS

SCREW: 1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH

KNOB: 1215 STEEL, BLACK OXIDE FINISH

SPRING: MUSIC WIRE OR STAINLESS STEEL 302

Knurled-head thumb screw that exerts positive, repeatable force. Clockwise, the knob declutches and turns freely when you reach the desired torque. Counterclockwise, the knob locks for positive retraction. Adjustable-Torque Thumb Screws are furnished with your choice of swivel foot, and a Knurled Check Nut.

To set desired force, first remove the outer cover screw at the side of the knob, to expose the adjustment screw. Next, insert a hex wrench to turn the adjustment screw until desired torque is achieved. Reinstall the outer cover screw when finished. Torque can be adjusted from 3 to 6 inch-lbs, resulting in a contact force of 10 to 125 lbs, but these values are approximate. Force can vary +/- 30% depending on lubrication and other operating conditions.

Choice of four foot types. Adjustable-Torque Thumb Screws use our patented left-hand-thread swivel-foot system. The ball end of the body screws into the foot for easy installation and removal. Once the ball threads pass beyond the foot threads, the foot can rotate and pivot freely (20° total angle). Foot threads are left-hand to positively prevent accidental backout during use. Delrin® feet are optional for types A and B. To order with a Delrin® foot, add "N" to the part number, e.g. CL-415-TSAN. Note: Delrin® feet are not threaded – they snap on and off.

CL-6-ATK	3/8-16		10-125
CL-8-ATK	1/2-13		10-125

Knurled knob that exerts positive, repeatable force. Clockwise, the knob declutches and turns freely when you reach the desired torque. Counterclockwise, the knob locks for positive retraction. Can be used as a controlled-torque nut, or as a thumb screw by installing a custom-made screw in the tapped hole.

To set desired force, first remove the outer cover screw at the side of the knob, to expose the adjustment screw. Next, insert a hex wrench to turn the adjustment screw until desired torque is achieved. Reinstall the outer cover screw when finished. Torque can be adjusted from 3 to 6 inch-lbs, resulting in a contact force of 10 to 125 lbs, but these values are approximate. Force can vary +/- 30% depending on lubrication and other operating conditions.

CL-5-QKK	1/2-13	1			1-1/8	17/32

Quick-acting knob that slides in and out of clamping position, ideal when the knob must be completely removed for loading. Tilt knob to slide in, then straighten to engage threads and tighten. To remove, loosen knob, then tilt to slide out. For full strength, use a stud that extends slightly beyond the knob, to engage all threads.

#6-32 X 3/4 CL-406-KTK-12
 1/4-20 X 3/4 CL-436-KTK-12

Knurled head provides a positive grip for finger tightening in light clamping applications. Choice of six knob sizes. Molded-in brass insert provides superior thread strength. Also available with a molded-in clamping stud. Non-standard thread sizes, or other lengths of molded-in studs are available in quantities of 500 and above.

HAND WHEELS

CAST IRON, CHROME PLATED

**Angled-Spoke Rounded Design
Cast Iron
Chrome Plated with Polished Rim**

High-quality Hand Wheel with contemporary design. Beautiful chrome-plated finish with a polished rim. Hand Wheel is bored to the standard shaft diameter for its size, and is also tapped for a standard Solid or Revolving Handle. Order handle separately. See table below for matching rounded-design handle (stainless steel). To use without a handle, see table below to order a matching Handle Plug, for the tapped hole (chrome-plated steel).

Hand wheels up through 8" diameter have three spokes; sizes 10" and larger have five spokes. Sizes 8" and larger have a wavy inside rim for better gripping.

HAND WHEELS

ALUMINUM, GRAVITY DIE CAST

High-quality Hand Wheel with two spokes, with contemporary design. Rim is machined and highly polished on all sides. Spokes are shot blasted to a satin finish. These Hand Wheels are bored to the standard shaft diameter for their size, and are tapped for a Solid or Revolving Handle (also available without tapped hole for handle). Rim is concentric and square to the bore. Order Solid or Revolving Handle separately. Matching square-design stainless steel handles are recommended.

HAND WHEELS

300-SERIES STAINLESS STEEL

3

**Solid Square Design
Stainless Steel**

High-quality, stainless steel Hand Wheel. Contemporary square design, completely machined to a fine finish from solid 300-series stainless steel. This precision Hand Wheel is extremely strong, yet light weight. Stainless steel Hand Wheels are center drilled, and also tapped for a standard Solid or Revolving Handle. Order handle separately.

These Hand Wheels can be bored with a blind hole to hide the shaft, for an extremely attractive finished appearance.

REVOLVING HANDLES

BODY: BLACK PHENOLIC PLASTIC OR NYLON THERMOPLASTIC
 THREADED SPINDLE: MILD STEEL, ZINC PLATED CLEAR CHROMATE

**Phenolic
with Steel Body**

**Thermoplastic
with Steel Body**

Modern square-design handle with a threaded steel spindle. Revolving Handles have an internal bearing that allows the handle to remain fixed in your hand, for firm gripping while turning a Hand Wheel or crank. Threaded spindle has a hex socket for easy installation. Available in two handle materials: Black phenolic plastic (glossy smooth finish, extremely hard, electrical insulator, operating temperatures to 300°F, resistant to oils and most common chemicals) or matte black nylon thermoplastic (textured surface for secure gripping, excellent impact resistance, operating temperatures to 230°F).

Revolving Handles can be used to make custom crank handles.

FOLDABLE REVOLVING HANDLES

BODY: 300-SERIES STAINLESS STEEL. HANDLE: BLACK THERMOPLASTIC

**Thermoplastic with
Stainless Steel Body**

Unique revolving handle that can fold away when not in use. Handle is positively locked in extended position. Like other revolving handles, this foldable handle has an internal bearing that allows it to remain fixed in your hand, for firm gripping, while turning a hand wheel or crank. To allow folding, the handle must first be pulled outward, against a spring force, then moved 90°. Once folded, the handle is held in that position also by spring force.

To install handle in tapped hole, screw in as far as possible, then back off until the handle is at the desired orientation. Tighten Jam Nut to secure at that orientation.

REVOLVING BALL HANDLES

BALL KNOB: BLACK PHENOLIC PLASTIC
THREADED SPINDLE: MILD STEEL, BLACK OXIDE FINISH OR ZINC PLATED CLEAR CHROMATE

**Phenolic
with Steel Body**

Revolving handle with a ball knob made of phenolic plastic and a threaded steel spindle. This version is especially useful for hand wheels or cranks mounted horizontally with the handle used as a hand rest. Revolving Ball Handles have an internal bearing that allows the handle to remain fixed in your hand, for firm gripping. Threaded spindle has a hex socket for easy installation.

LEVER HANDLES

300-SERIES STAINLESS STEEL

3

**Single
Lever Handle**

**Triple
Lever Handle**

Fast, efficient levers that provide high torque. These attractive Lever Handles are made of 300-series stainless steel, polished to a beautiful finish. Hubs are available in single-handle or triple-handle versions, each in two sizes. Lever Handles can be totally customized by choosing Lever Bar length and Knob type.

BALANCED CRANK HANDLES

300-SERIES STAINLESS STEEL

3

**Rounded Handle
(Solid or Revolving)
Stainless Steel**

**Square Handle
(Solid or Revolving)
Stainless Steel**

High-quality, stainless steel crank handle with a beautiful polished finish. Handle is balanced for smooth operation, and so that no rotation occurs due to handle weight. The reamed center hole is cross-drilled in one wall for easy installation by pinning. Order body and handle separately, with a choice of four handle types:

INFO+:

- Rounded-design Solid Handle (page 138)
- Rounded-design Revolving Handle (page 139)
- Square-design Solid Handle (page 138)
- Square-design Revolving Handle (page 139)

Durable multi-purpose knob, suitable for many applications. Molded-in brass insert provides superior thread strength. Choice of seven ball sizes. The largest size is available with a recessed top (1-1/4" dia) for adding custom decals or inlays. Non-standard thread sizes, molded-in studs, or special colors (thermoplastic and cushion grip only) are available in quantities of 500 and above.

Choose From Three Materials

1. Phenolic plastic — glossy smooth finish, extremely hard, electrical insulator, operating temperatures to 300°F, resistant to oils and most common chemicals.
2. Thermoplastic — textured surface for improved gripping, excellent impact resistance, operating temperatures to 150°F.
3. Cushion Grip — unique plastic that feels soft to the touch, matte finish, comfortable yet rugged, excellent impact resistance, operating temperatures to 150°F, excellent gripability even when wet or oily, absorbs vibration.

**Cushion Grip —
Tapped or Cored**

Tapered handle with a knob end for secure gripping. Made from Cushion-Grip plastic, a unique material that feels soft to the touch, comfortable yet rugged. Non-slip, non-glare finish. Molded-in brass insert on the tapped version provides superior thread strength. Optionally available with a plain cored hole to press fit on a shaft. The cored hole is somewhat undersize to grip tightly on a nominal-size shaft without requiring pinning. Non-standard thread sizes, molded-in studs, or special colors are available in quantities of 500 and above.

Combination knob and tapered handle. The knob end helps prevent operator's hand from sliding off the handle.

SPRING PLUNGERS

TYPES

STANDARD

Long bearing length on plunger for smooth operation. Locking element holds the unit securely in place after installation. Install and/or adjust from either end (when using the slot at the plunger end).

SHORT

Compact, short-stroke version of our standard Spring Plungers. Self-contained plunger-and-spring device available in many sizes and forces. Locking element holds the unit securely in place after installation.

SHORT WITH EXTENDED TRAVEL

This self-contained plunger-and-spring device is available in a wide range of sizes. Locking element holds the unit securely in place after installation.

PRESS FIT

Sturdy shoulder provides a fixed seating position and positively resists detent force (installation hole can be counterbored to recess the shoulder).

SPRING PLUNGERS

TECHNICAL INFORMATION

Spring plungers are often used to lift parts after machining to make unloading easier.

Nose Extended

Spring Plungers are self-contained plunger-and-spring devices that apply force over a relatively wide range of travel. The plunger nose has a long bearing length to provide smooth, linear operation. Spring Plungers are available in a wide range of sizes and forces, most in a choice of light or heavy end force. A Spring Plunger's end force is very consistent -- beginning at the stated "initial" value, and increasing linearly (due to spring compression) through the range of travel, until it reaches the stated "final" value at maximum travel.

Most Spring Plungers have a locking element to hold it securely in place after installation. This element is a locking patch on small diameters and a nylon locking pellet on larger sizes. To obtain full holding torque on sizes with a locking pellet, countersink the installation hole to avoid cutting the pellet. Countersink at a 90° angle to a diameter 1/32" larger than the major thread diameter. Then, as you screw the plunger into its hole, the locking pellet will be compressed, no cut. The locking pellet does not apply excessive force, so it also works well in softer metals such as aluminum.

Spring Plungers are recommended only for applying straight-line force, not for sideways breakaway from a detent position. For breakaway applications, the rolling ball and short stroke of a Ball Plunger are crucial features for smooth, repeatable operation.

SHORT SPRING PLUNGERS

STEEL – BODY: 1215 STEEL, BLACK OXIDE FINISH. PLUNGER NOSE: 1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH OR ZINC PLATED CLEAR CHROMATE (OR DELRIN®). SPRING: MUSIC WIRE.

STAINLESS STEEL – BODY: 300-SERIES STAINLESS.

PLUNGER NOSE: 300-SERIES STAINLESS (OR DELRIN®). SPRING: 302 STAINLESS.

Compact, short-stroke version of our standard Spring Plungers. Self-contained plunger-and-spring device available in many sizes and forces. Locking element holds the unit securely in place after installation. Install and/or adjust from either end (when using the slot at the plunger end, install with a Plunger Wrench to avoid over-compressing the spring).

Available in thread sizes from #8-32 to 5/8-11 (M5 to M12 in metric). Choice of light or heavy force in each thread size. Available in steel, with a hardened plunger nose, or stainless steel. Optionally available with a Delrin® nose to prevent marring.

SHORT SPRING PLUNGERS WITH EXTENDED TRAVEL

STEEL – BODY: 1215 STEEL, BLACK OXIDE FINISH. PLUNGER NOSE: 1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH OR ZINC PLATED CLEAR CHROMATE (OR DELRIN®). SPRING: MUSIC WIRE
 STAINLESS STEEL – BODY: 300-SERIES STAINLESS.
 PLUNGER NOSE: 300-SERIES STAINLESS (OR DELRIN®). SPRING: 302 STAINLESS.

These Spring Plungers have the body length of a Short Spring Plunger while providing the longer stroke of a standard Spring Plunger (spring force is somewhat reduced). This self-contained plunger-and-spring device is available in a wide range of sizes. Locking element holds the unit securely in place after installation. Install and/or adjust from either end (when using the slot at the plunger end, install with a Plunger Wrench to avoid over-compressing the spring).

Nose Extended

Nose Retracted

Available in thread sizes from #8-32 to 5/8-11 (M5 to M12 in metric). Available in steel, with a hardened plunger nose, or stainless steel. Optionally available with a Delrin® nose to prevent marring.

PRESS-FIT SPRING PLUNGERS

STEEL – BODY: 1215 STEEL, BLACK OXIDE FINISH. PLUNGER NOSE: 1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH OR ZINC PLATED CLEAR CHROMATE (OR DELRIN®). SPRING: MUSIC WIRE.

STAINLESS STEEL – BODY: 300-SERIES STAINLESS. PLUNGER NOSE: 300-SERIES STAINLESS (OR DELRIN®). SPRING: 302 STAINLESS

Simple, economical spring-loaded plunger ideal for installation in softer materials, such as aluminum, wood or plastic. Sturdy shoulder provides a fixed seating position and positively resists detent force (installation hole can be counterbored to recess the shoulder). Use when a threaded hole would be impractical and/or adjustment is not required. Choice of six sizes, each in light or heavy force. Available in steel, with a hardened plunger nose, or stainless steel. Optionally available with a Delrin® nose to prevent marring.

BALL PLUNGERS

TYPES

STANDARD, STEEL BALL

Self-contained ball-and-spring device available in many sizes and forces. Locking element holds the unit securely in place after installation. Install and/or adjust from either end.

STANDARD, DELRIN® BALL

Self-contained ball-and-spring device available in many sizes and forces. Locking element holds the unit securely in place after installation. Install and/or adjust from either end.

PRESS FIT

Simple, economical spring-loaded plunger ideal for installation in softer materials, such as aluminum, wood, or plastic. Sturdy shoulder provides a fixed seating position.

SELF-RETAINING

Due to their self-retaining design, these press-fit ball plungers can be securely installed in an ordinary drilled hole. The slotted end of the thermoplastic body expands to compensate for hole tolerances up to .008" oversize.

4

TECHNICAL INFORMATION

INSTALLATION:

To obtain full locking torque, countersink the installation hole to avoid cutting the locking element. Countersink at a 90-100° angle to a diameter 1/32" larger than the major thread diameter. Then, as you screw the plunger into its hole, the locking element will be compressed, not cut. **INFO+:** See page 171 for plunger wrenches.

BREAKAWAY FORCE:

To calculate the side force needed to slide a ball plunger out of its detent hole, refer to the free-body force diagram to the left. In the diagram, S= Side force, F= End force (spring force), R= Reaction force, and A= Countersink angle. The reaction force (R) is perpendicular to the contact surface. Solving for side force (S):

$$S = \frac{F}{\tan(A/2)}$$

End force (F) depends on how far the spring will be compressed, which depends on how far away from the sliding surface the ball plunger is installed. Maximum spring compression and end force occur as the ball breaks out of its hole.

BREAKAWAY-FORCE EXAMPLE:

A CL-40-BP-3 ball plunger (1/4-20) exerts an initial force of 4 lbs, a half-way force of 8 lbs, and a final force of 12 lbs. With a 90° countersink angle and half-way compression:

$$S = \frac{8 \text{ lbs}}{\tan(90^\circ/2)} = 8 \text{ lbs}$$

$$S = \frac{8 \text{ lbs}}{\tan(120^\circ/2)} = 4.6 \text{ lbs}$$

New Self-Retaining Ball Plungers

The slotted end of the thermoplastic body expands to compensate for hole tolerances up to .008".

Due to their self-retaining design, these press-fit ball plungers can be securely installed in an ordinary drilled hole.

These plungers can be installed in a plain hole, with the shoulder exposed, or slightly counterbored for flush installation.

Self-Retaining Ball Plungers can often be installed by hand, due to the body's flexible design.

See Page 175

BALL DETENTS

440C STAINLESS STEEL, HEAT TREATED

Press-in receptacle that provides a perfect mating hole for a Ball Plunger. Hole has a 90° point for smooth detent action and reliable retention. These hardened Ball Detents resist side loads to prevent wear to the parent material. Available in sizes to fit all Ball Plungers, from #4-48 to 5/8-11 (M4 to M12 in metric).

PLUNGER WRENCHES

STEEL

Handy tool to speed up installation of Ball Plungers or Spring Plungers. Much better than using a screwdriver on the ball/nose end, because the clearance hole in the center prevents over-compressing the plunger's internal spring. Available in sizes to fit all Ball Plungers and Spring Plungers, from #4-48 to 1"-8 (M4 to M12 in metric).

BALL PLUNGERS

STAINLESS STEEL – BODY: 300-SERIES STAINLESS. BALL: WHITE DELRIN® 500. SPRING: 302 STAINLESS.
 DELRIN® – BODY: DELRIN® 500, BLACK, OR YELLOW. BALL: WHITE DELRIN® 500. SPRING: 302 STAINLESS.

Self-contained ball-and-spring device available in many sizes and forces. Available in thread sizes from #4-48 to 5/8-11 (M3 to M16 in metric). Choice of light, medium, or heavy force in most thread sizes. Available in steel, stainless steel or Delrin®, all with a 440C stainless steel ball (optionally available with a Delrin® ball). Locking element (steel and stainless only) holds the unit securely in place after installation. Install and/or adjust from either end (when using the slot at the ball end, install with a Plunger Wrench to avoid over-compressing the spring). The three smallest sizes, and all Delrin® sizes, have no slot at the ball end.

PRESS-FIT BALL PLUNGERS

STEEL – BODY: 1215 STEEL, BLACK OXIDE FINISH. BALL: 440C STAINLESS (OR DELRIN®). SPRING: MUSIC WIRE
 STAINLESS STEEL – BODY: 300-SERIES STAINLESS. BALL: 440C STAINLESS (OR DELRIN®). SPRING: 302 STAINLESS

4

Simple, economical ball plunger ideal for installation in softer materials, such as aluminum, wood or plastic. Sturdy shoulder provides a fixed seating position and positively resists detent force (installation hole can be counterbored to recess the shoulder). Use when a threaded hole would be impractical and/or adjustment is not required. Available in steel or stainless steel. Choice of six sizes, each in light or heavy force, with a stainless steel or Delrin® ball.

SELF-RETAINING BALL PLUNGERS

BODY: BLACK THERMOPLASTIC (POM)
 BALL: STAINLESS STEEL, HARDENED
 SPRING: STAINLESS STEEL

Due to their self-retaining design, these press-fit ball plungers can be securely installed in an ordinary drilled hole. The slotted end of the thermoplastic body expands to compensate for hole tolerances up to .008" oversize. Sturdy shoulder provides a fixed seating position and positively resists detent force. Installation hole can be counterbored to recess the shoulder.

4

Self-Retaining Ball Plungers can often be installed by hand, due to the body's flexible design.

These plungers can be installed in a plain hole, with the shoulder exposed, or slightly counterbored for flush installation.

Threaded Stud for Knob Handle (Locking Type)

Spring-loaded plunger that locks in retracted position. To lock, pull knob back and turn 90°. Slight taper on plunger tip for easy alignment. Available in steel or stainless steel. The threaded-stud version shown here accepts virtually any type of knob handle. Knob handles can be permanently secured with thread-locking adhesive if desired.

Pull knob to retract...

... then turn 90° in either direction to lock.

**Knob Handle
(Non-Locking Type)**

Precision indexing plunger with a attractive knob handle for convenient retraction. Threaded-body version provides adjustment and can be secured with an optional Jam Nut. High strength and durability in an extremely compact assembly. Hardened and ground plunger tip has a slight taper for easy alignment. Available in two types, locking and non-locking.

Locking type has a spring-loaded plunger that locks in retracted position. To lock, pull knurled knob back and turn 90°. Body is notched at 90° to keep the knob in its retracted position.

Non-locking type has a spring-loaded plunger that stays extended by spring force except when manually held in retracted position.

PLUNGER: MILD STEEL, CARBURIZED HARDENED, ZINC PLATED CLEAR CHROMATE
 BODY: MILD STEEL, ZINC PLATED CLEAR CHROMATE
 SPRING: SPRING STEEL

This unique, quick-release pull pin positively locks in extended position. The hand-retractable plunger tip automatically locks in the forward position unless manually disengaged by pulling the ring, rather than being held forward by spring force. Slight taper on plunger tip for easy alignment. **Patent no. 8,821,061.** Made in USA.

BALL KNOB: BLACK PHENOLIC PLASTIC WITH MOLDED-IN BRASS INSERT

**Tapered Index Plungers
Rotary Cam
Standard Mount**

Index Plungers are precision, heavy-duty assemblies with a retractable spring-loaded plunger and a matching locating bushing. Tapered Index Plungers feature a 15° taper on the plunger tip with a mating taper on the bushing. The taper makes alignment easier and also eliminates any binding during retraction. Straight Index Plungers have an entirely cylindrical plunger with a slight radius at the tip, used together with a straight bushing. A straight plunger provides slightly greater positional accuracy. Order plunger and bushing separately.

The rotary-cam version completely retracts when the handle is rotated 180°. Cam surfaces are hardened steel. The standard-mount configuration has a precision ground body with a whistle notch for orientation with a setscrew (also available with a slightly oversize unground body to allow custom grinding to size). Index Plungers are manufactured with precision working tolerances and are designed for very light interference-fit installations to avoid binding of the mechanism. Set screws with nylon tip inserts are recommended. Set screws should firmly contact the whistle notch, but not exert significant force.

Straight Index Plungers have an entirely cylindrical plunger with a slight radius at the tip, used together with a straight bushing. A straight plunger provides slightly greater positional accuracy. Order plunger and bushing separately.

The rotary-cam version completely retracts when the handle is rotated 180°. Cam surfaces are hardened steel. The flange-mount configuration shown here has a precision ground body with a flange used for orientation by fastening with two Socket-Head Cap Screws (also available with a slightly oversize unground body to allow custom grinding to size). Flange mounting is designed for installations where a cross hole for a set screw is not practical. Index plungers are manufactured with precision working tolerances and are designed for a very light interference-fit installations to avoid binding of the mechanism.

SPRING STOP BUTTONS

BODY: ALUMINUM ALLOY; SPRING: SPRING STEEL
 PLUNGER: MILD STEEL, CARBURIZED-HARDENED, ZINC PLATED CLEAR CHROMATE

4

Spring Stop Buttons are ideal for holding a workpiece against its locators until clamps are in place, and for other light clamping jobs. Choice of three sizes in each type. The smallest of the three sizes is optionally available with light spring force.

Type B
Flat Face with Tang

Designed for thin workpieces and sheets. Tang prevents sheet from sliding under plunger. Requires machining a slot in the fixture base for the tang. Large bevel on plunger makes loading easier.

TYPE B – FLAT FACE WITH TANG (STEEL)

HEAVY-DUTY SPRING STOPS

BODY: 1018 STEEL, BLACK OXIDE FINISH
 PLUNGER: 1018 STEEL, BLACK OXIDE FINISH
 SPRING: MUSIC WIRE

4

New item!

These massive spring-loaded stops are the largest and strongest of all the Spring Stop Buttons that we manufacture. Heavy-Duty Spring Stops have a large contact face and are useful for applying side force to hold a workpiece against its locators until clamps are in place. For some workholding applications, including many welding fixtures, a spring stop this strong can often be used without additional clamps. Mid-stroke spring force is approximately 100 lbs.

The large flat contact face is ideal for pushing flat-sided workpieces, with a radiused top edge to make loading easier. Heavy-Duty Spring Stops have a large-diameter plunger with a long bearing length to effectively resist loads applied to the top of the contact face. The plunger and body are both made of steel for maximum strength.

Heavy-Duty Spring Stops have a large-diameter plunger with a long bearing length to effectively resist loads applied to the top of the contact face.

SPRING LOCATING PINS

PIN: MILD STEEL, CARBURIZED-HARDENED, ZINC PLATED CLEAR CHROMATE
 SPRING: MUSIC WIRE. HOUSING: ALUMINUM

Our patented Spring Locating Pins are an extremely compact way to apply side force to a workpiece. The tapered contact pin is securely anchored in a spring base. Unit installs easily in a drilled hole. Available in five sizes, each in light, medium, or heavy force. Choice of steel, stainless steel, or Delrin® contact pin. **INFO+**: Also available with a tapped receptacle for custom contact pins. Our most popular version is shown on this page, with a durable case-hardened steel contact pin and aluminum body containing a coil spring. Protective rubber seal around contact pin keeps out chips and coolant. This type has the most travel, so it allows the most part-size variation.

SPRING LOCATING PINS

RECEPTACLE: MILD STEEL, BLACK OXIDE FINISH
 SPRING: MUSIC WIRE. HOUSING: ALUMINUM

Tapped Receptacle for Custom Pin Coil Spring

This version has a tapped receptacle for installing custom contact pins. Available in two sizes, each in light, medium, or heavy force. Dimension E is a theoretical contact height which allows F maximum travel and provides the side force listed in the table. Taller pins will have more travel and less force, while shorter pins will have less travel and more force. To achieve maximum travel, the bottom diameter of the custom pin should be approximately equal to the C dimension.

LEVELING FEET

TYPES

LEVELING FEET

High-quality, heavy-duty leveling foot with large-diameter pad. Large ball provides high load capacity with a 20° total swivel angle.

STUD LEVELING FEET

High-quality, heavy-duty leveling foot with large-diameter pad and integral stud. Stud and ball are one solid piece. Large ball provides high load capacity with a 20° total swivel angle.

JIG FEET LEVELING

Medium-duty leveling foot with removable pad. Lefthand thread in pad prevents backout while pad rotates and pivots freely.

JIG FEET LEVELING ASSEMBLIES

Complete leveling assembly includes radius-head screw, plate, and hex nut.

5

MATERIALS

STEEL

1215 steel, carburized-hardened, zinc plated yellow chromate. This material is the most economical and wear resistant choice for maximum load capacities.

STAINLESS STEEL

300-series stainless steel provides excellent resistance to rust, can be sanitized, and works well in corrosive environments. DFARS and RoHS compliant.

DELTRIN®

White Delrin® 500 is non-marking, will not rust and can be sanitized. Has the lowest load capacity of these materials.

LOAD RATINGS

JIG FEET LEVELING

SCREW: 1215 STEEL, CARBURIZED-HARDENED, ZINC PLATED YELLOW CHROMATE
FOOT: 1215 STEEL, ZINC PLATED YELLOW CHROMATE

Medium-duty leveling foot with removable pad. Lefthand thread in pad prevents backout while pad rotates and pivots freely.
Patent no. 2,531,892.

Round Grippers are replaceable inserts that provide additional holding force and/or wear resistance when installed in a fixture. Fasten from behind with a socket-head cap screw, or clamp with a setscrew on the O.D. locking flat (where provided). Grippers can be recess-mounted in a flat-bottom hole, or surface mounted to use as a rest pad. Round Grippers can also be installed in Gripper Swivel Pads and Gripper Swivel Contact Bolts.

Serrated grippers are designed to slightly penetrate the workpiece to significantly increase gripping force, rather than relying on static friction alone. The hardened-tool-steel version is the most economical and impact resistant. The carbide-tipped version is still economical and impact resistant while providing extra durability. The solid-carbide version is the most durable.

Abrasive-diamond grippers have an abrasive-diamond surface permanently fused to a hardened stainless steel pad. This abrasive surface, comparable to a 100-grit abrasive, provides significant holding force with relatively low clamping pressure and minimal surface marring. This diamond-particle surface also offers excellent wear resistance.

Bonded-urethane grippers have a urethane surface permanently bonded to a stainless steel pad. This non-marking, non-staining urethane provides excellent protection against damage to finished workpieces. The bubbled texture of the urethane surface offers firm gripping, yet allows air to escape so that no suction is created under load. Urethane also provides excellent wear resistance, and is available in three firmnesses to suit a wide variety of applications.

Serrated grippers recessed into a fixture's locating surfaces dramatically increase resistance to movement by embedding themselves in the workpiece.

Flat grippers can be used to provide additional wear resistance, or as precision rest pads. The carbide-tipped version is the most durable. The hardened-steel version is the most economical and impact resistant. The hardened-stainless-steel version provides high strength and excellent corrosion resistance. The Delrin® version helps avoid marring finished workpieces.

Round Grippers can be fastened from behind with a Socket-Head Cap Screw. Some gripper types also have an O.D. locking flat for fastening with a set screw.

Square Grippers are similar to Round Grippers, but their shape is useful when positive resistance to rotation is required (they can be mounted against a step to prevent rotation). These serrated grippers are hard, replaceable inserts that provide additional holding force and/or wear resistance when installed in a fixture. They are designed to slightly penetrate the workpiece to significantly increase gripping force, rather than relying on static friction alone. The hardened-tool-steel version is the most economical and impact resistant. The carbide-tipped version is still economical and impact resistant while providing extra durability. The solid-carbide version is the most durable.

Square Grippers can be mounted against a step for positive resistance to rotation.

EDGE GRIPPERS

M-2 TOOL STEEL, HEAT TREATED RC 60-62, BLACK OXIDE FINISH

**Serrated
Hardened Tool Steel**

Edge Grippers are ideal for mounting at the top edge of a clamping face such as a vise jaw.

Edge Grippers are helpful for applications where traditional face-mounted grippers are difficult to install. They have a useful flat profile because the mounting screw is parallel to the serrated face. These serrated grippers are hard, replaceable inserts used to provide additional holding force and/or wear resistance when installed in a fixture. They are designed to slightly penetrate the workpiece to significantly increase gripping force, rather than relying on static friction alone. Edge Grippers should be mounted in a flat-bottom recess that provides support behind the gripper. Fasten with a standard socket-head cap screw (on the largest three sizes, a low-head cap screw is required). The serrated face should project 50 to 100% of serration height for maximum effectiveness (serration height is .062" on grippers with fine serrations, .047" on grippers with extra-fine serrations, and .031" on grippers with super-fine serrations).

GRIPPER CONTACT BOLTS

STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH, WITH BRAZED CARBIDE GRIPPER

**Carbide Tipped
(Serrated)**

Fully threaded contact bolt with a carbide-tipped gripper head. Can be used as an adjustable support, or as a contact bolt in a clamp. Available in thread sizes from 1/4-20 to 5/8-11 (M6 to M16 in metric) each in a choice of lengths.

GRIPPER SWIVEL CONTACT BOLTS

BODY AND GRIPPER SCREW: STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 SWIVEL BALL: 440C STAINLESS STEEL, HEAT TREATED. O-RING: RUBBER

Hardened Tool Steel (Serrated)

Carbide Tipped (Serrated)

Solid Carbide (Serrated)

Abrasive Diamond

Bonded Urethane

Carbide Tipped (Flat)

Hardened Steel or Delrin® (Flat)

Threaded contact bolt with a built-in swivel ball to hold a Round Gripper. This swivel ball, held by a retaining ring, is removable to allow installing any of the eleven different gripper types (order gripper separately). A fastening screw is furnished with the contact bolt. This screw serves as a positive stop to prevent the ball from swiveling too far. Can be used as a contact bolt, or as a support. Available in thread sizes from 3/8-16 to 1"-8 (M10 to M24 in metric), most in a choice of several lengths.

GRIPPER SWIVEL SCREWS

BODY: STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 SWIVEL BALL: HIGH-SPEED TOOL STEEL

Hardened Tool Steel (Serrated)

Hardened Tool Steel (Flat)

Screw clamp with a hardened tool steel swivel ball, either serrated or flat. A positive stop prevents the ball from swiveling too far. Serrated grippers are designed to slightly penetrate the workpiece to significantly increase gripping force, rather than relying on static friction alone. Available in thread sizes from 3/8-16 to 5/8-11 (M10 to M16 in metric) each in a choice of several lengths.

ROUND CARBIDE PADS

SOLID CARBIDE

These handy round pads are made from solid carbide for high wear resistance. Pads can be brazed or bonded to install. The bottom is slightly chamfered for clearance in a mounting bracket. Available in diameters from 1/4 to 1". Made in USA.

REST BUTTONS

TYPES

REST BUTTONS

Precision height locator with a close-tolerance shank for installation in a reamed hole. Rest Buttons are extremely useful as supports, side locator pads, and jig feet. Available in steel, stainless steel, or steel with a carbide pad.

CARBIDE-TIPPED REST BUTTONS

Precision height locator similar to the rest buttons above, but with a carbide tip for extra wear resistance.

AIR REST BUTTONS

Air Rest Buttons are used to incorporate pneumatic position control to detect proper workpiece loading in a machining fixture. These modular units consist of a threaded body installed in the fixture, which holds a precision floating plunger.

SPHERICAL RADIUS LOCATOR BUTTONS

Precision height locator with a spherical-radius head to minimize workpiece contact area. Close-tolerance shank allows press-fit installation in a reamed hole.

JIG REST BUTTONS

Precision height locator with a counterbored hole for mounting with a Socket-Head Cap Screw (not furnished). Jig Rest Buttons are extremely useful as supports, side locator pads, and jig feet.

SCREW REST PADS

Precision height locator with a threaded shank for installation in a tapped hole. Cone shape provides a small contact area in combination with a large stable base. Screw Rest Pads are extremely useful as supports, side locator pads, and jig feet.

SCREW REST BUTTONS

Threaded rest button with a hex head machined .005 to .010" over nominal height for finish grinding after installation.

SWIVEL CONTACT BOLTS

Swivel contact bolts are precision swivel balls that can be used either as a contact bolt or a rest pad. Ideal for evenly distributing clamping pressure on sloped surfaces.

DRILL JIG FEET

Precision jig foot available in four heights. Dowel in place to prevent rotation.

DOUBLE-END JIG FEET

Tapped jig foot commonly used in pairs with a stud.

JIG LEG PLATES

Precision ground pad with a large contact area. Can be used either as a jig foot, or as a rest pad for heavy workpieces. Choice of three sizes.

HEAVY-DUTY REST PADS

Large, precision rest pad for heavy-duty applications. These hardened pads have a large, durable contact surface to support heavy workpieces, or to serve as wear plates. Choice of four sizes.

HEIGHT SHIMS

Precision shims that allow raising a height locator by a small, exact amount. Ideal when supporting at different levels underneath a workpiece.

DELTRIN® REST BUTTONS

MATERIAL: WHITE DELTRIN®

Delrin® Rest Buttons are similar to our standard Rest Buttons, and Delrin® prevents marring. Rest Buttons are extremely useful as supports, side locator pads, and jig feet. Made in USA.

CARBIDE-TIPPED REST BUTTONS

BODY: 1144 STEEL, HEAT TREATED RC 40-45, BLACK OXIDE FINISH
PAD: CARBIDE

Carbide-Tipped Rest Buttons are available in many of the same diameters and heights as our standard Rest Buttons on the opposite page, so they can be used as direct replacements where additional wear resistance is desired. These rest buttons feature a thick embedded carbide pad, finish machined to a precision height. Like a standard Rest Button, these locators have a close-tolerance shank for installation in a reamed hole.

AIR REST BUTTONS

PLUNGER & BODY: 1144 STEEL, HEAT TREATED RC 40-45, BLACK OXIDE FINISH

Air Rest Buttons allow using pneumatic position control to detect proper workpiece loading in a machining fixture. These modular units consist of a threaded body installed in a fixture, which holds a precision floating plunger. This plunger has a reamed hole, available in a choice of three diameters, that accepts any height of our standard press-fit-type Rest Buttons.

Proper placement of a workpiece on the Air Rest Button assembly causes the plunger to fully retract into the body. This seals off air flow, which increases the overall pressure of the system (30 psi maximum air pressure). This pressure value can be read using an analog or digital pressure sensor which can then be tied into a PLC or control system. **Patent pending.**

After installation, the retracted plunger's top surface will be .145" above the fixture surface before a Rest Button is installed (the body's top flange is .125" thick, and the plunger protrudes .020" above the flange). If desired to achieve ultimate precision, the top surfaces of all Rest Buttons can be reground after installation of all Rest Button assemblies.

When using pneumatic position control, please consider that keeping the support surfaces reasonably clean is always important. Operations that produce fine chips or grit, such as when machining cast iron, should be avoided. The use of flood coolant, or aggressive coolant, should also be avoided.

For more information and videos, see our online catalog at carrlane.com.

SWIVEL CONTACT BOLTS

BALL: CHROME STEEL, HEAT TREATED RC 60-67
 BODY: 1144 STEEL, HEAT TREATED RC 35-40, BLACK OXIDE FINISH

Precision swivel ball that can be used as either a contact bolt or rest pad.

Swivel Contact Bolts are ideal for evenly distributing clamping pressure on sloped surfaces.

Swivel Contact Bolts are precision ground for accurate height location, even on sloped surfaces. **INFO+**: See Riser Blocks (page 432), Extension Supports (page 433), and Height Shims (page 228).

THROUGH HOLE SCREW REST BUTTON

1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH

New item!

Position sensing threaded rest button with a hex machined .005 to .01" over nominal height for finish grinding after installation. Sensor contains .06 through hole allowing air to travel through and detect whether a part is loaded utilizing a sensor. The position sensing rest button also contains a #10-32 tapped hole on the shank for installation of a threaded fitting for easy air line installation. Available in inch and metric. Made in the USA.

HEIGHT SHIMS

1010 STEEL

Precision shims that allow raising a height locator by a small, exact amount. Ideal when supporting at different levels underneath a workpiece, as in the example shown using Support Cylinders. Thickness tolerance is $\pm .0003$ on .125 size, $\pm 10\%$ on smaller sizes.

ECCENTRIC-LEVELING-LUG COVERS

MILD STEEL, BLACK OXIDE FINISH

Sturdy cover that protects an Eccentric Leveling Lug from damage or misadjustment after setting.

PART NO.	A	B
CL-1-COVER	1-7/8	5/8

MANUAL WORK SUPPORTS

BODY & PLUNGER: CARBON STEEL, CASE HARDENED, BLACK OXIDE FINISH
HANDLE: ZINC DIE CASTING, ENAMEL PAINT

Low profile allows reaching far underneath low workpieces.

Mounting slot allows stacking other components, such as this Cam Edge Clamp, on top of the support.

Spring-extended work support with an extremely low profile. Ideal for supporting in hard-to-reach places, because the handle can be positioned for convenient access. Turning the handle counterclockwise unlocks the plunger, allowing the plunger to float. Turning the handle clockwise locks the plunger. If desired, the plunger can be locked in retracted position before loading, for easier loading of light parts. The zinc die-cast Adjustable Handle can be reset to any angle for best leverage.

5

Screw Rest Pads available from 1/4" to 2" tall, are ideal fixed contact bolts to use in the support plunger.

INFO+: For adjustable contact screws, see Knurled Screw Jacks.

THROUGH-HOLE LEVELING JACKS

4140 ALLOY STEEL, ZINC PLATED BLUE PASSIVATED

Short Version

Tall Version

Clamping is achieved by tightening a bolt inserted through the workpiece and through the inside diameter of the leveling jack, after the desired level is set.

5

New item!

Through-Hole Leveling Jacks are designed for precise leveling at a desired clamping point. Clamping is achieved by tightening a bolt inserted through the workpiece and through the inside diameter of the leveling jack, after the desired level is set. The static load due to tightening the mounting bolt also securely locks the jack's rotation. These leveling jacks consist of a threaded upper sleeve and a tapered lower sleeve, with a fine thread that allows precise setting. An anti-rotation disk serves as a positive limiter for maximum height. A spanner wrench can be used for additional leverage.

The short version features an extremely low profile, higher load capacity, and a smaller height-adjustment range. The tall version provides a much greater adjustment range, while requiring additional support height and providing somewhat less load capacity. Both versions are available for 3/8", 1/2", and 5/8" bolt sizes (10, 12, and 16mm in metric).

HORIZONTAL V BLOCKS

1045 STEEL, HEAT TREATED, BLACK OXIDE FINISH

Extremely versatile locator for cylindrical workpieces. Locating surface is precision ground and accurately qualified with respect to the mounting holes. Two tapped holes in the side (standard and heavy sizes only) can be used to mount end stops or clamps. Available in two types: one for small diameters, and one for larger diameters. **INFO+**: Also see page 436 for Vertical V Blocks.

In the above example, Support Cylinders are used as end stops for shafts located in Horizontal V Blocks.

To locate a workpiece from two different diameters simultaneously, use Height Shims (**INFO+** page 423) to raise one V block to the proper level.

LOCATING PINS

TYPES

ROUND & DIAMOND PINS

Precision locating pins with a chamfered tip for easy part loading, and a shoulder to resist downward forces. Round Pins and Diamond Pins are frequently used together to locate from two holes in a workpiece, or align two pieces of a fixture, without binding.

ROUND & DIAMOND LOCATING PINS

Functionally similar to Round and Diamond Pins, except with a wider selection of head diameters (including any custom diameter from .1150" to 1.0400") and a large shoulder to resist downward forces. Frequently used together to locate from two holes in a workpiece without binding.

FLOATING LOCATING PINS

These locating pins slide in a slotted bushing to provide precise location in one axis while allowing considerable float in the perpendicular axis. Functionally similar to Diamond Pins, except that they allow greater variation in hole spacing.

BULLET-NOSE DOWELS

Precision locating pin often used with a mating bushing to align two pieces of a fixture.

BULLET-NOSE PINS

Bullet-nose round pins and diamond pins are often used together, each with a mating bushing, to align two pieces of a fixture. The pin's shank diameter and the bushing's OD are the same size, to allow boring the installation hole in both fixture pieces at the same time, for greater accuracy.

CONE-LOCATOR PINS

Medium-accuracy tapered locating pin used with a mating tapered bushing. Can be used for quick assembly of two fixture pieces.

6

TECHNICAL INFORMATION

Round Pins and Diamond Pins are frequently used together. Diamond Pins are relieved to locate only radially around the Round Pin, avoiding redundant location. This prevents binding while loading and unloading the part, yet still maintains high accuracy. The Round Pin serves as the primary, 2-axis locator, while the Diamond Pin is the secondary, 1-axis locator.

These precision locating pins have a chamfered tip for easy part loading, and a shoulder to resist downward forces – important advantages over standard dowel pins. One Round Pin and one Diamond Pin are often used together to locate from two machined holes in a workpiece, or to align two pieces of a fixture, without binding. Diamond Pins are relieved, to locate in only 1 axis. Round Pins are also extremely useful as side locators. Head and shank diameters are concentric to within .0005" TIR. Available with head diameters from 1/4 to 1" (6 to 20mm in metric).

Also available with LIFE-EX® coating!

Many sizes of Round & Diamond Pins are available with our proprietary LIFE-EX® coating. This PVD coating is very hard, abrasion resistant, and slippery, resulting in a component that has a longer lifecycle for high-production applications. This extended lifecycle allows these items to remain in production longer with less need for replacement than standard uncoated items.

Also available with LIFE-EX® coating!

Many sizes of Round & Diamond Pins are available with our proprietary LIFE-EX® coating. This PVD coating is very hard, abrasion resistant, and slippery, resulting in a component that has a longer lifecycle for high-production applications. This extended lifecycle allows these items to remain in production longer with less need for replacement than standard uncoated items.

ROUND & DIAMOND LOCATING PINS

1144 STEEL, HEAT TREATED RC 50-55, BLACK OXIDE FINISH

**Press-Fit Type
Round Pin**

**Press-Fit Type
Diamond Pin**

These precision locating pins are especially useful for workpiece location because of the wide selection of head diameters available to fit machined holes in the part. In addition to standard diameters, these pins are also quickly made to order in any special head diameter from .1150" to 1.0400" in .0001" increments. One Round Locating Pin and one Diamond Locating Pin is relieved to locate in only 1 axis. The type shown here, with a press-fit shank, is designed for permanent installation.

Round & Diamond Locating Pins are available in four standard shank diameters, each with a range of standard head diameters in 1/32" increments (2mm increments in metric), each available in either standard or undersize fit. Head and shank diameters are concentric to within .0005" TIR. Made in USA.

Special head diameters (A dimensions) are readily available in any of the four standard shank diameters:

- 5 = 5/16" shank (.1150-.3180 head dia)
- 8 = 1/2" shank (.2780-.5040 head dia)
- 12 = 3/4" shank (.4640-.7540 head dia)
- 16 = 1" shank (.7140-1.0040 head dia)

Example: For a press-fit round pin with a 1/2-inch shank and A=.4000 inches, order CL-8-RPT-.4000.

Order liner bushing and lock screws separately. See table above for proper sizes. (See drill-bushing catalog section for additional dimensions).

ROUND & DIAMOND LOCATING PINS DIN 6321

A2 TOOL STEEL, HEAT TREATED, BLACK OXIDE FINISH

In this application, a Round Locating Pin (Type B, tall version) is used together with a Diamond Locating Pin (Type C, short version) to locate from two holes in a workpiece. Using a taller round pin allows smoother loading because that pin's hole can be fully engaged first, making it easier to engage the second hole.

New item!

DIN 6321 is a system of locating pins designed for hole location, side location, and supporting. These locating pins are available in three distinct types:

- Type A Round Locating Pads are dual-purpose precision locators, with a ground top surface for use as a rest pad, and a ground head diameter for use as a locating pin.
- Type B Round Locating Pins have a ground head diameter for use as a hole locator or for side location
- Type C Diamond Locating Pins also have a ground head diameter for use as a hole locator, but are relieved to locate in only 1 axis

In this application, a Round Locating Pin (Type B) is used as a side locator, together with a Round Locating Pad (Type A) used as a rest pad.

**Round Locating Pads
DIN 6321
Type A**

Round Locating Pads per DIN 6321 Type A are dual-purpose precision locators, with a ground top surface for use as a rest pad, and a ground head diameter for use as a locating pin. These pads are especially useful as locating pins for side location of thin workpieces. Available with head diameters from 6 to 25mm.

ROUND & DIAMOND LOCATING PINS DIN 6321

A2 TOOL STEEL, HEAT TREATED, BLACK OXIDE FINISH

**Round Locating Pins
DIN 6321
Type B
(Tall and Short)**

Round Locating Pins per DIN 6321 Type B have a ground head diameter for use as a hole locator or for side location. One Round Locating Pin and one Diamond Locating Pin are often used together to locate from two machined holes in a workpiece, or to align two pieces of a fixture, without binding. Round Locating Pins are also extremely useful as side locators. Head and shank diameters are concentric to within .0005" TIR. Available with head diameters from 6 to 25mm, each in a tall and a short version.

FLOATING LOCATING PINS

BODY: TOOL STEEL, HEAT TREATED, BLACK OXIDE FINISH
 PIN: 1144 STEEL, HEAT TREATED, BLACK OXIDE FINISH

Provides precise location in one axis while allowing considerable float in the perpendicular axis. Use in conjunction with a Round Pin when loose workpiece-hole tolerances require more float than a Diamond Pin would allow. Special pin diameters (A dimensions) are available. Please contact factory.

Patent no. 3,381,554.

BULLET-NOSE PINS

1144 STEEL, HEAT TREATED RC 50-62, BLACK OXIDE FINISH

Bullet-Nose Round Pins and Diamond Pins are often used together (with matching bushings) to align two pieces of a fixture. The Diamond Pin is relieved, to locate only radially around the round pin, avoiding redundant location. This prevents binding, yet still maintains high accuracy.

The pin's shank diameter and the bushing's OD are the same size to allow boring the installation hole in both fixture pieces at the same time, for greater accuracy. The pin's head and shank diameters are concentric to within .0005 TIR. The bushing's ID and OD are concentric to within .0003 TIR.

CONE LOCATOR PINS

1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH

Pin

Bushing

Medium-accuracy tapered locating pin used with the mating bushing. These pins can be used for quick assembly of two fixture pieces, because they compensate for considerable misalignment. The pin's shank diameter and the bushing's OD are exactly the same size, to allow boring the installation hole in both fixture pieces at the same time for greater accuracy.

ON-SIZE® BUSHINGS

INVAR 36® NICKEL-IRON ALLOY

**ON-SIZE® Bushings
for Bullet-Nose Dowels
(Head Type)**

ON-SIZE® Bushings are made from Invar 36, a 36% nickel-iron alloy that has an extremely low coefficient of thermal expansion. Invar material is particularly useful in applications where minimum thermal expansion and high dimensional stability is required. Useful in high temperature applications up to 750°F (400°C), these products will maintain their size and accuracy even under heat-cool multiple cycles.

The precision bushings shown here are used with Bullet-Nose Dowels to align two pieces of a fixture. The bushing's ID and OD are concentric to within .0003" TIR. Available for pin diameters 1/4, 5/16, 3/8, and 1/2" (6, 8, 10, and 12mm in metric).

CONSTRUCTION BALLS (SHOULDER TYPE)

STEEL: 1144 STEEL, HEAT TREATED RC 54-56

New 20mm ball diameter!

Precision tooling ball used as a reference point for critical inspection, layout, and machining operations. Shoulder type has a precision height-reference shoulder to locate the ball in three dimensions. Concentricity between ball and shank is .0002" TIR. Available with ball diameters from 1/4 to 3/4" (6 to 20mm in metric), in various shank diameters and lengths.

Shoulder-Type Construction Balls provide a reference point in three dimensions.

STEP FIXTURE KEYS

MILD STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH

Adapts a key-slotted fixture or vise to machine tables with a different slot size. Available for inch or metric slots. Top and bottom of key are centered within .0005 of each other.

Step Fixture Keys are available for machine-table slots either larger or smaller than a given fixture slot. (Viewed from underside of fixture.)

SURE-LOCK™ FIXTURE KEYS

1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH

Lock in place from above or below using a hex wrench.

Perfect fixture key for most applications. Keys are interchangeable because they all fit in a 5/8 reamed hole. Allows mounting any fixture on any machine simply by switching keys. Eliminates the need to slot fixtures. Concentricity .0005 TIR or better. Available for inch or metric machine-table slots.

LOCATING KEYS

1144 OR 1045 STEEL, HEAT TREATED, BLACK OXIDE FINISH

These heavy-duty removable-type keys are our standard fixture keys for large fixture plates. Locating keys are available in two body diameters — metric (30mm) and inch (1-1/8"). These keys can be used for mounting all of our Rectangular Tooling Plates, blank and modular. Locating Keys can be inserted from above after placing the fixture plate on the machine table, to keep the top free of obstructions. If desired, Locating Keys can be removed before machining, after the fixture is fastened to the machine table. The tapped hole in the key's top surface makes insertion and removal easier. Locating flats are accurate to within .0005" true position of the body diameter.

CLAMP STRAPS

TYPES

SLOTTED-HEEL CLAMP STRAPS

Popular Clamp Strap with a slot underneath to allow sliding it straight back for clear unloading. Two drill spots on the sides provide a secure grip for retracting the clamp. Available in steel or stainless steel with several strap lengths available for each size.

SLOTTED-HEEL GOOSENECK CLAMP STRAPS

Gooseneck version of our Slotted-Heel Clamp Straps. This design recesses the clamping nut to provide a low overall profile. An indentation at the rear of each side provides a secure finger grip for retracting the clamp. Also available as a complete assembly.

SLOTTED-HEEL PADDED CLAMP STRAPS

Slotted-Heel Clamp Strap that features a replaceable clamping pad attached with two screws (furnished). Clamp Strap also easily accepts custom pads or other attachments. Read end is tapped on either side for a Finger Pin.

TAPPED-HEEL CLAMP STRAPS

Popular Clamp Strap with a tapped heel that accepts a clamping screw or rear support. Often used with a Guide Block to allow sliding the strap straight back for clear loading. Two drill spots on the sides provide a secure grip for retracting the clamp. Can also be used with a Stud Leveling Foot as a rear support.

TAPPED-HEEL PADDED CLAMP STRAPS

Tapped-Heel Clamp Strap that features a replaceable clamping pad attached with two screws (furnished). Clamp Strap also easily accepts custom pads or other attachments. Replacement pads and assemblies also available.

FORGED CLAMP STRAPS (TAPPED HEEL)

High-strength Tapped-Heel Clamp Strap available in straight or gooseneck design, with a locator nose or plain nose. Locator-nose version is ideal for workpieces with machined ends. The accurately machined notch ensures precise, repeatable clamp location for increased machining clearance.

TAPERED-NOSE CLAMP STRAPS (TAPPED HEEL)

Mini-size Tapped-Heel Clamp Strap with a tapered nose for clamping in tight spaces. Available in stainless steel. Also available as a complete assembly, where a Fixture Stud has a thread-locking interference thread at the bottom end to install permanently in a fixture plate.

WIDE-NOSE CLAMP STRAPS (TAPPED HEEL)

Mini-size Tapped-Heel Clamp Strap with an extra-wide nose. Available in stainless steel. Also available as a complete assembly, where a Fixture Stud has a thread-locking interference thread at the bottom end to install permanently in a fixture plate.

FORGED ADJUSTABLE CLAMPS

Rugged forged steel pivot clamp. Instant height adjustment without blocks or shims. One-piece assembly allows quick setups and eliminates lost clamp pieces. Clamp can swing 90° in either direction for loading clearance.

CONTINUED ON NEXT PAGE

CLAMP STRAPS

TYPES

DOUBLE-END CLAMP STRAPS

Clamp Strap with two clamping ends, for holding two workpieces simultaneously. A complete Clamp-Strap Assembly is available as well. Order pieces individually. See product page for details. Also available in metric.

DOUBLE-END GOOSENECK CLAMP STRAPS

Gooseneck version of our Double-End Clamp Straps. This design recesses the clamping nut to provide a low overall profile. Double-End Clamps have two clamping ends, for holding two workpieces simultaneously. Turn strap 90° for clear loading.

PLAIN CLAMPS

Plain Clamps are double-end, tapered-nose clamp straps that can be used for holding two workpieces simultaneously, or used with Step Blocks as a rear support for holding a single workpiece.

FORGED U CLAMPS

Open U end allows totally removing clamp strap when unclamped. Clamp tips are stepped to provide repeatable location. Cylindrical pin end minimizes contact area and is useful for clamping in horizontal holes.

STEP BLOCKS & CLAMPS

Serrated Blocks can be used individually or in pairs, as a clamp rest. Use a single block with Step Clamps, or a pair of blocks with Plain Clamps. All blocks and clamps are made from top-grade steel.

SLOTTED-HEEL CLAMP STRAPS

STEEL: 1018, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 STAINLESS STEEL: 300 SERIES

**Steel and
Stainless Steel**

Popular Clamp Strap with a slot underneath to allow sliding it straight back for clear loading. Two drill spots on the sides provide a secure grip for retracting the clamp. Available in steel for 1/4-20 (M6) to 3/4-10 (M20) stud sizes, or stainless steel for #10-32 to 3/8-16 stud sizes. Each size is available in several strap lengths.

INFO+: See page 263 for complete assemblies using these Clamp Straps.

SLOTTED-HEEL GOOSENECK CLAMP STRAPS

STRAP: ALLOY STEEL, BLACK OXIDE FINISH

INFO+: SEE PAGES 101, 311-316, 318-319, 327, 329-330 FOR OTHER MATERIAL SPECIFICATIONS

Gooseneck version of our Slotted-Heel Clamp Straps. This design recesses the clamping nut to provide a low overall profile. Slotted-Heel Clamp Straps have a slot underneath to slide straight back for clear loading. An indentation at the rear of each side provides a secure finger grip for retracting the clamp. Available to fit 1/2-13 studs (M12 in metric).

TAPPED-HEEL CLAMP STRAPS

STEEL: 1018, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 STAINLESS STEEL: 300 SERIES

**Steel and
Stainless Steel**

Popular Clamp Strap with a tapped heel that accepts a clamping screw or rear support. Often used with a Guide Block to allow sliding the strap straight back for clear loading. Two drill spots on the sides provide a secure grip for retracting the clamp. **INFO+**: Can also be used with a Stud Leveling Foot as a rear support.

Available in steel for 1/4-20 to 3/4-10 stud sizes (M6 to M20 in metric), or stainless steel for #10-32 to 3/8-16 stud sizes. Each size is available in several strap lengths.

**Gooseneck
Plain Nose**

High-strength Tapped-Heel Clamp Strap available in straight or gooseneck design, with locator nose or plain nose. Locator-nose version is ideal for workpieces with machined sides. The accurately machined notch ensures precise, repeatable clamp location for increased machining clearance.

DOUBLE-END GOOSENECK CLAMP STRAPS

STRAP: ALLOY STEEL, BLACK OXIDE FINISH

INFO+: SEE PAGES 101, 311-316, 318, 329-330 FOR OTHER MATERIAL SPECIFICATIONS

Steel

Gooseneck version of our Double-End Clamp Straps. This design recesses the clamping nut to provide a low overall profile. Double-End Clamps have two clamping ends, for holding two workpieces simultaneously. Turn strap 90° for clear loading. Available to fit 1/2-13 and 5/8-11 studs (M12 and M16 in metric).

ALUMINUM ADJUSTABLE CLAMPS

TENZALOY ALUMINUM ALLOY

Simple, economical aluminum clamp, similar in function to the Forged Adjustable Clamps.

PART NO.	STUD SIZE	CLAMPING RANGE	A	B	C	D	E
CL-8-VAC	3/8 or M10	0 to 2"	4-7/8	1-1/4	1-3/8	1	13/32
CL-10-VAC	1/2 or M12	0 to 2-1/2"	5-1/2	1-1/2	1-1/2	1-1/8	17/32

FORGED U CLAMPS

FORGED STEEL, 70,000 PSI YIELD STRENGTH, BLACK OXIDE FINISH

Open U end allows totally removing clamp strap when unclamped. Clamp tips are stepped to provide repeatable location.

Cylindrical pin end minimizes contact area and is useful for clamping in horizontal holes.

PART NO.	BOLT SIZE	A	B	C	D	E	F	G	H

STEP BLOCKS & CLAMPS

1018 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH

Step Blocks (pair)

Serrated block that can be used individually or in pairs, as a clamp rest. (One part number consists of a pair of blocks). Use a single block with Step Clamps, or a pair of blocks with Plain Clamps. All blocks and clamps are made from top-grade steel.

STEP BLOCKS (PAIR)

EDGE CLAMPS

TYPES

TINY VISE® EDGE CLAMPS

Mini edge clamps grip the side of a workpiece to keep the top clear for machining. Only Tiny Vise® Edge Clamps truly exert down thrust force on the workpiece, to prevent it from lifting. A thrust washer underneath the clamp engages a mating offset countersink to provide downward action.

TINY VISE® M-SERIES EDGE CLAMPS

Our Tiny Vise® M-Series incorporates a modular jaw design for greater adjustability. This modular system allows adjusting your workpiece engagement point by adding or removing spacers. This is useful when using the same fixture for machining a family of parts, or when workpiece size can vary somewhat between batches.

TINY VISE® LOW-PROFILE EDGE CLAMPS

Low-profile Tiny Vise® clamps are ideal for thin workpieces, and whenever downthrust action is not required. These mini edge clamps securely grip the side of a workpiece to keep the top clear for machining. Patented design. Made in USA.

TINY VISE® DOUBLE EDGE CLAMPS

Double edge clamps allow clamping two workpieces at the same time with equal force. These mini edge clamps grip the side of a workpiece to keep the top clear for machining. Patented design provides strong, reliable clamping force with the easy turn of a hex wrench.

SERRATED EDGE CLAMPS

This low-profile clamp is ideal for gripping the side of a workpiece to keep the top clear for machining. Clamps both forward and down simultaneously, by tightening the socket-head screw in the sliding nose with a hex wrench. V-groove in nose is excellent for clamping round parts of corners.

CAM EDGE CLAMPS

Pivoting-nose edge clamp operated by a cam handle for fast action. Smooth spiral cam locks positively anywhere within its 180 throw. Choice of two sizes. Available with either a standard base for fixed-position mounting, or a slotted base for adjustable mounting.

PIVOTING EDGE CLAMPS

These edge clamps are well suited for holding large castings and other tall workpieces. The pivoting jaw is actuated by a large thrust screw, exerting clamping force forward and downward at the same time. The slotted base provides adjustability.

TINY VISE® EDGE CLAMPS

BODY: 1018 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 THRUST WASHER: 1144 STEEL, HEAT TREATED, BLACK OXIDE FINISH
 FLAT-HEAD SOCKET SCREW: STEEL, BLACK OXIDE FINISH

Flat Jaw
 (Reversible, Serrated or Smooth)

Clamping force is applied by positive screw action with the easy turn of a hex wrench.

Patented design features a slotted countersink.

SERRATED JAW

SMOOTH JAW

The serrated face provides maximum gripping, while the smooth face (turn 180°) helps avoid marring finished parts.

Perfect for high-density machining! These mini edge clamps grip the side of a workpiece to keep the top clear for machining. Patented design features a slotted countersink to provide strong, reliable clamping force with the easy turn of a hex wrench. These compact clamps are ideal for fixturing multiple parts, small or large. Each clamp has both a serrated face (for maximum gripping) and a smooth face (to avoid marring finished parts). These clamps look so simple, but work amazingly well, with major advantages over earlier designs. **Patent no. 5,624,106.** Made in USA.

Clamping force is applied by positive screw action with the easy turn of a hex wrench (not with an unreliable, unsafe eccentric cam as used in other designs). A high-strength Flat-Head Socket Screw engages a mating offset countersink to exert strong clamping force. Much more durable than other designs.

Only Tiny Vise® Edge Clamps truly exert down thrust force on the workpiece, to prevent it from lifting. A thrust washer underneath the clamp engages a mating offset countersink to provide downward action.

Available in a wide range of sizes, from a miniature #8-32 thread size, up to a powerful 1"-8 thread size with 2500 lbs clamping force.

Tiny Vise® clamps are designed to provide strong clamping force when tightened by hand. Do not exceed the recommended tightening torque.

For a small amount of cutting-tool clearance, Tiny Vise® Edge Clamps can be mounted with a spacer underneath, using a longer screw. For greater clearance, clamps should be mounted into a tapped riser block fastened to the plate, to reduce bending stress on the screw.

Roll pins can be installed to keep the Tiny Vise® perfectly aligned for workpiece loading (especially helpful on horizontal machining centers).

7

TINY VISE® EDGE CLAMPS

Setup for Downthrust Force
(with Bottom Thrust Washer)

All clamps are supplied with an optional Bottom Thrust Washer (shown in black). Installing this washer under the clamp will raise the clamp slightly and provide downthrust force during clamping.

Setup for Horizontal Force
(without Bottom Thrust Washer)

If no downthrust force is required, install the clamp without the Bottom Thrust Washer. Doing so will improve clamping speed because fewer screw turns are required.

7

*Recommended torque and clamping force are at 1/3 of yield strength, leaving 2/3 of holding capacity to resist external cutting forces, etc.

TINY VISE® EDGE CLAMPS

BODY: 1018 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 THRUST WASHER: 1144 STEEL, HEAT TREATED, BLACK OXIDE FINISH
 FLAT-HEAD SOCKET SCREW: STEEL, BLACK OXIDE FINISH

Low Profile

(Reversible — Serrated or Smooth Jaw)

Compare the amazing low-profile Tiny Vise® clamp (right) with our standard Tiny Vise® clamp (left).

These low-profile clamps are ideal for thin workpieces, and whenever downthrust action is not required.

Patented design features a slotted countersink.

Clamping force is applied by positive screw action with the easy turn of a hex wrench.

Low-Profile Version!

Low-profile Tiny Vise® clamps are ideal for thin workpieces, and whenever downthrust action is not required. These mini edge clamps securely grip the side of a workpiece to keep the top clear for machining. Patented design features a slotted countersink to provide strong, reliable clamping force with the easy turn of a hex wrench. These compact clamps are ideal for fixturing multiple parts, small or large. Each clamp has both a serrated face (for maximum gripping) and a smooth face (to avoid marring finished parts). These clamps look so simple, but work amazingly well, with major advantages over earlier designs. **Patent no. 5,624,106.** Made in USA.

Clamping force is applied by positive screw action with the easy turn of a hex wrench (not with an unreliable, unsafe eccentric cam as used in other designs). A high-strength Flat-Head Socket Screw engages a mating slotted countersink to exert strong clamping force. Much more durable than other designs.

Available in a wide range of sizes, from a miniature #8-32 thread size, up to a powerful 1"-8 thread size with 2500 lbs clamping force. Tiny Vise® clamps are designed to provide strong clamping force when tightened by hand. Do not exceed the recommended tightening torque.

TINY VISE® EDGE CLAMPS

BODY: 1018 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 JAW: 1018 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH (OR DELRIN)
 THRUST WASHER: 1144 STEEL, HEAT TREATED, BLACK OXIDE FINISH
 FLAT-HEAD SOCKET SCREW: STEEL, BLACK OXIDE FINISH

Modular Jaw

Modular jaw design allows adjustment for workpiece-size variations.

These M-series clamps have a 1/4"-thick modular jaw that can be easily extended to insert or remove spacers. Up to three 1/16" spacers can be inserted to provide adjustment.

Serrated

Smooth

**Smooth
(Delrin®)**

**Carbide
Abrasive**

Choice of four modular jaw faces: 1) Serrated hardened steel, for maximum gripping bite; 2) Smooth hardened steel, to avoid marring on finished surfaces; 3) Smooth Delrin®, to further protect finished surfaces when less clamping force is required; 4) Carbide-abrasive-coated steel, for strong gripping with minimal surface penetration. Any of the four jaws can be mounted on the same body.

Patented design features a slotted countersink.

Available with a choice of jaw faces, including carbide abrasive!

Our Tiny Vise® M-series incorporates a modular jaw design for greater adjustability. This new modular system allows adjusting your workpiece engagement point by adding or removing spacers. This is useful when using the same fixture for machining a family of parts, or when workpiece size can vary somewhat between batches. Just like our original Tiny Vise®, these mini edge clamps grip the side of a workpiece to keep the top clear for machining. The patented design features a slotted countersink to provide strong, reliable clamping force with the easy turn of a hex wrench. These compact clamps are ideal for fixturing multiple parts, small or large. They look so simple, but work amazingly well! **Patent No. 10,179,393 B2.** Made in USA.

The M-series clamp body, without a jaw, is the same size as a standard Tiny Vise®— with the same reversible jaw faces (one serrated and one smooth). The 1/4"-thick serrated modular jaw mounts into the smooth face, and each spacer adds another 1/16". Up to three spacers can be inserted to provide adjustment. The modular jaw assembly is held together securely by a tough, durable O-ring, recessed in a protective groove. The modular jaw can be easily extended to insert or remove the slotted spacers.

Clamping force is applied by positive screw action with the easy turn of a hex wrench (not with an unreliable, unsafe eccentric cam as used in other designs). A high-strength Flat-Head Socket Screw engages a mating offset countersink to exert strong clamping force. Much more durable than other designs.

Clamps can be set up to apply force either at a downward angle or straight horizontally. All clamps are supplied with an optional bottom thrust washer. Installing this washer under the clamp will raise the clamp slightly and provide downthrust force during clamping. If no downthrust force is required, install the clamp without the bottom thrust washer. Doing so will improve clamping speed because fewer screw turns are required.

Available in two sizes, 5/16-18 thread size (240 lbs clamping force) and 1/2-13 thread size (800 lbs clamping force). Tiny Vise® clamps are designed to provide strong clamping force when tightened by hand. Do not exceed the recommended tightening torque.

7

TINY VISE® EDGE CLAMPS

Setup for Downthrust Force
(with Bottom Thrust Washer)

Setup for Horizontal Force
(without Bottom Thrust Washer)

All clamps are supplied with an optional Bottom Thrust Washer (shown in black). Installing this washer under the clamp will raise the clamp slightly and provide downthrust force during clamping.

If no downthrust force is required, install the clamp without the Bottom Thrust Washer. Doing so will improve clamping speed because fewer screw turns are required.

TINY VISE® DOUBLE EDGE CLAMPS

BODY: 1018 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH. SPRINGS: 302 STAINLESS STEEL
GUIDE PINS: 17 4-PH STAINLESS STEEL. THRUST WASHER: 1144 STEEL, HEAT TREATED, BLACK OXIDE FINISH
SOCKET-HEAD CAP SCREW: STEEL, BLACK OXIDE FINISH

Two Serrated Flat Jaws

Two Smooth Flat Jaws

Thrust Washers have ID clearance to enable them to float horizontally, allowing both clamping jaws to contact their workpiece simultaneously even if parts are slightly different in size. This ensures that both parts are securely clamped with equal force.

Tiny Vise® Edge Clamps are ideal for high-density machining. This quick-change Carr Lock® fixture holds 72 parts using 36 Double Edge Clamps.

Double edge clamps allow clamping two workpieces at the same time with equal force. These mini edge clamps grip the side of a workpiece to keep the top clear for machining. Patented design provides strong, reliable clamping force with the easy turn of a hex wrench. These compact clamps are ideal for fixturing multiple parts, small or large. Available with serrated jaws (for maximum gripping) or smooth jaws (to avoid marring finished parts). These clamps look so simple, but work amazingly well, with major advantages over earlier designs. **Patent no. 5,961,108.** Made in USA.

Clamping force is applied by positive screw action with the easy turn of a hex wrench (not with an unreliable, unsafe eccentric cam as used in other designs). A high-strength cap screw and Thrust Washer engage a mating offset countersink to exert strong clamping force. Much more durable than other designs.

Only Tiny Vise® Mini Edge Clamps truly exert down thrust force on the workpiece, to prevent it from lifting. A Thrust Washer underneath the clamp engages a mating offset countersink to provide downward action.

Only Tiny Vise® Double Edge Clamps compensate for size variation when clamping two workpieces. Thrust Washers have ID clearance to enable them to float horizontally, allowing both clamping jaws to contact their part simultaneously. This ensures that both parts are securely clamped with equal force.

Available in four sizes, from 5/16-18 up to a powerful 1"-8 thread size with 4500 lbs clamping force (M8 to M24 in metric).

Please note: Tiny Vise® clamps are designed to provide strong clamping force when tightened by hand. Do not exceed the recommended tightening torque. Double edge clamps should always be used to hold two workpieces, not just one; otherwise recommended torque and clamping force will be significantly reduced.

TINY VISE® DOUBLE EDGE CLAMPS

Setup for Downthrust Force
(with Bottom Thrust Washer)

All clamps are supplied with two Thrust Washers (shown in black). The Bottom Thrust Washer is optional. Installing this washer will raise the clamp slightly and provide downthrust force during clamping.

Setup for Horizontal Force
(without Bottom Thrust Washer)

If no downthrust force is required, install the clamp without the Bottom Thrust Washer. Doing so will improve clamping speed because fewer screw turns are required.

CAM EDGE CLAMPS

BODY: STEEL, WEAR SURFACES HARDENED, BLACK OXIDE FINISH
BALL HANDLE: BLACK PHENOLIC PLASTIC

Pivoting-nose edge clamp operated by a cam handle for fast action. Smooth spiral cam locks positively anywhere within its 180° throw. Choice of two sizes. Available with either a standard base for fixed-position mounting, or a slotted base for adjustable mounting. Choice of clockwise or counterclockwise handle rotation to clamp.

Nose pivots to exert clamping force forward and downward at the same time.

BODY AND NOSE: 1018 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 CLAMPING SCREW: 4140 STEEL, HEAT TREATED RC 43-45, BLACK OXIDE FINISH
 NOSE COVER: ALUMINUM

Serrated Adjustable Edge Clamp (High Nose)

Removable aluminum nose cover, furnished on high-nose version

This low-profile clamp is ideal for gripping the side of a workpiece to keep the top clear for machining. Clamps both forward and down simultaneously, by tightening the socket-head screw in the sliding nose with a hex wrench. V-groove in nose is excellent for clamping round parts or corners. Choice of five sizes, each available in several slot lengths. Slot is tapered to prevent the clamp from backing off under heavy forces. Use two mounting screws on longer clamps.

High Nose

High-nose version is best for most applications. Gripping high up on the workpiece, close to the machining plane, provides maximum clamping rigidity. A removable aluminum nose cover is furnished for clamping soft or machined parts without damage.

Low Nose

Low-nose version is ideal for thin parts, with its extra machining clearance.

ADJUSTABLE — HIGH NOSE

SERRATED EDGE CLAMPS

BODY AND NOSE: 1018 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 CLAMPING SCREW: 4140 STEEL, HEAT TREATED RC 43-45, BLACK OXIDE FINISH
 NOSE COVER: ALUMINUM

Serrated Fixed Edge Clamp (High Nose)

Serrated Fixed Edge Clamp (Low Nose)

Serrated Fixed Edge Clamps mount in a fixed position, rather than having a slot for adjustment. This makes the clamps more compact and ensures that they are mounted in the correct location without requiring adjustment. The fixed version is usually better for permanent fixtures, while the adjustable version is better for machine-table mounting. The Flat-Head Socket Screws used for mounting absolutely hold proper location (order separately). Choice of three clamp sizes, with either a high nose or low nose.

High Nose

Low Nose

Low Nose

PIVOTING EDGE CLAMPS

BODY: GRAY CAST IRON, ASTM CLASS 40, BLACK OXIDE FINISH
 JAW: 1045 STEEL, HEAT TREATED RC 40-45, BLACK OXIDE FINISH
 BOLT: 4135 STEEL, HEAT TREATED, BLACK OXIDE FINISH

Standard

Heavy

Large edge clamp that is ideal for tall workpieces. Pivoting nose pushes forward and downward simultaneously. Can be used to clamp against fixed locators, or against the Downthrust Backstops shown below. Replacement jaws are available.

Standard

PIVOTING EDGE CLAMPS

SIZE	PART NO.	MAX. CLAMPING FORCE (LBS)		SOCKET-HEAD CAP SCREWS (2 OR 4 REQD)	REPLACEMENT JAW

PIVOTING EDGE CLAMPS

BODY & JAW: 1018 STEEL, BLACK OXIDE FINISH
 EDGE GRIPPER: M-2 TOOL STEEL, HEAT TREATED Rc 60-62, BLACK OXIDE FINISH
 DOWEL PIN: 4140 ALLOY STEEL

New item!

This edge clamp is well suited for holding large castings and other tall workpieces. The pivoting jaw exerts clamping force forward and downward at the same time. The jaw has a replaceable serrated gripper made of hardened tool steel for high-production durability. The slotted base provides adjustability and has a tapered top surface to prevent the clamp from moving. Fasten with two Socket-Head Cap Screws.

PIVOTING EDGE CLAMP

PART NO.	MAXIMUM CLAMPING STROKE	MOUNTING SCREW SIZE	THRUST SCREW SIZE	BALL-END THRUST SCREW (FURNISHED)	EDGE GRIPPER (FURNISHED)
CL-100-PEC	1/2	1/2-13 or M12	1/2-20	CL-80-BTS-1.75	CL-12-EG-6

These Pivoting Edge Clamps can be easily converted to hydraulic operation by replacing the standard thrust screw with a Threaded-Body Cylinder and Feeder Cap, then connecting to a hydraulic pressure source. Please see table below for the required conversion accessories. Maximum clamping stroke is reduced to 1/4" when the clamp is converted to hydraulic operation.

HYDRAULIC CONVERSION ACCESSORIES

SWING CLAMPS

TYPES

HOOK CLAMPS – SHORT ARM

Extremely compact swing clamp that mounts in a reamed hole. Compact assembly is ideal for installation in tight spaces and where high clamping forces are required. Choice of socket head (counterbored) or hex-nut type.

HOOK CLAMPS – LONG ARM

Long-arm Hook Clamps are available with either a plain or tapped arm. The tapped-arm version accepts a wide variety of contact bolts or spindles to increase clamping-height range (the tapped arm is slightly longer). Ideal in tight spaces where high clamping force is required.

HOOK CLAMPS – CAM HANDLE

The tapped-arm version is optionally available with a cam handle, to allow clamping without a separate wrench.

ONE-TOUCH QUICK-ACTING SWING CLAMP – HORIZONTAL CAM LEVER

One-Touch Swing Clamps are manually operated clamps that first rotate 70° clockwise into position, then clamp straight down in one continuous motion. The Horizontal Cam Lever is operated by a radial cam lever that swings in an horizontal arc.

ONE-TOUCH QUICK-ACTING SWING CLAMP – VERTICAL CAM LEVER

One-Touch Swing Clamps are manually operated clamps that first rotate 70° clockwise into position, then clamp straight down in one continuous motion. The Vertical Cam Lever is operated by a radial cam lever that swings in a vertical arc. Ideal for confined spaces with no room for a horizontal handle swing.

ONE-TOUCH QUICK-ACTING SWING CLAMP – HEX DRIVE

One-Touch Swing Clamps are manually operated clamps that first rotate 70° clockwise into position, then clamp straight down in one continuous motion. The Hex Drive is operated by a screw mechanism with a hex drive nut. This allows for exact clamping-force control using a torque wrench.

FLOATING CLAMPS

Floating Clamps are position-flexible clamping devices. The top jaw and bottom jaw together provide a floating clamping point that adjusts to the workpiece before locking, to prevent deformation.

SWING CLAMP ASSEMBLIES

Long-reach swing clamp that can be hand-tightened for medium clamping force.

UP-THRUST CLAMP

Combination clamp and locator with a unique upward clamping action. Pushing down the cam handle pulls the lower jaw upward. This clamps the workpiece against the stationary upper jaw, whose bottom surface is a precision-ground locator.

HOOK-CLAMP MOUNTING BLOCKS

1018 STEEL, BLACK OXIDE FINISH

Hook-Clamp Mounting Block
(order Hook-Clamp separately)

These mounting blocks for long-arm Hook Clamps have built-in 90° stops that provide consistent arm positioning in both clamped and unclamped position. Two sets of mounting holes allow either base mounting or side mounting. Precision bored hole for smooth swing action. Available for all three sizes of long-arm Hook Clamps.

ONE-TOUCH QUICK-ACTING SWING CLAMPS

BASE, SPINDLE, AND LEVER: 1045 STEEL, HEAT TREATED, BLACK OXIDE FINISH
 CLAMPING-ARM BODY AND SPIRAL-CAM SHAFT: ALLOY STEEL, HEAT TREATED, BLACK OXIDE FINISH
 KNOB HANDLE: BLACK PHENOLIC PLASTIC

Horizontal Cam Lever

One-Touch Swing Clamps are manually operated clamps that first rotate 70° clockwise into position then clamp straight down in one continuous motion. The version shown here is operated by a radial cam lever that swings in an horizontal arc. Available in four sizes.

Starting with the clamping arm swung away for loading, turn the lever to rotate the arm into clamping position and automatically move the arm downward to apply clamping force. A small portion of the total vertical stroke is used to swing, and slightly advance the clamping arm, then the remaining stroke is available as the clamping range. To unclamp, reverse the lever movement to lift the arm straight up and automatically return the arm to its original position for loading.

Mount clamp with two socket-head cap screws using the two mounting slots. To allow for workpiece variation, adjust spindle extension so that full clamping force is achieved approximately in the middle of the lever's 100° clamping range.

1. Starting position, with clamping arm swung away for loading.
2. Turn lever (70°) to rotate the arm into clamping position.
3. Continue turning lever (through 90°) to advance the arm toward the workpiece.
4. Continue turning lever (90° to 190°) until full clamping force is applied.

ONE-TOUCH QUICK-ACTING SWING CLAMPS

BASE, WASHER, AND SPINDLE: 1045 STEEL, HEAT TREATED, BLACK OXIDE FINISH
 CLAMPING-ARM BODY AND CAM HANDLE: ALLOY STEEL, HEAT TREATED, BLACK OXIDE FINISH

**Vertical
Cam Handle**

One-Touch Swing Clamps are manually operated clamps that first rotate 70° clockwise into position then clamp straight down in one continuous motion. The version shown here is operated by a cam handle that swings in a vertical arc. Ideal for confined spaces with no room for a horizontal handle swing. Available in four sizes.

Starting with the handle upright and the clamping arm swung away for loading, first twist the handle to rotate the arm into clamping position, then push the handle downward to lower the arm and apply clamping force. A small portion of the total vertical stroke is used to swing, and slightly advance the clamping arm, then the remaining stroke is available as the clamping range. Reverse the process to unclamp and return the arm to its original position for loading.

Mount clamp with two socket-head cap screws using the two mounting slots. To allow for workpiece variation, adjust spindle extension so that full clamping force is achieved approximately in the middle of the lever's 100° clamping range.

1. Starting position, with handle upright and clamping arm swung away for loading.

2. Twist handle (70°) to rotate the arm into clamping position.

3. Push handle downward (through 45°) to advance the arm to the workpiece. Continue pushing downward (45° to 135°) until full clamping force is applied.

ONE-TOUCH QUICK-ACTING SWING CLAMPS

BASE, WASHER, SPINDLE, AND HEX DRIVE NUT: 1045 STEEL, HEAT TREATED, BLACK OXIDE FINISH
CLAMPING-ARM BODY: ALLOY STEEL, HEAT TREATED, BLACK OXIDE FINISH

Hex Drive

Starting with the clamping arm swung away for loading, tighten the flange nut to rotate the arm into clamping position and automatically move the arm downward to apply clamping force.

One-Touch Swing Clamps are manually operated clamps that first rotate 70° clockwise into position then clamp straight down in one continuous motion. The version shown here is operated by a screw mechanism with a hex drive nut. This allows for exact clamping-force control using a torque wrench. The screw mechanism also provides a longer clamping stroke and greater clamping force than the versions with cam locking. Available in four sizes.

Starting with the clamping arm swung away for loading, tighten the hex drive nut to rotate the arm into clamping position and automatically move the arm downward to apply clamping force. A small portion of the total vertical stroke is used to swing the clamping arm, then the remaining stroke is available as the clamping range. To unclamp, turn the flange nut counter-clockwise to lift the arm straight up and automatically return the arm to its original position for loading.

Mount clamp with two socket-head cap screws using the two mounting slots. To allow for workpiece variation, adjust spindle extension so that full clamping force is achieved approximately in the middle of the lever's 100° clamping range.

UP-THRUST CLAMPS

STEEL, WEAR SURFACES HARDENED, BLACK OXIDE FINISH

Up-Thrust Clamps locate off of the part's top surface and clamp up from below.

7

Combination clamp and locator with a unique upward clamping action. Pushing down the cam handle pulls the lower jaw upward. This clamps the workpiece against the stationary upper jaw, whose bottom surface is a precision-ground locator.

The lower jaw has two clamping surfaces 180° apart, one for thinner parts, the other for thicker parts. The cam handle rotates to screw the lower jaw up or down for fine adjustment.

FLOATING CLAMPS

HOUSING: ALUMINUM, ANODIZED GREEN.
 BODY: STEEL, CASE HARDENED & NITRIDED, MANGANESE PHOSPHATE TREATED AND GROUND.
 CLAMPING JAWS: STEEL, CASE HARDENED & NITRIDED, MANGANESE PHOSPHATE TREATED.

Floating Clamps are position-flexible clamping devices. The top jaw and bottom jaw together provide a floating clamping point that adjusts to the workpiece before locking, to prevent deformation. These combination clamp/supports are often used in conjunction with primary locators and clamps, providing additional support points to reduce machining vibration. Floating Clamps are especially useful for clamping forgings, ribbed or flanged castings, and other larger parts.

Install the clamp in a 1/2-13 threaded mounting hole by tightening using the body wrench flats. Adjust the height-limit stop and the swing range with the three setscrews in the green housing. When setting the height limit, consider the full range of workpiece tolerance.

To initiate clamping, push the Floating Clamp downward, then immediately swing the jaws into clamping position. The clamping jaws will automatically rise so that the bottom jaw contacts the workpiece with a light spring force. Next, tighten the top hex nut 11 ft-lbs minimum to 22 ft-lbs maximum, depending on the support load capacity desired. During the tightening process, the workpiece is clamped and simultaneously supported. Releasing is done in reverse order.

For more information and videos, see our online catalog at carrlane.com.

For custom applications, the standard upper clamping jaw supplied can be replaced by a special clamping jaw.

ID CLAMPS

BODY: 1215 STEEL, BLACK OXIDE FINISH
 CENTER SCREW: ALLOY STEEL, BLACK OXIDE FINISH
 MOUNTING SCREWS: ALLOY STEEL, BLACK OXIDE FINISH

ID Clamps expand to self-center and clamp on the inside diameter of a workpiece, leaving the outside clear for machining. Tightening the tapered center screw with a hex wrench pushes the clamping segments outward, and slightly downward, to exert force on the workpiece's internal bore. These clamps are designed to have their outside diameter finish machined by the customer to suit the bore size, because maximum diameter expansion is limited (.006 to .025", depending on the size). ID Clamps allow close mounting for multi-part machining on vertical and horizontal machining centers. Available in seven sizes to hold any inside diameter from .26" to 2.06". Made in USA.

For maximum locational accuracy, machine a recess in the fixture base to fit exactly with the clamp's close-tolerance flange diameter. Flat-head mounting screws are furnished. Please note, ID Clamps provide mostly radial clamping force; therefore the workpiece must be firmly supported underneath – by resting directly on the clamp's mounting flange, the fixture base, or fixed rest pads.

Before finish machining the clamp's outside diameter on a lathe or milling machine, expand the clamp slightly (.002 - .003") from its relaxed diameter by tightening the tapered center screw. Secure with a jam nut if necessary. Reduce the outside diameter only as much as required to achieve smooth workpiece loading, always staying within the expansion range for that clamp size.

ID CLAMPS

BODY: 1215 STEEL, BLACK OXIDE FINISH
CENTER SCREW: ALLOY STEEL, BLACK OXIDE FINISH
MOUNTING SCREWS: ALLOY STEEL, BLACK OXIDE FINISH

For maximum locational accuracy, machine a recess in the fixture base to fit exactly with the clamp's close-tolerance flange diameter. Flat-head mounting screws are furnished.

7

Each of these workpieces is clamped by two ID Clamps – a large clamp in the large bore and a small clamp in the slot. The large clamp is also the primary locator, so would be tightened first. The small clamp is also the secondary (radial or “clocking”) locator, so would be tightened second. By using ID Clamps, the workpiece’s entire outer surface is accessible for machining.

ACORN NUTS

1215 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH

FIXTURE STUDS

300-SERIES STAINLESS STEEL, PASSIVATED

Stainless Steel

Fixture Studs have a thread-locking interference thread at the bottom end to install permanently in a fixture plate. These small sizes are designed specifically for mini-size stainless steel clamp straps. Available in thread sizes from #10-32 to 3/8-16, each in a choice of several lengths.

T NUTS

STEEL: MILD STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 STAINLESS: 300-SERIES STAINLESS STEEL, PASSIVATED

Sizes for all standard machine tables. Safety-stop feature prevents breaking the machine-table slot. Threads stop one short of going through T Nut to prevent a stud from jacking the nut out of the table.

T NUT & STUD SETS

INFO+: SEE PAGES 305, 310 AND 312 FOR MATERIAL SPECIFICATIONS

40-piece set includes a complete range of stud lengths with matching T Nuts, Flange Nuts, and Coupling Nuts — all mounted in a handy wooden holder.

Set includes:

- (4) Studs of each length 3", 4", 5", 6", 7", 8", or 80, 95, 125, 150, 175, 200mm
- (6) T Nuts
- (6) Flange Nuts
- (4) Coupling Nuts
- (1) Handy Holder

T-SLOT CLEANERS

MILD STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH

This handy tool is ideal for cleaning chips and debris out of machine-table T Slots. Much safer than blowing chips out with air. Made of heat treated steel, a full .109" thick. Use for any T Slot 3/8" (10mm) and above. One end is sized for smaller T Slots, while the other end is sized for larger T Slots.

PART NO.	OVERALL LENGTH	THICKNESS
CL-1-TSCL	6	.109

ROTARY T NUTS

ALLOY STEEL, RC 40-45, BLACK OXIDE FINISH

Rotary T Nuts can be inserted into the top of a T slot, unlike normal T Nuts, which must be inserted at the end of the slot. This allows adding T Nuts and Studs anywhere for a new setup, without tearing down any existing setups. Make sure that the area where the Rotary T Nut will be inserted is clear of debris, to allow the T Nut to rotate a full 60 degrees. Same safety-stop thread feature as standard T Nuts.

SHOULDER SCREWS

ALLOY STEEL, HEAT TREATED RC 32-43, BLACK OXIDE FINISH

Precision close-tolerance Shoulder Screw. Shoulder diameter is ground to a closer tolerance than ordinary stripper bolts for better bearing action. Shoulder length is held to a plus tolerance to allow a nominal-size plate to rotate freely underneath the head.

Tiny Vise® Edge Clamps

Don't let the small size fool you!

Strong, reliable clamping ideal for fixturing multiple parts

See page 281 for more information

EYE BOLTS

STEEL: 1144, 115,000 PSI MIN. TENSILE STRENGTH, 100,000 PSI MIN. YIELD STRENGTH, BLACK OXIDE FINISH
 STAINLESS STEEL: 300 SERIES

High-strength Eye Bolt with a reamed bearing hole. High-carbon steel, fully machined from solid barstock. Also available in stainless steel. Available in other lengths and materials as a special.

CAM HANDLES

1020 STEEL, CARBURIZED-HARDENED BLACK OXIDE FINISH

Straddle-type cam handle that can be used with an Eyebolt or custom-made drawbar. Continuous-rise spiral cam locks securely in any position. Available in six inch and five metric sizes.

7

Double Cams are used with Eyebolts on Slotted-Heel Clamp Assemblies.

**Standard Blocks
Metal Holder**

**Heavy Blocks
Wooden Holder**

Economical Clamping Kit with a wide assortment of Step Clamps and Blocks. Fully machined from top-grade steel. Available with standard Step Blocks in a metal holder (for wall or machine mounting), or with wider heavy blocks in a wooden holder.

Each Kit Contains:
 (24) Studs
 (6) T-Slot Nuts
 (6) Flange Nuts
 (4) Coupling Nuts
 (6) Step Blocks
 (6) Step Clamps

DELUXE CLAMPING KITS

SEE CATALOG PAGE OF EACH COMPONENT FOR MATERIAL SPECIFICATIONS
 HOLDER: STEEL, ENAMEL PAINT

New, improved Clamping Kit with three different types of clamps. Safer and less cumbersome than sets using Step Blocks and Clamps. This 94-piece set includes:

- (12) Tapped-Heel Clamp Straps, short and long
- (4) Forged Adjustable Clamps
- (6) Serrated Edge Clamps
- (6) Stud Leveling Feet
- (6) T Nuts
- (6) Short Clamping Studs
- (6) Medium Clamping Studs
- (6) Long Clamping Studs
- (6) Spherical Nuts & Washers
- (6) Coupling Nuts
- (6) Jam Nuts
- (6) Flat Washers
- (12) Clamp Springs
- (6) Socket-Head Cap Screws
- (1) Sturdy Steel Rack

Available to fit table-slot sizes from 7/16" to 13/16" (12mm to 20mm in metric), in thread sizes from 3/8"-16 to 5/8"-11 (M10 to M16 in metric).

The Stud Leveling Feet in these kits serve as the rear supports for Tapped-Heel Clamp Straps. These leveling feet are optionally available with Delrin® pads to avoid marring the table when less clamping force is required, such as when used on coordinate measuring machines.

SWING C CLAMPS

FRAME & MOUNTING PAD: MILD STEEL, ZINC PLATED CLEAR CHROMATE

KNOB: 319 ALUMINUM ALLOY

SCREW: 1215 STEEL, NICKEL PLATED

FOOT: 1215 STEEL, ZINC PLATED YELLOW CHROMATE

7

These unique C Clamps have a hinged pad for fastening permanently to a fixture, allowing them to swing clear for workpiece loading. The hinged mounting pad bolts to the fixture with two Socket-Head Cap Screws. Four-Prong Knob provides a firm grip for applications requiring quick tightening and high torque. Clamping screw is cast securely in the knob and has a removable swivel foot. Available in four sizes.

Swing C Clamps use our patented left-hand-thread swivel-foot system. The ball end of the body screws into the foot for easy installation and removal. Once the ball threads pass beyond the foot threads, the foot can rotate and pivot freely (20° total angle). Foot threads are left-hand to positively prevent accidental black out during use. For other foot types, including Delrin® feet, see Feet for Swivel Screws (order separately).

FORGED ADJUSTABLE DRILL-PRESS CLAMPS

Handy hold-down clamp assembly that includes a Forged Adjustable Clamp, ideal for clamping on T-slotted drill presses and tapped drill-jig plates. This rugged forged steel pivot clamp provides instant height adjustment without blocks or shims. Removable brass heel protects machine table. Available with stud sizes from 5/16-18 to 1/2-13 (M8 to M12 in metric), fitting T-slots from 3/8 to 3/4 (10mm to 18mm in metric). **INFO+**: For additional sizes of Forged Adjustable Clamps, see page 277.

DRILL-PRESS TOGGLE CLAMPS

DRILL-PRESS ADAPTOR: 6061 ALUMINUM

OTHER COMPONENTS: SEE CATALOG PAGE FOR EACH SPECIFIC ITEM

These hold-down Toggle Clamps are ideal for clamping on drill presses, with an adaptor base for slotted tables and a quick adjusting spindle. Choose either a compact, easy-opening vertical T handle, or a low-profile horizontal handle. Open arm provides adjustable spindle location. Supplied with two quick-adjusting Flat-Cushion Spindles, one short and one long. Choose T Nut size to fit table slots from 3/8 to 5/8" (10 to 16mm in metric).

CARR LANE SIMPLEX HAMMERS

SEE COMPONENT PAGES FOR MATERIAL SPECIFICATIONS

Wooden Handle

Fiberglass Handle

Design your own custom hammers. These soft-face mallets can be customized for specific applications by selecting the proper hammer inserts. Choose the same type of insert for both sides, or build a multi-purpose hammer with a different type of insert for each face. The Simplex system uses a patented hammer housing with 3-point clamping that ensures a safe hammer assembly.

Available in four sizes, with a choice of eight different insert materials:

- Type A Blue Thermoplastic (Soft)
- Type B Gray Thermoplastic (Medium Soft)
- Type C Black Rubber (Medium Soft)
- Type D White Superplastic (Medium Hard)
- Type E Red Plastic (Hard)
- Type F White Nylon (Hard)
- Type G Soft Metal (Hard)
- Type H Copper (Hard) Fiberglass Handle Only

To order a 30mm hammer with a wooden handle, one black rubber insert (C) and one white nylon insert (F) specify:

CL-30-SPH-W-CF

Observe all appropriate safety precautions. Always wear safety goggles when using a hammer or any striking tool. Bystanders must also wear safety goggles. Never strike the hammer with or against another striking tool, hardened nail, or any other hard object that could cause damage. Chipping could occur, resulting in possible eye or other injury. Discard any chipped or damaged hammer. If assembling the hammer yourself, ensure that all parts are properly fitted into the handle housing and that the screw is tightened to the specified torque. Check hammer before each use. Using a hammer with loose or improperly fitted parts could result in serious injury. Use only genuine Simplex replacement components.

CARR LANE SIMPLEX HAMMERS

Type A Inserts
Blue Thermoplastic
(Soft)

Blue thermoplastic inserts are soft and non-smudging. Applications include assembly operations, dent removal, woodworking, furniture assembly, window and door construction, joiner's work, and floor tiling. Hardness 60-70 Shore A.

PART NO.	HAMMER SIZE (FACE DIA)
CL-30-SPH-A	30mm (1.18)
CL-40-SPH-A	40mm (1.57)
CL-50-SPH-A	50mm (1.96)
CL-60-SPH-A	60mm (2.36)

Type B Inserts
Grey Thermoplastic
(Medium Soft)

Gray thermoplastic inserts are medium soft and non-smudging. Applications include assembly operations, car-body work, woodworking, furniture assembly, window and door construction, joiner's work, floor tiling, paving, and interior construction. Hardness 85-95 Shore A.

PART NO.	HAMMER SIZE (FACE DIA)
CL-30-SPH-B	30mm (1.18)
CL-40-SPH-B	40mm (1.57)
CL-50-SPH-B	50mm (1.96)
CL-60-SPH-B	60mm (2.36)

Type C Inserts
Black Rubber
(Medium Soft)

Black Rubber inserts are medium soft. Applications include assembly operations, dent removal, prefabricated housing construction, carpenter's work, paving, masonry work, concrete-form setup, scaffold construction, gardening, landscaping, and interior construction. Hardness 90-100 Shore A.

PART NO.	HAMMER SIZE (FACE DIA)
CL-30-SPH-C	30mm (1.18)
CL-40-SPH-C	40mm (1.57)
CL-50-SPH-C	50mm (1.96)
CL-60-SPH-C	60mm (2.36)

Type D Inserts
White Superplastic
(Medium Hard)

White superplastic inserts (UHMW polyethylene) are medium hard, durable, impact resistant, acid and lye resistant, grease and oil resistant, and ideal for striking sharp edges. Applications include assembly operations, automotive assembly and repair work, repair and maintenance work, car body work, sheet metal working, dent removal, assembly of sharp-edged workpieces, paving, masonry work, scaffold construction, gardening, and landscaping. Hardness 60-70 Shore D.

PART NO.	HAMMER SIZE (FACE DIA)
CL-30-SPH-D	30mm (1.18)
CL-40-SPH-D	40mm (1.57)
CL-50-SPH-D	50mm (1.96)
CL-60-SPH-D	60mm (2.36)

Type E Inserts
Red Plastic
(Hard)

Red plastic inserts (cellulose acetate) are hard, semi-transparent, and grease and oil resistant. Applications include automotive assembly and repair work, sheet metal working, dent removal, concrete-form setup, and scaffold construction. Hardness 65-75 Shore D.

PART NO.	HAMMER SIZE (FACE DIA)
CL-30-SPH-E	30mm (1.18)
CL-40-SPH-E	40mm (1.57)
CL-50-SPH-E	50mm (1.96)
CL-60-SPH-E	60mm (2.36)

Type F Inserts
White Nylon
(Hard)

White nylon inserts are hard, grease and oil resistant, highly elastic, and have superior strike effectiveness. Applications include assembly operations, metalworking, tooling, automotive assembly and repair work, joining of workpieces, sheet metal working, dent removal, mold construction, assembly of sharp-edged workpieces, and scaffold construction. Hardness 68-78 Shore D.

PART NO.	HAMMER SIZE (FACE DIA)
CL-30-SPH-F	30mm (1.18)
CL-40-SPH-F	40mm (1.57)
CL-50-SPH-F	50mm (1.96)
CL-60-SPH-F	60mm (2.36)

Type G Inserts
Soft Metal
(Hard)

Soft metal inserts are made of an aluminum-copper alloy which is hard and resistant to heat. Excellent alternative to old-fashioned lead hammers, to eliminate the risk of lead contamination. Applications include metalworking, tooling, automotive assembly and repair work, straightening work, car body work, and mold construction.

PART NO.	HAMMER SIZE (FACE DIA)
CL-30-SPH-G	30mm (1.18)
CL-40-SPH-G	40mm (1.57)
CL-50-SPH-G	50mm (1.96)
CL-60-SPH-G	60mm (2.36)

Type H Inserts
Copper
(Hard)

Copper inserts are hard and provide maximum impact. Plastic socket provides for secure mounting of the copper insert in the hammer. Applications include machine construction, automotive assembly and repair work, repair and maintenance work, and vehicle service stations.

PART NO.	HAMMER SIZE (FACE DIA)
CL-30-SPH-H	30mm (1.18)
CL-40-SPH-H	40mm (1.57)

CARR LANE SIMPLEX HAMMERS

HOUSINGS: CAST IRON, FURNISHED WITH SOCKET-HEAD CAP SCREW, SPRING WASHER, AND NUT
HANDLES: EUROPEAN BLACK LOCUST WOOD, OR FIBERGLASS WITH ERGONOMIC RUBBER GRIP

Rugged cast iron housing (red), furnished with a high-strength Socket-Head Cap Screw, spring washer, and nut. Premium quality hardwood handle. Use wooden handles only with red housings.

NO-REBOUND HAMMERS

HOUSINGS: STEEL ASSEMBLY CONTAINING STEEL PELLETS. HANDLE: HICKORY WOOD.
 INSERTS: NYLON, NATURAL WHITE COLOR, HARDNESS 68-78 SHORE D

**Supercraft
Hammers
(Wooden Handle)**

No-Rebound Hammers are filled with special steel pellets that transfer momentum to the impact point.

No-Rebound Hammers deliver full impact, about 50% greater than a standard hammer. The housing is filled with special steel pellets that transfer momentum to the impact point. Ideal for assembling machine parts without damage. Speeds up work while reducing fatigue. Allows better hammer control by absorbing the bounce. Hickory-wood handle. Available in five standard sizes, plus two sledgehammer sizes.

Supercraft No-Rebound Hammers have replaceable nylon inserts. These nylon inserts are hard, grease and oil resistant, highly elastic, and have superior strike effectiveness. Applications include assembly operations, metalworking, tooling, positioning of workpieces, automotive assembly and repair work, joining of workpieces, sheet metal working, dent removal, mold construction, assembly of sharp-edged workpieces, and scaffold construction.

Observe all appropriate safety precautions. Never allow the hammer's striking faces to wear down to the point where the hammer housing makes contact with the work surface, as irreparable damage could result. Always wear safety goggles when using a hammer or any striking tool. Bystanders must also wear safety goggles. Never strike the hammer with or against another striking tool, hardened nail, or any other hard object that could cause damage. Chipping could occur, resulting in possible eye or other injury. Discard any chipped or damaged hammer.

CL-3366-081-NRH	80mm (3.14)	9	34.5	7.85	CL-3508-080-NRHI
CL-3366-107-NRH	100mm (3.93)	15	39.2	8.24	CL-3508-100-NRHI

NO-REBOUND HAMMERS

HOUSING & HANDLE: STEEL ASSEMBLY CONTAINING STEEL PELLETS
 SUPERCRAFT INSERTS: NYLON, NATURAL WHITE COLOR, HARDNESS 68-78 SHORE D
 SECURAL INSERTS: POLYURETHANE, YELLOW

**Supercraft Hammers
(Steel Handle)**

**HI-VIS
Supercraft Hammers
(Steel Handle)**

**Secural
Narrow Hammers
(Steel Handle)**

Also available in a high-visibility version!

No-Rebound Hammers deliver full impact, about 50% greater than a standard hammer. The housing is filled with special steel pellets that transfer momentum to the impact point. Ideal for assembling machine parts without damage. Speeds up work while reducing fatigue. Allows better hammer control by absorbing the bounce. Steel handle with ergonomic rubber grip.

Supercraft No-Rebound Hammers are available in four sizes, now optionally available with a high-visibility yellow fluorescent finish, ideal for locating your hammer in dim lighting conditions. Supercraft Hammers have replaceable nylon inserts. These nylon inserts are hard, grease and oil resistant, highly elastic, and have superior strike effectiveness.

Secural Narrow No-Rebound Hammers have a narrow, rectangular head that allows hammering in tight spots, and also makes storage easier in toolbox drawers. Available in one size, with a 30mm x 40mm face. Secural Narrow Hammers have replaceable polyurethane inserts. These inserts are medium soft.

Observe all appropriate safety precautions. Never allow the hammer's striking faces to wear down to the point where the hammer housing makes contact with the work surface, as irreparable damage could result. Always wear safety goggles when using a hammer or any striking tool. Bystanders must also wear safety goggles. Never strike the hammer with or against another striking tool, hardened nail, or any other hard object that could cause damage. Chipping could occur, resulting in possible eye or other injury. Discard any chipped or damaged hammer.

No-Rebound Hammers are filled with special steel pellets that transfer momentum to the impact point.

NO-REBOUND DROP HAMMERS

HOUSING: STEEL ASSEMBLY CONTAINING STEEL PELLETS
 INSERTS: NYLON, NATURAL WHITE COLOR, HARDNESS 68-78 SHORE D

No-Rebound Drop Hammers are filled with special steel pellets that transfer momentum to the impact point.

No-Rebound Drop Hammers provide the impact of a normal hammer even when access is restricted. No-Rebound Hammers deliver full impact, about 50% greater than a standard hammer. The housing is filled with special steel pellets that transfer momentum to the impact point. Ideal for assembling machine parts without damage. Speeds up work while reducing fatigue. Allows better hammer control by absorbing the bounce. Available in four sizes .

No-Rebound Drop Hammers have replaceable nylon inserts. These nylon inserts are hard, grease and oil resistant, highly elastic, and have superior strike effectiveness. Applications include assembly operations, metalworking, tooling, positioning of workpieces, automotive assembly and repair work, joining of workpieces, sheet metal working, dent removal, mold construction, and assembly of sharp-edged workpieces.

PART NO.	FACE DIA	WEIGHT (LBS)	LENGTH	REPLACEMENT INSERT (2 REQUIRED)

SOFT-FACE PUNCHES

HOUSING: STEEL. INSERTS: NYLON, NATURAL WHITE COLOR, HARDNESS 68-78 SHORE D

Soft-Face Punches safely extend the reach of a hammer when access is restricted. Transfers impact to difficult-to-reach places. Available in two sizes.

Soft-Face Punches have replaceable nylon inserts. These nylon inserts are hard, grease and oil resistant, highly elastic, and have superior strike effectiveness. Applications include assembly operations, metalworking, tooling, automotive assembly and repair work, joining of workpieces, sheet metal working, dent removal, and assembly of sharp-edged workpieces.

PART NO.	FACE DIA	WEIGHT (LBS)	LENGTH	REPLACEMENT INSERT (2 REQUIRED)

THREADED INSERTS

Key Inserts – Heavy Duty

Key Inserts – Thinwall

Key Inserts – Solid

Key-Insert Installation Tools

Key-Insert Assortments

Adhesive-Bonded Fasteners

KEY INSERTS

Key Inserts are often used to reinforce tapped holes in aluminum tooling plates.

These key-locking threaded inserts are ideal for thread reinforcement, especially when the mating stud or bolt will be removed frequently. They provide strong, permanent steel threads in any parent material — ferrous, non-ferrous, or non-metallic.

Key Inserts are also well suited for quick repair of stripped, damaged, or worn threads. A solid version is also available to use as a handy plug to relocate holes drilled or tapped on the wrong location.

Install with standard drills and taps. Important: Use tap drill specified in table (slightly larger than standard for that thread size). Tap-drill hole tolerance should be $-.001/+0.004$ ($-.001/+0.005$ above .500 dia).

Locking keys are driven down into the parent material during installation, providing a positive mechanical lock against rotation. Inserts with an ID thread 5/16 and above have four locking keys, smaller sizes have two. Pull-out strength can be calculated approximately by the following formula:

$$\text{Approximate pull-out strength} = \text{Shear engagement area of insert (see table)} \times \text{Minimum ultimate shear strength of parent material (psi)}$$

EASY INSTALLATION

1. Drill out old threads using tap drill specified in table (Important: Correct tap drill is slightly larger than standard for that thread size).

2. Countersink to diameter shown in table.

3. Tap new threads, using standard tap.

4. Screw in insert until body is slightly (.010 to .030 inches) below the surface, by hand or using installation tool. Keys act as a depth stop.

5. Drive keys down with several light hammer taps on installation tool (or directly on keys if no installation tool is available).

EASY REMOVAL

1. Drill out locking keys with specified drill diameter and depth (see table).

2. Deflect keys inward and break off.

3. Remove insert with an E-Z OUT type tool.

4. Screw replacement into original holes. Parent material is totally undamaged.

KEY INSERTS – HEAVY DUTY

BODY: 1215 STEEL, BLACK OXIDE FINISH. KEYS: 302 STAINLESS STEEL

Heavy Duty – Steel

For installation tools, see tables below.

Repair Kits shown below contain an installation tool and several Key Inserts of a given size.

General-purpose threaded inserts suitable for most applications. Available in USA ID-thread sizes from #10-24 to 1-1/2"-12, plus metric sizes from M5 to M24. Important: Use tap drill specified in table (slightly larger than standard for that thread size).

KEY INSERTS – HEAVY DUTY

BODY: 303 STAINLESS STEEL. KEYS: 302 STAINLESS STEEL

**Heavy Duty –
Stainless Steel**

Stainless steel version of our general-purpose threaded inserts with a thick, heavy-duty thread wall. Key Inserts are ideal for thread reinforcement, especially when the mating stud or bolt will be removed frequently. These stainless inserts provide strong, permanent stainless steel threads in any parent material, ferrous, non-ferrous, or non-metallic. Key Inserts are also well suited for quick repair of stripped, damaged, or worn threads. Locking keys positively prevent the insert from rotating.

**Heavy Duty –
Stainless Steel
Internal-Thread
Locking**

Stainless Key Inserts are optionally available with “Internal Thread Locking,” which uses a modified internal thread to prevent the installed bolt or stud from rotating. This feature is useful for one-time, permanent installations.

See Technical Information at the beginning of this section for complete installation steps. Key Inserts are installed with standard drills and taps. Important: Use exactly the tap-drill size specified in the tables (slightly larger than the standard tap drill for that thread size). Locking keys are driven down into the parent material during installation, providing a positive mechanical lock against rotation. See tables for optional installation tools.

KEY INSERTS – THINWALL

BODY: 12L15 STEEL, BLACK OXIDE FINISH, OR 303 STAINLESS STEEL.
KEYS: 302 STAINLESS STEEL

**Thinwall —
Steel and
Stainless Steel**

Thinwall Key Inserts have a smaller OD thread size than standard heavy-duty inserts, ideal for tight spaces where less pull-out strength is acceptable. Key Inserts are ideal for thread reinforcement, especially when the mating stud or bolt will be removed frequently. These stainless inserts provide strong, permanent stainless steel threads in any parent material, ferrous, non-ferrous, or non-metallic. Key Inserts are also well suited for quick repair of stripped, damaged, or worn threads. Locking keys positively prevent the insert from rotating.

**Thinwall —
Stainless Steel
Internal-Thread
Locking**

Stainless Key Inserts are optionally available with “Internal Thread Locking,” which uses a modified internal thread to prevent the installed bolt or stud from rotating. This feature is useful for one-time, permanent installations.

See Technical Information at the beginning of this section for complete installation steps. Key Inserts are installed with standard drills and taps. Important: Use exactly the tap-drill size specified in the tables (slightly larger than the standard tap drill for that thread size). Locking keys are driven down into the parent material during installation, providing a positive mechanical lock against rotation. See tables for optional installation tools.

KEY INSERTS – SOLID

BODY: 1215 STEEL, BLACK OXIDE FINISH, OR 303 STAINLESS STEEL.
KEYS: 302 STAINLESS STEEL

**Solid –
Steel and
Stainless Steel**

Solid Key Inserts are ideal for relocating a drilled or tapped hole. This threaded plug installs quickly, and the locking keys positively prevent the insert from rotating.

See Technical Information at the beginning of this section for complete installation steps. Key Inserts are installed with standard drills and taps. Important: Use exactly the tap-drill size specified in the tables (slightly larger than the standard tap drill for that thread size). Locking keys are driven down into the parent material during installation, providing a positive mechanical lock against rotation. See tables for optional installation tools.

For installation tools, see table below.

KEY INSERT ASSORTMENTS

With Key Insert Assortments, you always have the right insert and installation tool on hand for thread repairs. Each of the four assortments contains many different insert sizes and an installation tool for each size. The durable case provides convenient storage and clear organization. **INFO+:** Order individual inserts on pages 344-348 as refills.

ADHESIVELY BONDED FASTENERS

STUDS & FLOATING NUT PLATES: 304 STAINLESS STEEL
LANYARD MOUNT: PLASTIC

New Adhesively Bonded Fastener System!

This unique system of fasteners is designed to be adhesively bonded to almost any substrate – metal, plastic, or composite. This wide range of fasteners includes studs, floating nut plates, and lanyard mounts. The heart of this fastener system is our WELD MOUNT® No-Slide Adhesive, which is specifically formulated to be used with our adhesively bonded fasteners. This unique structural adhesive is a high-strength, high-viscosity methacrylate with incredible strength in both tension and shear, designed to hold any of our adhesively bonded fasteners without sliding or sagging, even on a vertical or overhead surface, with no need for fixturing.

Adhesively Bonded Studs

Our Adhesively Bonded Studs are heavy-duty structural parts that provide considerable tensile and shear strength. These studs can be attached to virtually any metal, plastic, or composite surface using our acrylic adhesive. They can be bonded on either surface of the base plate, bottom or top. Made of 304 stainless steel for excellent corrosion resistance. The largest two sizes are inertial (friction) welded to a 2" base plate, creating a very strong part with 1200 lbs tensile strength and 1500 lbs shear strength.

ADHESIVELY BONDED STUDS

WELD MOUNT® is a registered trademark of Royal Adhesives and Sealants, LLC.

ADHESIVELY BONDED FASTENERS

Adhesively Bonded Floating Nut Plates

Floating Nut Plates have a captive threaded nut that floats to allow for accurate bolt alignment. Our adhesively bonded nut plates eliminate tapping. These nut plates can be used for either through-hole or blind-hole applications. Made of 304 stainless steel for excellent corrosion resistance. An included rubber fixture insert holds the nut plate stationary while it is bonded in place with acrylic adhesive, keeping the threads clean during installation. Remove the rubber fixture when you are ready to make up the assembly.

Adhesively Bonded Lanyard Mounts

This heavy-duty lanyard mount is designed to be bonded with our acrylic adhesive, eliminating drilling, blocking, and tapping operations. Provides an excellent average pull strength of 150 lbs. These lanyard mounts fit wire-rope cable lanyards up to .094" diameter (#3) or wire ties up to .35" wide (#5).

ADHESIVELY BONDED FASTENERS

WELD MOUNT® No-Slide Adhesive

WELD MOUNT® No-Slide Adhesive

This unique structural adhesive is specifically formulated to be used with our adhesively bonded fasteners. Adhesive CL-AT-8040 is a high-strength, high-viscosity methacrylate with incredible strength in both tension and shear, designed to hold any of our adhesively bonded fasteners without sliding or sagging, even on a vertical or overhead surface, with no need for fixturing.

CL-AT-8040 is a solvent-free, VOC-compliant, two-part methacrylate-based, structural adhesive formulated to bond metals, engineered thermoplastics and thermosetting plastics, and composites to most metal and composite substrates. It has excellent adhesion to metal surfaces including aluminum, stainless steel, galvanized steel, and plated steels. CL-AT-8040 forms a tough high-strength bond, with minimal surface preparation required, developing handling strength in 12 minutes and a functional cure within 45 minutes, making it ideal for production applications. Shear strength exceeds 3500 psi on aluminum, with remarkable impact and peel strengths. Comprehensive Care & Use Instructions are included with this product and can be found at www.carrlane.com. Note: this product ships to USA and Canada only, via air freight.

ADHESIVELY BONDED FASTENERS

SIMPLE INSTALLATION

1

Step 1
Clean fastener and substrate with Scotchbrite (light scuff) and solvent.

5

Step 5
Put a large drop of adhesive in the center of the part base.

2

Step 2
Cap can only be installed one way, preventing cross contamination.

6

Step 6
Push part into the substrate to squeeze adhesive out from base.

8

3

Step 3
New cartridge design insures easy reuse of the adhesive.

7

Step 7
Slowly turn part clockwise while pushing until it won't turn.

4

Step 4
Fit tip onto CL-AT-8040 cartridge.

CARR LOCK® SYSTEM

CLAMP BODY: 4340 STEEL, HEAT TREATED RC 40-45, BLACK OXIDE FINISH
 RECEIVER BUSHINGS: 4340 STEEL, HEAT TREATED RC 50-54, BLACK OXIDE FINISH
 LINERS: 1144 OR TOOL STEEL, HEAT TREATED RC 58-64, BLACK OXIDE FINISH

Carr Lock® Clamp

Turning the clamping screw with a hex wrench advances the large center ball, pushing the three clamping balls outward. These balls engage the angled ID of the Receiver Bushing, pulling the entire unit firmly downward.

The Carr Lock® System allows accurately locating and clamping at the same time, with just the turn of a hex wrench. Ideal for mounting quick-change tooling on a subplate. Each mount consists of three components: (1) a Carr Lock® Clamp with a precisely ground shank; (2) a Liner Bushing in the top plate; (3) a Receiver Bushing in the subplate. This compact assembly provides considerable holddown force, together with an incredible $\pm .0005$ inches repeatability!

Each top plate should have one Carr Lock® Clamp designated as its primary reference point, and one as its secondary reference point. These two clamps should be as far apart as possible. The secondary reference point should have a relieved liner to avoid redundant location (binding). Additional Carr Lock® Clamps can be used for more clamping force, but these should be installed in clearance holes, not locating liners. Note that the same Carr Lock® Clamp fits any type of liner or a clearance hole.

Carr Lock® Clamps must be used with one of the Receiver Bushings (INFO+) on page 356. Plate thickness must be $\pm .005$ inches to achieve proper clamping force. Special grip lengths for other plate thicknesses are available as specials. Do not exceed maximum screw torque shown.

CARR LOCK® SYSTEM

Primary Liner Bushing

Secondary Liner Bushing

Slotted Locator Bushing

LINER BUSHINGS

Each top plate should have one Primary Liner, and one Secondary Liner or Slotted Locator Bushing. Primary Liners have a tight ID (+.0002/+.0007 tolerance) for precise reference in two axes. Secondary Liners have an extra .001" ID clearance (+.0012/+.0017 tolerance) to avoid binding. Slotted Locator Bushings provide better accuracy than Secondary Liners, but take a few extra steps to install. Slotted Locators have a tight ID tolerance in one direction and full relief in the perpendicular direction (available only in 16mm, 20mm, and 25mm diameters). Note: alternatively, two Primary Liners can be used for alignment if hole locations are held to ±.0002 inches.

To mount top plates with more than two Carr Lock® Clamps, use clearance holes .015-.030 inches over nominal size for the additional holes, instead of liner bushings, to avoid redundant location. (Still use four Receiver Bushings in the subplate.)

Extra-thick top plates can be counterbored to achieve proper clamping thickness (hold thickness to ±.005). Special-length Carr Lock® Clamps are also available, as specials.

CARR LOCK® SYSTEM

**Face-Mount
Receiver Bushing**

**Back-Mount
Receiver Bushing**

RECEIVER BUSHINGS

Carr Lock® Clamps must be used in conjunction with one of these Receiver Bushings. Face-Mount Receiver Bushings can be bolted into a slip-fit bored hole from above, with three Socket-Head Cap Screws (furnished). Back-Mount Receiver Bushings are more compact, but take more effort to install. Back-mount bushings are installed in the subplate from below, with a slight press fit (measure actual bushing before boring hole to provide .0005 maximum press fit, to avoid I.D. distortion). With either bushing type, the installation holes must be jig bored for accurate size and location. Installed bushings will be approximately .012" below the subplate surface.

CARR LOCK® SYSTEM

**Carr Lock®
System Kit**

Carr Lock® System Kits include everything you need to set up an efficient quick-change fixturing system. The system's foundation is a Carr Lock® Subplate – a precision-machined steel plate with Carr Lock® Receiver Bushings installed in a standard pattern. Carr Lock® System Kits also include one or more Carr Lock® Fixture Plates, plus all required Carr Lock® Clamps and subplate-mounting components.

The Carr Lock® System is extremely accurate. All Receiver-Bushing installation holes are located ± 0.0002 " from their primary reference hole. Clamping repeatability is ± 0.0005 ", while bushing concentricity is 0.0002 " TIR. The resulting x/y-axis repeatability of a mounted fixture plate is ± 0.0028 " considering all tolerance accumulation. Made in USA.

CARR LOCK® SYSTEM

SUBPLATE: CARBON STEEL

RECEIVER BUSHINGS: 4340 STEEL, HEAT TREATED RC 50-54, BLACK OXIDE FINISH

**Carr Lock® Subplate
12 x 14
For HAAS® Mini Mill**

Carr Lock® Subplates are precision-machined steel plates with Carr Lock® Receiver Bushings installed in a standard pattern. These subplates serve as the foundation of an efficient quick-change fixturing system. The 12 x 14 subplate shown here has (4) 20mm Face-Mount Receiver Bushings for mounting Fixture Plates.

Subplates should generally be large enough to cover most of the machine table, for maximum fixture flexibility, but should never extend beyond the machine table. For maximum quick-change benefits, subplates are usually left permanently on the machine table while only the mounted fixtures or vises are exchanged.

The Carr Lock® System is extremely accurate. All Receiver-Bushing installation holes are located $\pm .0002$ " from their primary reference hole. Clamping repeatability is $\pm .0005$ ", while bushing concentricity is $.0002$ " TIR. The resulting x/y-axis repeatability of a mounted fixture plate is $\pm .0028$ " considering all tolerance accumulation. Made in USA.

Carr Lock® System Kits

System Kits include everything you need to set up an efficient quick-change fixturing system. Kits include a Carr Lock® subplate, one or more Carr Lock® Fixture Plates, plus all required Carr Lock® Clamps and subplate-mounting components (Sure-Lock™ Fixture Keys, T Nuts, and Socket-Head Cap Screws).

CARR LOCK® SYSTEM

SUBPLATE: CARBON STEEL

RECEIVER BUSHINGS: 4340 STEEL, HEAT TREATED RC 50-54, BLACK OXIDE FINISH

**Carr Lock® Subplate
500 x 1000mm**

Carr Lock® Subplates are precision-machined steel plates with Carr Lock® Receiver Bushings installed in a standard pattern. These subplates serve as the foundation of an efficient quick-change fixturing system. The 500 x 1000mm subplate shown here has (18) 20mm and (8) 25mm Face-Mount Receiver Bushings to allow mounting a variety of fixture plates and vise plates.

Subplates should generally be large enough to cover most of the machine table, for maximum fixture flexibility, but should never extend beyond the machine table. For maximum quick-change benefits, subplates are usually left permanently on the machine table while only the mounted fixtures or vises are exchanged.

The Carr Lock® System is extremely accurate. All Receiver-Bushing installation holes are located +/- .0002" from their primary reference hole. Clamping repeatability is +/- .0005", while bushing concentricity is .0002" TIR. The resulting x/y-axis repeatability of a mounted fixture plate is +/- .0028" considering all tolerance accumulation. Made in USA.

Carr Lock® System Kits

System Kits include everything you need to set up an efficient quick-change fixturing system. Kits include a Carr Lock® subplate, one or more Carr Lock® Fixture Plates, plus all required Carr Lock® Clamps and subplate-mounting components (Sure-Lock™ Fixture Keys, T Nuts, and Socket-Head Cap Screws).

CARR LOCK® SYSTEM

FIXTURE PLATE: MIC-6 PRECISION-MACHINED CAST ALUMINUM
 LINER BUSHINGS: 1144 STEEL, HEAT TREATED RC 58-64, BLACK OXIDE FINISH

Carr Lock® Fixture Plates

Carr Lock® Fixture Plates are precision-machined MIC-6 cast aluminum plates available in a wide range of standard sizes to use as a base for building quick-change fixtures. To fasten the Carr Lock® Fixture Plate to a subplate, begin by inserting a Carr Lock® Clamp into each of the four corner holes. Next, fully tighten the clamps one at a time – first the clamp in the primary liner bushing, then the clamp in the secondary liner bushing, then the clamps in the clearance holes. Made in USA.

**Carr Lock®
 Fixture Plate
 12 x 14**

These 12 x 14 fixture plates have four 20mm mounting holes – a primary liner, a secondary liner, and two clearance holes. They also have two fixture-key holes for conventional mounting directly on a slotted machine table using Sure-Lock™ Fixture Keys.

CARR LOCK® SYSTEM

FIXTURE MACHINING KITS

Carr Lock® Fixture Machining Kits are extremely useful for machining a fixture using its Carr Lock® mounting holes as an absolute reference. The kit consists of four extra-long Carr Lock® Clamps, used together with four precision-height spacers, providing ample clearance underneath the fixture plate to allow through-hole machining without damaging the subplate. The kit also includes an extra four spacers to use as additional supports under large plates, all in a handy carrying case. Made in USA.

FIXTURE MACHINING KITS

PART NO.	CARR LOCK® CLAMP DIAMETER	FOR FIXTURE-PLATE THICKNESS	SPACER HEIGHT	SPACER OD
CL-20-CLMK-0.75	20mm	.750	.500	1-3/4
CL-25-CLMK-0.75	25mm	.750	.750	2
CL-25-CLMK-1.00		1.000	.500	2

These handy Preset Torque Wrenches are designed to tighten Carr Lock® Clamps exactly to their maximum recommended torque, ensuring that maximum hold-down force is achieved without over-tightening. The wrench body shown here is used for the first three Carr Lock® Clamp sizes – 13mm, 16mm, and 20mm – each preset to the torque recommended for that size, and with the appropriate hex key. A slightly larger wrench body is used for the 25mm size. Torque accuracy is +/-10%.

HEADLESS CARR LOCK® CLAMP

CLAMP BODY: 4340 STEEL, HEAT TREATED, RC 40-45
 BALLS: 440C STAINLESS
 CLAMPING SCREW: CARBON STEEL, BLACK OXIDE
 O-RING: VITON

The Headless Carr Lock® System allows accurately locating and clamping at the same time, with just the turn of a hex wrench. Ideal for mounting quick-change tooling on a subplate while taking minimal real estate on the top of your fixture. The Headless Carr Lock® Clamp comes in two variants, primary (-1) and secondary (-2). The primary clamp is used to accurately locate your plate while the looser fit on the secondary clamp reduces binding. Made in USA, available in 13mm, 16mm, and 20mm Shank Diameters.

CL5[®] QUICK-CHANGE 5-AXIS WORKHOLDING

Quintus 1
Quick-Change Riser
 Pull-Down Force 2700 Lbs
 CLRH-9-6153-0101-VSA

Quintus Quick-Change Risers provide accurate location and secure clamping while also providing quick-change capability and elevating the workpiece for improved spindle access – all in one compact unit. The Quintus 1 riser shown here utilizes two locating pins, a round pin for zero-point centering and a diamond pin for single-axis centering, and a single pull-down bolt that provides 2700 lbs of pull-down force.

9

CL5® QUICK-CHANGE 5-AXIS WORKHOLDING

Quintus 2
Quick-Change Riser
 Pull-Down Force 4500 Lbs x 2
 CLRH-9-6155-0102-VSA

Quintus Quick-Change Risers provide accurate location and secure clamping while also providing quick-change capability and elevating the workpiece for improved spindle access – all in one compact unit. The Quintus 2 riser shown here utilizes two pull-down bolts – one with zero-point centering, the other with single-axis centering – providing 2 x 4500 lbs of pull-down force.

CL5[®] QUICK-CHANGE 5-AXIS WORKHOLDING

5-AXIS VISES FOR MOUNTING ON QUINTUS 1

MCP40

Fixed-Jaw Vise

40mm wide x 110mm long
1800 lbs clamping force

The MCP40 vise is extremely compact yet quite powerful. Like all of our 5-Axis vises, this vise has optimal features to allow unrestricted tool access for multiple-side machining. The standard fixed-jaw version has one fixed jaw and one sliding jaw that clamps against it. Due to its small size, the MCP40 vise uses an adaptor plate to mount on a Quintus 1 riser. **INFO+**: See our online catalog for more information.

MCP40 Z

Concentric Vise

40mm wide x 110mm long
1800 lbs clamping force

The Z-series version of our MCP40 vise is dimensionally similar, but incorporates our precision self-centering mechanism. This concentric vise has two sliding jaws that provide clamping at the exact center of the rotary table. **INFO+**: See our online catalog for more information.

MCP60

Fixed-Jaw Vise

60mm wide x 170mm long
3400 lbs clamping force

The MCP60 vise is our most popular 5-Axis-vise size. Like all of our 5-Axis vises, this vise has optimal features to allow unrestricted tool access for multiple-side machining. The standard fixed-jaw version has one fixed jaw and one sliding jaw that clamps against it. **INFO+**: See our online catalog for more information.

MCP60 Z

Concentric Vise

60mm wide x 170mm long
3400 lbs clamping force

The Z-series version of our MCP60 vise is dimensionally similar, but incorporates our precision self-centering mechanism. This concentric vise has two sliding jaws that provide clamping at the exact center of the rotary table. **INFO+**: See our online catalog for more information.

SCS80

Fixed-Jaw Vise

80mm wide x 200mm long
5600 lbs clamping force

SCS-series vises are slightly wider, and allow clamping higher up in the jaws with greater holding force. Like all of our 5-Axis vises, the SCS80 vise has optimal features to allow unrestricted tool access for multiple-side machining. The standard fixed-jaw design has one fixed jaw and one sliding jaw that clamps against it. **INFO+**: See our online catalog for more information.

CL5® QUICK-CHANGE 5-AXIS WORKHOLDING

5-AXIS VISES FOR MOUNTING ON QUINTUS 2

MCP100

Fixed-Jaw Vise

100mm wide x 260mm long
5600 lbs clamping force

The MCP100 vise handles a wide range of workpiece sizes. Like all of our 5-Axis vises, this vise has optimal features to allow unrestricted tool access for multiple-side machining. The standard fixed-jaw version has one fixed jaw and one sliding jaw that clamps against it. **INFO+**: See our online catalog for more information.

MCP100 Z

Concentric Vise

100mm wide x 266mm long
5600 lbs clamping force

The Z-series version of our MCP100 vise is dimensionally similar, but incorporates our precision self-centering mechanism. This concentric vise has two sliding jaws that provide clamping at the exact center of the rotary table. **INFO+**: See our online catalog for more information.

SCS120

Fixed-Jaw Vise

120mm wide x 227mm long
9000 lbs clamping force

SCS-series vises are slightly wider, and allow clamping higher up in the jaws with greater holding force. Like all of our 5-Axis vises, the SCS120 vise has optimal features to allow unrestricted tool access for multiple-side machining. The standard fixed-jaw design has one fixed jaw and one sliding jaw that clamps against it. **INFO+**: See our online catalog for more information.

5-AXIS VISES FOR MOUNTING ON QUINTUS 3

MCP125 Z

Concentric Vise

125mm wide x 465mm long
7900 lbs clamping force

The MCP125Z vise is ideal for large workpieces. Like all of our 5-Axis vises, this vise has optimal features to allow unrestricted tool access for multiple-side machining. This Z-series concentric vise incorporates our precision self-centering mechanism, with two sliding jaws that provide clamping at the exact center of the rotary table. Shown with optional tapered slides. **INFO+**: See our online catalog for more information.

CL5® QUICK-CHANGE 5-AXIS WORKHOLDING

DOVETAIL VISE JAWS

Dovetail Vise Jaw Insert

Example dovetail extension at bottom of workpiece.

Dovetail clamping requires leaving excess material at the bottom of each workpiece for machining a male dovetail. This machined dovetail extension is used to clamp on during 5-Axis work, by a mating dovetail clamp or vise jaw, then is removed in a secondary machining operation. The dovetail inserts shown here fit 60mm-wide insertable jaws on MCP60 and MCP60Z 5-Axis vises, with other sizes available upon request. Inserts are available for either 45-degree or 60-degree dovetails. 1018 steel, carburized-hardened, black oxide finish.

CENTER LOCATING KEYS

Center Locating Keys are used to precisely center a fixture on a rotary table. They can be used for mounting Quintus Quick-Change Risers, Riser Blocks, and Round Tooling Plates, which all have a standard 25mm center hole. All Center Locating Keys have a 25mm upper diameter and are available with a wide range of bottom diameters to fit the rotary table's center hole. 1144 steel, heat treated Rc 50-55, black oxide finish.

DROPZERO™ MODULAR ZERO-POINT SYSTEM

- Reduces setup time and fixturing costs
- Modular design works with all of CLM's 1/2" and 5/8" modular tooling
- Can also be used with non-modular tooling
- Elevates workpiece for machine spindle clearance
- Access to all 5 sides of the part
- Stackable for added clearance
- High stability due to robust and wide design

New item!

With a few turns of a wrench, new DropZero Modular Zero-Point System quickly unloads and loads new parts in one setup, all while having access to all five sides of the workpiece. Pull studs (round, diamond, and floating) are mounted directly to a part, and clamp modules can be mounted to any fixture plate and can be stacked for added height. DropZero gives you better part quality due to a completely machined part in one setup, reduced fixturing costs, and simpler tool paths.

Application Examples

Four DropZeros mounted on a Carr Lane Mfg. modular fixturing plate holding an aluminum billet part.

Example of side work for vertical applications.

Operation	Manual
Type	Zero Point Mounting
Retention force (lbs) / Torque (ft-lbs)	2700 lbs/ 45 ft-lbs [12 kN/ 60 Nm]
A (in.)	2.35 ± 0.0004 in [59.8 ± 0.01 mm]
Ø B (in.)	3.50 in [88.9 mm]
Weight (lbs)	5.64 lbs [2.56 kg]
Part No.	CLR-DZ12-889-598
Pallet Change Repeatability	≤ 0.0004 in [0.01 mm]

STARK ZERO-POINT MOUNTING SYSTEM

PRINCIPLES OF OPERATION

9

Releasing pneumatically:

- Pneumatic pressure (1) is applied to the piston (2) and the piston moves upward. The spiral springs (3) are pressed together.
- The clamping fingers (4) move upward through the piston (2) and pull the segments (5) to the outside.
- The retractable nipple (6) is released.

Clamping mechanically:

- The pneumatic pressure is relieved. The pneumatic pressure drops to zero.
- The spring pre-load is applied via the piston (2) and push the segments (5) toward the inside.
- The retractable nipple (6) is pulled down by the clamping face on the segments (5) and clamped against the bearing surface.

STARK ZERO-POINT MOUNTING SYSTEM

FEATURES AND ADVANTAGES

Design

- Compact design (Flush Mount, screw-fit or module)
- High retention force, enormous power density
- Maintenance-free, designed for large number of load changes (> 2 million in continuous test)
- Made of high quality tool steel and chromium steel
- Actuation with clean air, from 75psi to release
- Can be operated without additional service unit
- Environmentally friendly and clean operation (no oil)
- Particularly suitable for oil-free environment, e.g. in the foodstuffs, aerospace industry or medical sector.

Positive action operation

- The segments are actuated mechanically
- Powerful and secure clamping is ensured at all times
- In an endurance test over 3 million clamping cycles tested full functionality even under extreme conditions.
- Functions reliably in any installation position
- Very short clamping and release time – 0.2sec

Cylindrical fit

- Due to the cylindrical fit, high lateral forces can be absorbed by the fast closing clamp during the machining
- Ideal pre-centring for Römheld coupling elements without coupling travel, data sheet F9.461

Segments

- Due to the optimal all-round positive clamping action of the clamping segments, the retractable nipple is retained stably and securely in the fast closing clamp.

RECTANGULAR TOOLING PLATES

GRAY CAST IRON, ASTM CLASS 45

T-Slotted Table

Precision blank tooling plates that are ready to mount on virtually any vertical machining center, reducing tooling cost and leadtime considerably. Finish machined to tight tolerances. Precision Locating-Key holes allow accurate mounting directly on a machine table. Available in two standard fixture sizes.

PART NO.	A		B		C	WEIGHT (lbs)
	NOMINAL	ACTUAL	NOMINAL	ACTUAL		
CL-1624-RTPB	16	15.75	24	23.62	20	188
CL-2024-RTPB	20	19.69	24	23.62	20	235

9

SQUARE PALLET TOOLING PLATES

GRAY CAST IRON, ASTM CLASS 45

Precision blank tooling plates that are ready to mount on standard horizontal-machining-center pallets, reducing tooling cost and leadtime considerably. Finish machined to tight tolerances. JIS mounting from two reference edges provides accurate location.

9

PART NO.	B PALLET SIZE		A HEIGHT		C1	C2	D	NO. OF MOUNTING HOLES	WEIGHT (lbs)
	NOMINAL	ACTUAL	NOMINAL	ACTUAL					
CL-400-PTPB	400mm	15.7480	50mm	1.9685	320mm	11.81	55mm	4	126

TWO-SIDED TOOLING BLOCKS

GRAY CAST IRON, ASTM CLASS 45

Extra Tall

Regular Height

These tooling blocks have two identical wide faces to allow fixturing large parts.

Precision blank tooling blocks for horizontal-machining-center pallets. One-piece cast iron construction provides superior accuracy, dimensional stability, and vibration dampening. Both tooling faces are finish machined to tight tolerances and qualified to the base. Dual mounting capability allows both JIS mounting (locating from two reference edges) and DIN mounting (locating from center and radial holes) with excellent accuracy. Universal mounting holes fit almost any inch or metric slot spacing. Available in 400 and 500mm pallet sizes, each in a choice of heights.

FOUR-SIDED TOOLING BLOCKS

GRAY CAST IRON, ASTM CLASS 45

Extra Tall

Regular Height

With four identical faces, these tooling blocks are ideal for loading a large number of medium-size parts on a pallet.

Precision blank tooling blocks for horizontal-machining-center pallets. One-piece cast iron construction provides superior accuracy, dimensional stability, and vibration dampening. All four faces are finish machined to tight tolerances and qualified to the base. Dual mounting capability allows both JIS mounting (locating from two reference edges) and DIN mounting (locating from center and radial holes) with excellent accuracy. Universal mounting holes fit almost any inch or metric slot spacing. Available in 400 and 500mm pallet sizes, each in a choice of heights.

ANGLE BRACKETS WITH LOCATING HOLES

ASTM A36 STEEL, BLACK OXIDE FINISH

Angle Bracket

Extremely accurate angle brackets with precision locating holes. These angles are ideal for bolting together like an erector set to create large-scale tooling. The 90° angle and (8) locating holes are machined to close tolerances to maintain good accuracy in built-up tooling. Use with the precision locating bolts shown below.

ANGLE BRACKETS

PART NO. STEEL	A	B	C	D	E	F	G	H	J
CL-1531-ABK	2	2	3/8	1/4	2	1.000	.750	.750	.750

CAST SECTIONS

CAST IRON: ASTM CLASS 40, TENSILE STRENGTH 40,000 TO 45,000 PSI
 ALUMINUM: 352, TENSILE STRENGTH 30,000 PSI

9

Cast Iron

Fast, economical way to make special fixture components. All surfaces are machined square and parallel within ± 0.005 inches per foot, except ends. Internal faces on square and rectangular sections are unfinished. All dimensions $\pm 1/32$ (except length, which is $-1/16$ to $+1/8$).

Cast sections are available in full lengths (usually 25") or 6" lengths. Custom lengths are available as specials.

HINGED BUSHING PLATES

BASE: A36 STEEL, CARBURIZE-HARDENED, BLACK OXIDE FINISH
 ARM: A36 STEEL, WEAR SURFACES HARD WELDED & GROUND, BLACK OXIDE FINISH
 PIVOT PIN: 4130 STEEL, HEAT TREATED, BLACK OXIDE FINISH

Complete Assembly

Hinged Bushing Plates are precise, heavy-duty bushing-plate assemblies for large-scale production jigs. The swing-away arm is precision ground but left unhardened for installing drill bushings (wear surfaces are hard welded and ground). The arm swings open a full 120° for loading clearance. The mounting base is hardened and precisely ground to provide accurate location. The base includes liner bushings as bearings for the hardened pivot pin, and a half-turn latch screw. Available in three sizes.

9

MODULAR HINGE BUSHING PLATE

BASE & SIDE: MILD STEEL, CARBURIZE, BLACK OXIDE FINISH
 ARM: MILD STEEL, BLACK OXIDE FINISH

Modular Hinged Bushings Plates are precise, heavy-duty bushing-plate assemblies for large-scale production jigs. The Modular Hinged Bushing Plate can be ordered as a standard kit or configured to be customized to your application. The standard kit includes a hardened steel base with ground steel rest pads installed for accurate location, steel sides with installed liner bushings as bearings for the hardened pivot pin, and a swing-away arm that is left unhardened for customer modifications. The arm swings freely but can be locked at 100 deg with the optional locking mechanism. Additional locking options allow for the arm to be locked in the closed position. Fine adjustment of the arm position can be made using a Ball-Ended Thrust Screw for optimal alignment. Modular Hinged Bushings Plates are available in two sizes. Made in USA.

See website for full list of materials and available options.

TRUNNIONS

ARM: TENZALOY ALUMINUM ALLOY
 BODY: ALUMINUM WITH BRONZE BEARINGS, POWDER-COATED EXTERIOR

Locking Type

Trunnions are usually used in pairs, one locking type and one revolving type, to distribute the load between them without bending forces.

Trunnions are rugged, precision bearing mounts for revolving fixtures. Ideal for assembly and welding fixtures, and any other applications where the part must be accessible from all sides. Usually used in pairs, one locking Trunnion and one revolving Trunnion, to distribute the load between them without bending forces. The locking version, shown here, has a friction-cone mechanism that stops the rotor at any angle by tightening the knob handle (loosen knob again to unlock). The revolving version has a free-rotating bearing at both ends of the rotor shaft, with no locking mechanism. Choice of two sizes. **Patent no. 3,129,937.** Made in USA.

TECHNICAL INFORMATION ADJUSTABLE LOCKING HUBS

TYPES AVAILABLE

Heavy-Duty—Stainless Steel
Two Round Ends
INFO+: Page 399

Heavy-Duty—Stainless Steel
Two Mounting Flanges
INFO+: Page 400

Heavy-Duty—Stainless Steel
Mounting Flange & Round End
INFO+: Page 401

APPLICATION EXAMPLES

Adjustable Locking Hubs are often used in pairs, with both push buttons facing outward for easy access.

Connect two Adjustable Locking Hubs at 90° (with pipe or tubing) for full 5-Axis positioning.

Hub extensions allow convenient mounting to flat plates and angles, as well as to pipe and tubing.

Mounting flanges are ideal for attaching Adjustable Locking Hubs to flat surfaces. Heavy-duty hubs are available with either two mounting flanges, or one mounting flange and one round end.

9

Locked

In locked position, the locking-pin hub and release-pin hub are positively engaged by high-strength locking pins.

Unlocked

When the release button is pressed, against spring force, push pins force the locking pins to disengage. The hub is now free to rotate. After reaching the desired angle, releasing the button again allows the locking pins to extend back into locked position.

ADJUSTABLE LOCKING HUBS

BODY: 300-SERIES STAINLESS STEEL, ELECTRO POLISHED. PINS: 416 STAINLESS STEEL, HEAT TREATED
RELEASE BUTTON: BLACK THERMOPLASTIC.

US PATENT NO. 5,586, 363 AND 5,689,999. OTHER PATENTS PENDING.

**Heavy Duty—
Stainless Steel
Two Round Ends
Inline
(220° Adjustment)**

Adjustable Locking Hubs are rotary bearings that provide positive locking at any 10° increment. Once locked, the hub becomes an absolutely rigid joint, able to withstand 80 ft.-lbs. of torque (5:1 safety factor). Round Hub extensions fit 3/4" ID pipe or tubing. The tapped mounting holes can also be used to attach a plate or angle. Applications include adjustable fixtures, rotating fixtures, welding fixtures, trunnion mounting, adjustable and/or foldable handles, adjustable part trays and shelves, adjustable and/or flip-up work surfaces, positive positioning of spotlights or nozzles, and collapsible structures. Also available in alloy steel with a black finish (CL-100-ALH).

INLINE (220° ADJUSTMENT)

ADJUSTABLE LOCKING HUBS

BODY: 300-SERIES STAINLESS STEEL, ELECTRO POLISHED. PINS: 416 STAINLESS STEEL, HEAT TREATED
RELEASE BUTTON: BLACK THERMOPLASTIC.

US PATENT NO. 5,586, 363 AND 5,689,999. OTHER PATENTS PENDING.

**Heavy Duty—
Stainless Steel
Two Mounting Flanges
Inline
(180° Adjustment)**

Adjustable Locking Hubs are rotary bearings that provide positive locking at any 10° increment. Once locked, the hub becomes an absolutely rigid joint, able to withstand 80 ft.-lbs. of torque (5:1 safety factor). Mounting flanges provide two mounting options: (1) two 1/4-20 tapped holes allow fastening an object to the mounting flange; (2) two 9/32 dia clearance holes for 1/4" screws allow fastening the mounting flange to a surface. Applications include adjustable fixtures, rotating fixtures, welding fixtures, trunnion mounting, adjustable and/or foldable handles, adjustable part trays and shelves, adjustable and/or flip-up work surfaces, positive positioning of spotlights or nozzles, and collapsible structures.

INLINE (180° ADJUSTMENT)

PART NO.	TOTAL ADJUSTMENT RANGE	ADJUSTMENT INCREMENTS	ALLOWABLE TORQUE (FT-LB)
CL-120-ALH-S	180°	10°	80

9

**Heavy Duty—
Stainless Steel
Two Mounting Flanges
Offset
(360° Rotation)**

Similar to the Locking Hub above, except hub extensions are offset to allow full 360° rotation. Offset Locking Hubs should usually be used in pairs, to avoid off-center loading on a single hub. Make sure that rotating loads are balanced and avoid any possible pinch points, in case hubs are suddenly unlocked and the load is allowed to rotate freely.

ADJUSTABLE LOCKING HUBS

BODY: 300-SERIES STAINLESS STEEL, ELECTRO POLISHED. PINS: 416 STAINLESS STEEL, HEAT TREATED
RELEASE BUTTON: BLACK THERMOPLASTIC.

US PATENT NO. 5,586,363 AND 5,689,999. OTHER PATENTS PENDING.

**Heavy Duty—
Stainless Steel
Mounting Flange &
Round End Inline
(220° Adjustment)**

Adjustable Locking Hubs are rotary bearings that provide positive locking at any 10° increment. Once locked, the hub becomes an absolutely rigid joint, able to withstand 80 ft.-lbs. of torque (5:1 safety factor). The round hub extension fits 3/4" ID pipe or tubing. The tapped mounting holes can also be used to attach a plate or angle. The mounting flange provides two mounting options: (1) two 1/4-20 tapped holes allow fastening an object to the mounting flange; (2) two 9/32 dia clearance holes for 1/4" screws allow fastening the mounting flange to a surface. Applications include adjustable fixtures, rotating fixtures, welding fixtures, trunnion mounting, adjustable and/or foldable handles, adjustable part trays and shelves, adjustable and/or flip-up work surfaces, positive positioning of spotlights or nozzles, and collapsible structures.

INLINE (220° ADJUSTMENT)

Zero-Point System
p. 658**

WHAT EXACTLY IS MODULAR FIXTURING?

In many ways modular fixturing is just like permanent fixturing, except for a few key differences. First, modular fixtures can be assembled entirely from reusable off-the-shelf components, without machining. Next, many modular components are adjustable and universal. Finally, specially designed tooling plates and blocks, with a standard grid pattern, are the foundation of a good modular system.

A VALUABLE TOOL FOR EVERY MACHINE SHOP:

Most metal-machining manufacturers have good applications for temporary fixturing every day! The leadtime and expense required to build a permanent fixture are often difficult to justify. This is especially true when production runs are small and do not repeat on a regular basis. General-purpose workholders — such as vises, chucks, and table mounted clamps — can be ready for production on short notice, but they are primarily suited for short runs of basic parts. Fortunately, there is now another alternative: modular fixturing. When a company adds modular fixturing to its options, even job-shop-type production can benefit from quality fixturing.

INTRODUCTION

GOOD APPLICATIONS FOR MODULAR FIXTURING:

Modular fixturing is an ideal answer to many workholding problems. One-time jobs, found especially in job shops, are ideal for modular fixturing; with modular fixturing, a workholder can be economically built even for a one-part run. Jobs that do not repeat on a regular basis are well suited to modular fixturing; modular fixturing permits rapid setup of short-notice production runs. Modular fixturing is also ideal for prototype parts; since prototypes are often changed or redesigned, the cost of building a permanent fixture for each new variation would be prohibitive. Replacement parts are another perfect application; modular fixturing allows a company to respond to orders as they are received, instead of shipping parts from an inventory. Trial fixturing is also an excellent application; modular workholders allow a designer to fine tune tooling ideas before a final production workholder is built. Finally, modular fixturing is valuable while permanent fixtures are built or repaired.

WIDE SELECTION OF TOOLING PLATES & BLOCKS:

Tooling plates and blocks are the main structural elements of any modular-fixturing system. The type, style, and number of plates and blocks available determine the variety of fixtures that can be built, and also the number of machine tools that can be used.

MULTIPURPOSE GRID HOLES OFFER MAXIMUM FLEXIBILITY:

Grid-pattern modular-fixturing systems come in two styles: those with alternating dowel holes and tapped holes and those with multipurpose holes. The alternating-hole style does not offer as many advantages as the Carr Lane Manufacturing multipurpose-hole style. Multipurpose holes have both an alignment bushing and threaded insert in the same hole. This arrangement permits each hole to serve as an alignment hole, mounting hole, or both. Multipurpose holes are laid out in a standard 1" or 2" grid pattern (depending on the size) to allow the maximum number of mounting locations.

CHOICE OF TWO SYSTEM SIZES:

A good modular-fixturing system needs to accommodate a wide range of workpiece sizes. Only Carr Lane Manufacturing offers a full line of modular components in three system sizes. As a comparison to choose the proper system size, the table below shows typical clamping force exerted by clamp straps in each size (2-to-1 lever ratio).

SIZE	STUD SIZE	RECOMMENDED TORQUE (FT-LBS)	CLAMPING FORCE (LBS)
STANDARD	1/2-13	38	2300
HEAVY	5/8-11	77	3700

GRID HOLES VS. EARLIER T-SLOT SYSTEMS:

The two primary forms of modular systems available today are those with grid-pattern holes and earlier types with T slots to mount components. Grid holes offer many advantages over T slots. Modular systems with grid holes have greater positional accuracy and strength than those with T slots. T-slot systems permit movement along the slot, so nothing but friction holds components in place. Wherever T slots cross each other, a weak point exists.

TECHNICAL INFORMATION

MULTIPURPOSE HOLES

Standard

Heavy

Every multipurpose hole on a tooling plate or block has a precision alignment bushing on top, with a threaded insert below it. Multipurpose holes will accept Locating Screws, Socket-Head Cap Screws, studs, and many other threaded components. The proper mounting screw for each component is listed in its table of dimensions. Locating Screws are used to locate and fasten at the same time.

TECHNICAL INFORMATION

GRID ADDRESS SYSTEM

The grid pattern of multipurpose holes on every tooling plate and tooling block face is labelled with letters in one direction and numbers in the perpendicular direction. Tooling-block faces are numbered (counterclockwise) with Roman numerals. This allows recording the mounting-hole location of each component (e.g., A2, B3, D7, etc.) as part of permanent documentation. Multipurpose holes are spaced within $\pm.0008$ inches of true position on all tooling plates and blocks.

CUSTOM TOOLING PLATES

To build your own custom tooling plates with multipurpose mounting holes, we offer precision bushings and threaded inserts separately. See hole locations and tolerances above (holes must be jig bored), and (INFO+) page 420 for proper counterbore depth to install bushings. The threaded insert's locking keys can be driven down by the bushing as it is pressed into the tooling plate.

MOUNTING TOOLING PLATES ON T-SLOTTED TABLES

Standard and Heavy

Standard and heavy Rectangular Tooling Plates are accurately located on T-slotted tables using two Locating Keys (**INFO+** page 257) in the center table slot. These plates are fastened to the machine table using four or six Socket-Head Cap Screws (**INFO+** page 428) and T Nuts (**INFO+** page 320). Swivel Hoist Rings are recommended for lifting large tooling plates (**INFO+** page 75).

Two sets of Locating-Key holes allow mounting plates either lengthwise or widthwise on a machine table.

The length of each Rectangular Tooling Plate is the same as the width of the next-larger size, allowing many possible combinations by turning plates 90°.

TECHNICAL INFORMATION

MOUNTING TOOLING PLATES & BLOCKS ON PALLETS

JIS Mounting

JIS-type mounting is the most common way to mount tooling plates and blocks on a machining-center pallet. Here the plate or block is located from two precisely ground reference edges at 90° to each other. The plate or block is pulled against the pallet's edge locators using three Socket-Head Cap Screws and also fastened down with four to eight Socket-Head Cap Screws, depending on the size. Swivel Hoist Rings are recommended for lifting tooling blocks and large tooling plates.

DIN Mounting

Most of our modular tooling plates and blocks also incorporate DIN-mounting capability. Here the plate or block is located using a center hole, and oriented using a radial hole. Two Pallet Fixture Keys, a center pin and a radial pin, are required. The plate or block is fastened down with four to eight Socket-Head Cap Screws, depending on the size.

PALLET SIZE	PALLET CENTER-HOLE DIA	PALLET RADIAL-HOLE DIA	DISTANCE BETWEEN CENTER AND RADIAL HOLES
320mm	50mm	20mm	100mm
400mm			150mm

TWO-SIDED TOOLING BLOCKS

GRAY CAST IRON, ASTM CLASS 45

These tooling blocks have two identical wide faces to allow fixturing large parts.

Precision tooling block for horizontal-machining-center pallets. Both faces are accurately finish machined to tight tolerances, and qualified to the base. All multipurpose holes are spaced within .0008 inches of true position (.0004 for mini). One-piece cast construction provides superior accuracy, dimensional stability, and vibration dampening. Available in a full range of standard pallet sizes, with mounting holes to fit almost any inch or metric slot spacing. Dual mounting capability allows both JIS mounting (locating from two reference edges) and DIN mounting (locating from center and radial holes) with excellent accuracy.

FOUR-SIDED TOOLING BLOCKS

GRAY CAST IRON, ASTM CLASS 45

With four identical faces, these tooling blocks are ideal for loading a large number of medium-size parts on a pallet.

Precision four-sided tooling block for horizontal-machining-center pallets. All four faces are accurately finish machined to tight tolerances, and qualified to the base. All multipurpose holes are spaced within .0008 inches of true position (.0004 for mini). One-piece cast construction provides superior accuracy, dimensional stability, and vibration dampening. Available in a full range of standard pallet sizes, with mounting holes to fit almost any inch or metric slot spacing. Dual mounting capability allows both JIS mounting (locating from two reference edges) and DIN mounting (locating from center and radial holes) with excellent accuracy. Also available as blanks, without multipurpose holes.

HORIZONTAL V BLOCKS

1045 STEEL, HEAT TREATED, BLACK OXIDE FINISH

Standard Heavy

Extremely versatile locator for cylindrical workpieces. Locating surface is precision ground and accurately qualified with respect to the mounting holes. Two tapped holes in the side can be used to mount end stops or clamps. Available in two types: one for small diameters, and one for larger diameters.

In the above example, Support Cylinders are used as end stops for shafts located in Horizontal V Blocks.

To locate a workpiece from two different diameters simultaneously, use Height Shims (**INFO+** page 227) to raise one V block to the proper level.

Standard—Small V

**Standard—Large V
Heavy—Large V**

HEIGHT SHIMS

1010 STEEL

**Standard
Heavy**

Precision shims that allow raising a height locator by a small, exact amount. Ideal when supporting at different levels underneath a workpiece, as in the example shown using Support Cylinders. Thickness tolerance is $\pm .0003$ on .125 size, $\pm 10\%$ on smaller sizes.

MANUAL WORK SUPPORTS

BODY & PLUNGER: CARBON STEEL, CASE HARDENED, BLACK OXIDE FINISH
HANDLE: ZINC DIE CASTING, ENAMEL PAINT

**Standard
Heavy**

Spring-extended manual work support with an extremely low profile. Plunger is locked at proper height by tightening handle. If desired, lock plunger in retracted position for easier loading of light parts, then release and retighten to extend and support. Adjustable handle can be reset to any convenient angle.

Ideal for supporting in hard-to-reach places, such as underneath this casting. Work supports can be positioned to allow convenient handle access.

A Screw Rest Pad, available from 1/4" to 2" tall, is an ideal contact bolt to use in the support plunger. For an adjustable contact screw, use a Knurled Screw Jack. The mounting slot allows stacking other components, such as this Cam Edge Clamp, on top of the support.

SIZE	PART NO.	TAPPED HOLE IN PLUNGER	HEIGHT WITH PLUNGER FULLY RETRACTED	MAX PLUNGER STROKE	DISTANCE FROM PLUNGER TO SLOT	SLOT LENGTH	SOCKET-HEAD CAP SCREW (1 REQD.)

TORQUE SCREW JACKS

1215 STEEL, BLACK OXIDE FINISH

Standard Heavy

A knurled-head screw jack that declutches at a preset torque. When the indicated end force is reached, the head disengages and turns freely. This eliminates the possibility of exerting excess force on thinwall parts. Knurled Check Nut is furnished.

SIZE	PART NO.	THREAD SIZE	END FORCE (LBS)	LENGTH UNDER HEAD
STANDARD	CL-6-TSJ	1/2-13	18-20	1-3/4
HEAVY	CL-8-TSJ	5/8-11	20-22	1-3/4

FORGED ADJUSTABLE CLAMPS

FORGED 1045 STEEL, BLACK OXIDE FINISH

**Standard
Heavy**

Rugged forged steel pivot clamp. Instant height adjustment without blocks or shims. One-piece assembly allows quick setups and eliminates lost clamp pieces. Removable brass heel protects machine table. Clamp can swing 90° in either direction for loading clearance.

HIGH-RISE CLAMPS

Slotted Heel

Standard Heavy

For clamping taller workpieces. All-in-one clamp construction for quick, safe setups. Modular design allows stacking for height flexibility. Clamp Straps slide back for loading clearance.

High-Rise Clamps can be stacked on Narrow Riser Blocks and Spacer Blocks (INFO+ page 430) to reach tall workpieces.

HOOK CLAMPS

CLAMP BODY: 4135 STEEL, HEAT TREATED, BLACK OXIDE FINISH
 HOLDER: 1045 STEEL, BLACK OXIDE FINISH

Versatile Hook Clamps available with either a plain or tapped arm. The tapped-arm version accepts a wide variety of contact bolts or adjustment spindles to increase clamping range (the tapped arm is also slightly longer).

HOOK CLAMPS

MOUNTING BLOCKS: 1045 STEEL, BLACK OXIDE FINISH

**Standard
Heavy**

These mounting blocks for long-arm Hook Clamps have built-in 90° stops that provide consistent arm positioning in both clamped and unclamped position. Two sets of mounting holes allow either base mounting or side mounting. Precision bored hole for smooth swing action. Available for all three sizes of long-arm Hook Clamps.

**Hook-Clamp Mounting Block
(order Hook-Clamp separately)**

SWIVEL CONTACT BOLTS

BALL: CHROME STEEL, HEAT TREATED RC 60-67
 BODY: 1144 STEEL, HEAT TREATED RC 35-40, BLACK OXIDE FINISH

**Standard
Heavy**

Precision swivel ball that can be used as either a contact bolt or rest pad. Ideal for evenly distributing clamping pressure on sloped surfaces.

Swivel Contact Bolts are precision ground for accurate height location, even on sloped surfaces.

SIZE	PART NO.	A	B	D DIA	E	F	G DIA

UP-THRUST CLAMPS

STEEL, WEAR SURFACES HARDENED, BLACK OXIDE FINISH

Standard

Up-Thrust Clamps locate off of the part's top surface and clamp up from below.

Combination clamp and locator with unique upward clamping action. Pushing down the cam handle pulls the lower jaw upward. This clamps the workpiece against the stationary upper jaw, whose bottom surface is a precision-ground locator.

The lower jaw has two clamping surfaces 180° apart, one for thinner parts, the other for thicker parts. The cam handle rotates to screw the lower jaw up or down for fine adjustment.

CAM EDGE CLAMPS

BODY: STEEL, WEAR SURFACES HARDENED, BLACK OXIDE FINISH
BALL HANDLE: BLACK PHENOLIC PLASTIC

Standard

Pivoting-nose edge clamp operated by a cam handle for fast action. Smooth spiral cam locks positively anywhere within its 180° throw. Choice of clockwise or counterclockwise handle rotation to clamp.

Nose pivots to exert clamping force forward and downward at the same time.

SERRATED EDGE CLAMPS

BODY AND NOSE: 1018 STEEL, CARBURIZED-HARDENED, BLACK OXIDE FINISH
 CLAMPING SCREW: 4140 STEEL, HEAT TREATED RC 43-45, BLACK OXIDE FINISH
 NOSE COVER: ALUMINUM

Standard Heavy

High Nose

High-nose version is best for most applications. Gripping high up on the workpiece, close to the machining plane, provides maximum clamping rigidity. A removable aluminum nose cover is furnished for clamping soft or machined parts without damage.

Low Nose

Low-nose version is ideal for thin parts, with its extra machining clearance.

This low-profile clamp is ideal for gripping the side of a workpiece to keep the top clear for machining. Clamps both forward and down simultaneously, by tightening the socket-head screw in the sliding nose with a hex wrench. V-groove in nose is excellent for clamping round parts or corners.

ADJUSTABLE — HIGH NOSE

TOGGLE CLAMPS

TOGGLE-ACTION PRINCIPLES

A toggle clamp is a quick-acting mechanical linkage where two of the elements make up a toggle action. Actuating the clamp first moves it into position, then applies clamping force by compressing or stretching the linkage elements after contacting the workpiece, then positively locks it by moving the toggle action's center pivot past the centerline of the other two pivots, against a stop.

HOLDING CAPACITY

The "holding capacity" listed for each clamp refers to the maximum external force that clamp can safely resist in its locked position without incurring any permanent deformation. For hold-down clamps, holding capacity is measured with the spindle as close as possible to the handle, and will be less at the end of the clamping arm.

ARM TYPES

Open-arm hold-down clamps offer maximum flexibility and adjustability. Two flanged washers hold the spindle in place anywhere along the arm by tightening the jam nuts.

Solid-arm hold-down clamps are easily customized to a particular application. Using the weld-on bolt retainer, you can locate the spindle permanently in one place. The solid-arm version allows mounting the spindle at an angle, or shortening the clamping arm.

MATERIALS

STEEL

Steel clamps are made from various types including 1008, 1010, 1018, and other fine steels. Pivot pins on most clamp models are 400-series stainless steel for extra durability. Many pivot points have hardened steel bushes for long life. Forged steel components, such as those on toggle pliers and push/pull clamps, are made from high-carbon steel. Many push/pull clamp bases are made of nodular iron for wear resistance.

STAINLESS STEEL

Many toggle-clamp models are available in 300-series stainless steel. These corrosion-resistant clamps are useful in chemical environments, plating operations, food processing, salt-spray environments, medical equipment, electronics fixturing, EDM fixturing, and marine environments. Various stainless steel grades, including 303 and 304, are used. Clamps normally furnished with a flat-cushion spindle in the steel version are supplied with a stainless steel hex-head spindle. Other clamps are available in stainless steel as specials.

**ALL CARR LANE MANUFACTURING
TOGGLE CLAMPS
ARE PROUDLY
MADE IN USA**

TOGGLE CLAMPS

TYPES

All Carr Lane Manufacturing toggle clamps are DFARS and RoHS compliant.

HORIZONTAL-HANDLE

Most popular of all toggle clamps. Clamping weights from 100 to 1,000 lbs. Comfortable finger grip. Options include automatically adjusting, low arm, and extra wide opening. **See page 442.**

VERTICAL-HANDLE

Similar to clamps above, except this version has a vertical handle. Clamping weights from 100 to 1,200 lbs. and heavy duty versions offering clamping power from 750 to 6,000 lbs. **See page 451.**

PUSH/PULL

Push/pull clamps feature a plunger that advances and locks by moving the handle forward. Clamp can also be used for pulling instead of pushing. Clamping weights from 100 to 16,000 lbs. **See page 477.**

LATCH-ACTION

Latch action options include adjustable U Bolt, Right-Angle Adjustable U Bolt, Adjustable Hook, and fixed length. **See page 488.**

PLIERS

Forged steel provides strong clamping action. Clamping weights from 200 to 800 lbs. Includes permanently attached and Toggle Bar Clamps as options. **See page 496.**

AIR-POWERED

This clamp linkage is operated by a double-acting air cylinder instead of by hand. Provides high holding capacity and insures positive mechanical locking even if air pressure fails. **See page 501.**

* Functionally equivalent, but differs in some dimension and/or specification. Please check catalog before ordering.

HORIZONTAL-HANDLE TOGGLE CLAMPS

Sizes marked * are also available in stainless steel.

Standard HTC Design p. 443-447

Most-popular and widest-range series of horizontal-handle hold-down clamps. Available in seven sizes, the smaller ones with a comfortable finger grip. Most sizes are available with either a flanged base or a straight base. Choice of solid arm, or open arm for spindle adjustment.

Automatically Adjusting p. 448

Self-adjusting clamp automatically compensates for different workpiece heights without resetting the spindle. Clamping force is always consistent after setting once.

Low-Arm TC Design p. 449

Simple, classic-design horizontal-handle clamps. Available in three sizes, with either a flanged base or a straight base.

Extra-Wide Opening p. 450

Arm opens a full 185° for maximum loading clearance. Unique up-then-down handle motion. Handle locks at a 60° downward angle. Dual flanged bases allow mounting on either horizontal or vertical surfaces. Choice of solid arm, or open arm for spindle adjustment.

HORIZONTAL-HANDLE TOGGLE CLAMPS

VERTICAL-HANDLE TOGGLE CLAMPS

Sizes marked * are also available in stainless steel

Wide Opening p. 453-456

Clamping arm opens past 90° for excellent loading clearance. Most-popular and widest-range series of vertical-handle hold-down clamps. Choice of flanged or straight base, solid or open arm, and regular or T handle in most of the seven available sizes.

Wide Opening – Angle Arm p. 457

Clamps with arm tilted upward for increased clearance underneath. Also useful for applying clamping force at an angle. Wide-opening solid arm. Choice of flanged base or straight base. Available in two sizes.

Wide Opening Automatically Adjusting p. 465

Self-adjusting clamp automatically compensates for different workpiece heights without resetting the spindle. Clamping force is always consistent. Wide opening.

Wide Opening – Heavy-Duty p. 466-467

Heavy-duty production clamps designed for extreme durability. Available either as complete clamps or as basic mechanisms for adding custom clamping arms or handles. Choice of four sizes.

**750 lbs
Automatic Toggle Clamp
(Self Adjusting)**

CL-650-ATC

Automatically adjusts for different workpiece thicknesses! Clamps with the same force anywhere within its adjustment range (1-1/4"). Perfect for welding fixtures, machining fixtures for castings, fixtures holding several part sizes within the same family, or any other application where part size can vary.

Easy to use. To set up, simply adjust the contact spindle to the average workpiece height, and set desired clamping force. After that, operate just like a standard toggle clamp. The patented adjusting mechanism does the rest.

Clamping force is always consistent. The clamp's toggle action ensures that workpieces will remain clamped even under severe vibration. No additional spindle adjustment is ever needed. The clamp even compensates for wear in long production runs.

Fits in the same space, and provides the same clamping force as a standard toggle clamp. A maximum of 250 to 500 lbs clamping force (depending on spindle position) can be applied by hand. Arm opens 106° while handle moves 58°. Supplied with 3/8-16 radius spindle CL-38314-RS and (2) CL-3811-TW flanged washers. **Patent no. 4,407,493.** Shipping weight 1.9 lbs

VERTICAL-HANDLE TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

Heavy-duty automotive-type production clamps designed for extreme durability. The above configuration includes a long horizontal clamping arm with an attached bolt retainer, a vertical handle with vinyl grip, and an integral flanged base (INFO+: see pages 481-483 for other versions). Precision, close-tolerance steel components throughout provide exceptionally smooth operation. Rugged alloy steel handle fork. Guided-arm feature provides positive lateral arm support. All pivot pins are hardened and ground, running in either hardened bushings or the close-tolerance holes of hardened parts. The bottom pivot is a precision bolt which can be adjusted, if desired, to fine tune the amount of free play. These clamps are built to withstand abuse. With just occasional lubrication, they will provide extremely long service life. Black oxide finish. Available in four sizes.

CL-100-HVTC Complete Clamp, Flanged Base

Smallest of the four sizes, yet still quite powerful. Cast alloy steel base and slotted open clamping arm on this size only. Arm opens 130° while handle moves 90°. Accepts any 1/4-20 spindle. Supplied with (2) CL-148-TW flanged washers. Shipping weight 1.0 lbs.

Holding capacity: 750 lbs

CL-302-HVTC Complete Clamp, Flanged Base

Solid arm opens 180° while handle moves 120°. Accepts any 1/2-13 spindle. Shipping weight 2.8 lbs.

Holding capacity: 2000 lbs

CL-502-HVTC Complete Clamp, Flanged Base

Solid arm opens 180° while handle moves 125°. Accepts any 1/2-13 spindle. Shipping weight 4.3 lbs.

Holding capacity: 3000 lbs

CL-602-HVTC Complete Clamp, Flanged Base

Our most-powerful hold-down toggle clamp. Solid arm opens 195° while handle moves 130°. Accepts any 5/8-11 spindle. Shipping weight 9.1 lbs.

Holding capacity: 6000 lbs

VERTICAL-HANDLE TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

Heavy-duty automotive-type production clamps designed for extreme durability. The above configuration includes a long horizontal clamping arm furnished with a bolt retainer (not welded on), a vertical handle with vinyl grip, and a straight base for plate/tongue mounting at any angle. Precision, close-tolerance steel components throughout provide exceptionally smooth operation. Rugged alloy steel handle fork. Guided-arm feature provides positive lateral arm support. All pivot pins are hardened and ground, running in either hardened bushings or the close-tolerance holes of hardened parts. The bottom pivot is a precision bolt which can be adjusted, if desired, to fine tune the amount of free play. These clamps are built to withstand abuse. With just occasional lubrication, they will provide extremely long service life. Black oxide finish. Available in four sizes.

CL-101-HVTC Complete Clamp, Straight Base

Smallest of the four sizes, yet still quite powerful. Cast alloy steel slotted open clamping arm on this size only. Arm opens 205° while handle moves 130°. Accepts any 1/4-20 spindle. Supplied with (2) CL-148-TW flanged washers. Shipping weight 0.9 lbs.

Holding capacity: 750 lbs

CL-303-HVTC Complete Clamp, Straight Base

Solid arm opens 205° while handle moves 130°. Accepts any 1/2-13 spindle. Shipping weight 2.5 lbs.

Holding capacity: 2000 lbs

CL-503-HVTC Complete Clamp, Straight Base

Solid arm opens 195° while handle moves 130°. Accepts any 1/2-13 spindle. Shipping weight 4.0 lbs.

Holding capacity: 3000 lbs

CL-601-HVTC Complete Clamp, Straight Base

Our most-powerful hold-down toggle clamp. Solid arm opens 195° while handle moves 130°. Accepts any 5/8-11 spindle. Shipping weight 8.3 lbs.

Holding capacity: 6000 lbs

Base Plate (order separately)

VERTICAL-HANDLE TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

Heavy-duty automotive-type production clamps designed for extreme durability. The above configuration is a basic toggle mechanism onto which an arm and handle can be welded at any desired angle. The pivot base must be welded to both the clamp mechanism and the fixture, or the optional base plate, after setting the clamp at the proper angle. Precision, close-tolerance steel components throughout provide exceptionally smooth operation. Rugged alloy steel handle fork. Guided-arm feature provides positive lateral arm support. All pivot pins are hardened and ground, running in either hardened bushings or the close-tolerance holes of hardened parts. The bottom pivot is a precision bolt which can be adjusted, if desired, to fine tune the amount of free play. These clamps are built to withstand abuse. With just occasional lubrication, they will provide extremely long service life. Black oxide finish. Available in four sizes.

CL-110-HVTC Basic Mechanism, Pivot Base

Smallest of the four sizes, yet still quite powerful. Arm opens 205° while handle moves 130°. Shipping weight 0.6 lbs. To order basic mechanism without the pivot base, specify part no. CL-120-HVTC.

Holding capacity: 750 lbs

CL-312-HVTC Basic Mechanism, Pivot Base

Arm opens 205° while handle moves 130°. Shipping weight 1.6 lbs. To order basic mechanism without the pivot base, specify part no. CL-320-HVTC.

Holding capacity: 2000 lbs

CL-512-HVTC Basic Mechanism, Pivot Base

Arm opens 195° while handle moves 130°. Shipping weight 2.9 lbs. To order basic mechanism without the pivot base, specify part no. CL-520-HVTC.

Holding capacity: 3000 lbs

CL-610-HVTC Basic Mechanism, Pivot Base

Our most-powerful hold-down toggle clamp. Arm opens 195° while handle moves 130°. Shipping weight 6.4 lbs. To order basic mechanism without the pivot base, specify part no. CL-620-HVTC.

Holding capacity: 6000 lbs

VERTICAL-HANDLE TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

Heavy-duty automotive-type production clamps designed for extreme durability. The above configuration is a basic toggle mechanism onto which an arm and handle can be welded at any desired angle. The straight base is ideal for plate/tongue mounting at any angle. Alternatively, the optional base plate can be attached to construct a tall flanged-base clamp. Precision, close-tolerance steel components throughout provide exceptionally smooth operation. Rugged alloy steel handle fork. Guided-arm feature provides positive lateral arm support. All pivot pins are hardened and ground, running in either hardened bushings or the close-tolerance holes of hardened parts. The bottom pivot is a precision bolt which can be adjusted, if desired, to fine tune the amount of free play. These clamps are built to withstand abuse. With just occasional lubrication, they will provide extremely long service life. Black oxide finish. Available in four sizes.

Straight-base clamps are ideal for welding onto plates.

VERTICAL-HANDLE TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

Hold-down toggle clamp with a unique finger-grip T handle. Extremely compact design. Open arm provides adjustable spindle location. Arm opens 92° while handle moves 175°.

CL-200-VTC

Miniature-size T-handle clamp. Supplied with #10-32 flat-cushion spindle CL-316112-FC and (2) CL-3166-TW flanged washers. Shipping weight 0.2 lbs.

Holding capacity: 150 lbs

CL-300-VTC

Medium-size T-handle clamp. Supplied with 5/16-18 flat-cushion spindle CL-518208-FC and (2) CL-51610-TW flanged washers. Shipping weight 0.6 lbs.

Holding capacity: 350 lbs

CL-500-VTC

Large-size T-handle clamp. Supplied with 3/8-16 flat-cushion spindle CL-38212-FC and (2) CL-3811-TW flanged washers. Shipping weight 1.3 lbs.

Holding capacity: 750 lbs

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

CL-11-TC

CL-111-TC (Top dimension)
CL-211-TC (Middle dimension)
CL-311-TC (Bottom dimension)

Simple, easy-opening clamps with excellent arm reach, extending farther over workpiece than any other clamps their size. Open arm allows spindle adjustment. Arm opens 83° while handle moves 83°. Available in four sizes.

CL-11-TC Low Open Arm, Flanged Base

Miniature clamp in stainless steel. Supplied with #8-32 hex-head spindle CL-832203-SA-S. Shipping weight 0.1 lbs.

Holding capacity: 100 lbs

CL-111-TC Low Open Arm, Flanged Base

Small-size clamp. Accepts any 1/4-20 spindle and (2) CL-147-TW flanged washers. Shipping weight 0.3 lbs.

Holding capacity: 250 lbs

CL-211-TC Low Open Arm, Flanged Base

Medium-size clamp. Accepts any 5/16-18 spindle and (2) CL-51610-TW flanged washers. Shipping weight 0.5 lbs.

Holding capacity: 625 lbs

CL-311-TC Low Open Arm, Flanged Base

Large-size clamp. Arm extends a full 6 inches over workpiece. Accepts any 3/8-16 spindle and (2) CL-3811-TW flanged washers. Shipping weight 1.4 lbs.

Holding capacity: 850 lbs

VERTICAL-HANDLE TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

Simple, easy-opening clamps with extra arm height. Open arm allows spindle adjustment. Arm opens 83° while handle moves 83°. Available in four sizes.

CL-21-TC High Open Arm, Flanged Base

Miniature clamp in stainless steel. Supplied with #8-32 hex-head spindle CL-832203-SA-S. Shipping weight 0.1 lbs.

Holding capacity: 100 lbs

CL-101-TC High Open Arm, Flanged Base

Small-size clamp. Accepts any 1/4-20 spindle and (2) CL-147-TW flanged washers. Shipping weight 0.3 lbs.

Holding capacity: 250 lbs

CL-201-TC High Open Arm, Flanged Base

Medium-size clamp. Accepts any 5/16-18 spindle and (2) CL-51610-TW flanged washers. Shipping weight 0.5 lbs.

Holding capacity: 625 lbs

CL-301-TC High Open Arm, Flanged Base

Large-size clamp. Accepts any 3/8-16 spindle and (2) CL-3811-TW flanged washers. Shipping weight 1.4 lbs.

Holding capacity: 850 lbs

PUSH / PULL TOGGLE CLAMPS

Sizes marked * are also available in stainless steel

All Carr Lane Manufacturing toggle clamps are DFARS and RoHS compliant.

Standard SPC Design p. 477-482

Most popular series of push/pull clamps. Plunger advances and locks by moving the handle forward toward it. Clamp can also be used for pulling instead of pushing (handle locks back in downward position also). Choice of eight sizes.

Horizontal Handle p. 483

Reverse-action push clamp. Plunger advances and locks by moving the handle backward into horizontal position.

PC Design p. 484-485

Durable push/pull clamps with nodular iron bases. Plunger advances and locks by moving the handle forward toward it. Clamp can also be used for pulling instead of pushing (handle locks back in downward position also). Choice of three sizes.

Threaded Body p. 486-487

Compact push/pull clamps for mounting through panels, plates, or angle brackets. Install in a drilled or tapped hole. Plunger locks in either extended or retracted position. Rotate clamp to position handle anywhere within 360°. Choice of three sizes.

PUSH/PULL TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

CL-50-SPC (Metric No. CLM-50-SPC)

Miniature plunger clamp, perfect for electronics fixturing and other light-duty applications. Locks in extended or retracted position. 5/8" plunger travel. Tapped-plunger version supplied with #8-32 nylon hex-head spindle CL-832203-SA (M4 in metric). Also available with 1/4-20 externally threaded plunger. Shipping weight 0.2 lbs.

Holding capacity:

100 lbs

Also available in stainless steel...

PUSH/PULL TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

CL-60-SPC (Metric No. CLM-60-SPC)

Heavier-duty version of our smallest plunger clamp above. This is a powerful clamp in an extremely compact size. Unique base allows bottom or side mounting. Locks in extended or retracted position. 5/8" plunger travel. Plunger is tapped to accept any #8-32 spindle (M4 in metric). Shipping weight 0.2 lbs.

Holding capacity:

150 lbs

Also available in stainless steel...

PUSH/PULL TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

300 lbs

CL-100-SPC (Metric No. CLM-100-SPC)

Tiny, yet extremely powerful plunger clamp with a forged steel base. Requires very little mounting space due to its narrow base and compact low profile. Locks in extended or retracted position. 5/8" plunger travel. Plunger is tapped to accept any 1/4-20 spindle (M6 in metric). Shipping weight 0.5 lbs.

Holding capacity:

300 lbs

Also available

200 lbs
Self-Adjusting
Spring Force

CL-255-SPC

This toggle clamp is the same size as our CL-250-SPC above, and features our patented self-adjusting spring-loaded plunger. The self-adjusting version applies a consistent spring clamping force of 200 lbs (+/- 10%) anywhere within its .20" clamping range. 1-5/8" maximum plunger travel. This version locks only in the "push" direction, and cannot be tapped for a spindle. Optionally available as reverse-acting with a horizontal handle. **Patent no. 6,905,116.** Shipping weight 1.9 lbs.

Spring force (±10%): 200 lbs

2500 lbs

CL-350-SPC (Metric No. CLM-350-SPC)

Compact heavy-duty plunger clamp with an extremely low profile. Rugged forged steel base. Locks in extended or retracted position. 2" plunger travel. Plunger is tapped to accept any 3/8-16 spindle (M10 in metric). Shipping weight 2.0 lbs.

Holding capacity: 2500 lbs

PUSH/PULL TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

2500 lbs
With Safety Lock

CL-350-LSPC

Same as the toggle clamp shown above, except with our unique safety-lock feature. This safety lock automatically engages when the clamp is closed, then remains locked until manually disengaged by pressing the lever before opening. This prevents the clamp from being accidentally opened by bumping the handle. Shipping weight 2.0 lbs.

Holding capacity: 2500 lbs

11

PUSH/PULL TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

5000 lbs

CL-450-SPC (Metric No. CLM-450-SPC)

Extra-heavy-duty clamp features a full 4" plunger travel! Rugged nodular iron base and a 7/8"-diameter plunger combine to handle the toughest clamping jobs. Locks in extended or retracted position. Plunger is tapped to accept any 1/2-13 spindle (M12 in metric). Shipping weight 7.0 lbs.

Holding capacity: 5000 lbs

PUSH/PULL TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

16000 lbs

CL-650-SPC (Metric No. CLM-650-SPC)

Strongest plunger clamp available. Handle and base are made of alloy steel. Precision unit with snap-ring pivot pins to allow removing the plunger even after the clamp is mounted. Locks in extended or retracted position. 3" plunger travel. Plunger is tapped to accept any 5/8-11 spindle (M16 in metric). Shipping weight 5.7 lbs.

Holding capacity: 16000 lbs

PUSH/PULL TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

600 lbs

CL-275-SPC

(Metric No. CLM-275-SPC)

Similar to CL-250-SPC except with reverse handle action. Plunger advances and locks by moving handle backward into horizontal position. 1-3/16" plunger travel. Plunger is tapped to accept any 3/8-16 spindle (M10 in metric). Straight-base version supplied with separate base bracket to allow mounting clamp at an angle. Shipping weight 1.5 lbs.

Holding capacity:

600 lbs

Straight Base
with Bracket

PUSH/PULL TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

200 lbs Spring Force
Self-Adjusting Plunger

CL-285-SPC

This reverse-action toggle clamp is the same size as our CL-275-SPC above, and features our patented self-adjusting spring-loaded plunger. Reverse action advances and locks the plunger by pivoting the handle backward into horizontal position. The self-adjusting version applies a consistent spring clamping force of 200 lbs (+/-10%) anywhere within its .20" clamping range. 1-3/16" maximum plunger travel. This version locks only in the "push" direction, and cannot be tapped for a spindle. Patent no. 6,905,116. Shipping weight 1.5 lbs.

Spring force (±10%):

200 lbs

PUSH/PULL TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

Durable plunger clamp with nodular iron base. Locks in either extended or retracted position. Choice of three sizes.

CL-100-PC (Metric No. CLM-100-PC)

Small-size clamp with 1-3/16" plunger travel. Accepts any 5/16-18 spindle (M8 in metric). Shipping weight 0.9 lbs.

Holding capacity: 500 lbs

CL-200-PC (Metric No. CLM-200-PC)

Medium-size clamp with 1-5/8" plunger travel. Accepts any 3/8-16 spindle (M10 in metric). Shipping weight 1.4 lbs.

Holding capacity: 850 lbs

CL-300-PC (Metric No. CLM-300-PC)

Large-size clamp with 2-11/32" plunger travel. Accepts any 1/2-13 spindle (M12 in metric). Shipping weight 3.2 lbs.

Holding capacity: 1500 lbs

PUSH/PULL TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

INFO+: Same as the toggle clamps shown on page 484, except with our unique safety-lock feature. This safety lock automatically engages when the clamp is closed, then remains locked until manually disengaged by pressing the lever before opening. This prevents the clamp from being accidentally opened by bumping the handle.

Durable plunger clamp with nodular iron base. Locks in extended or retracted position (safety lock functions only in extended position). Choice of three sizes.

CL-100-LPC

Small-size clamp with 1-3/16" plunger travel. Accepts any 5/16-18 spindle. Shipping weight 0.9 lbs.

Holding capacity: 500 lbs

CL-200-LPC

Medium-size clamp with 1-5/8" plunger travel. Accepts any 3/8-16 spindle. Shipping weight 1.4 lbs.

Holding capacity: 850 lbs

CL-300-LPC

Large-size clamp with 2-11/32" plunger travel. Accepts any 1/2-13 spindle. Shipping weight 3.2 lbs.

Holding capacity: 1500 lbs

PUSH/PULL TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

Compact plunger clamps for mounting through panels, plates, or angle brackets. Install in a drilled or tapped hole, securing with the locknut provided. Plunger locks in either extended or retracted position. Rotate clamp to position handle anywhere within 360°. Choice of three sizes.

CL-150-TPC (Metric No. CLM-150-TPC)

Small-size clamp with 3/4" plunger travel. Installs in a 5/8"-diameter drilled hole, or a 5/8-18 tapped hole (M16x1.5 in metric). Accepts any 1/4-20 spindle (M6 in metric). Shipping weight 0.4 lbs.

Holding capacity: 200 lbs

CL-250-TPC (Metric No. CLM-250-TPC)

Medium-size clamp with 1-1/2" plunger travel. Installs in a 3/4"-diameter drilled hole, or a 3/4-16 tapped hole (M20x1.5 in metric). Accepts any 5/16-18 spindle (M8 in metric). Shipping weight 0.7 lbs.

Holding capacity: 300 lbs

CL-350-TPC (Metric No. CLM-350-TPC)

Large-size clamp with 2-5/8" plunger travel. Installs in a 1"-diameter drilled hole, or a 1"-14 (M27x2 in metric) tapped hole. Accepts any 3/8-16 spindle (M10 in metric). Shipping weight 1.5 lbs.

Holding capacity: 700 lbs

Self-Adjusting Plunger**

These toggle clamps are the same size as our CL-250-TPC and CL-350-TPC on the opposite page, and feature our patented self-adjusting spring-loaded plunger. The self-adjusting version applies a consistent spring clamping force anywhere within its clamping range. This version locks only in the "push" direction, and cannot be tapped for a spindle. Compact plunger clamps for mounting through panels, plates, or angle brackets. Install in a drilled or tapped hole, securing with the locknut provided. Rotate clamp to position handle anywhere within 360°. **Patent no. 6,905,116.** Choice of two sizes.

CL-255-TPC

CL-255-TPC

This medium-size self-adjusting clamp applies a consistent spring clamping force of 100 lbs (+/-10%) anywhere within its .20" clamping range. 1-1/2" maximum plunger travel. Installs in a 3/4"-diameter drilled hole, or a 3/4-16 tapped hole. Shipping weight 0.7 lbs.

Spring force (±10%): 100 lbs

CL-355-TPC

CL-355-TPC

This large-size self-adjusting clamp applies a consistent spring clamping force of 200 lbs (+/-10%) anywhere within its .20" clamping range. 2-5/8" maximum plunger travel. Installs in a 1"-diameter drilled hole, or a 1"-14 tapped hole. Shipping weight 1.5 lbs.

Spring force (±10%): 200 lbs

LATCH-ACTION TOGGLE CLAMPS

Sizes marked * are also available in stainless steel

All Carr Lane Manufacturing toggle clamps are DFARS and RoHS compliant.

360 lbs* 700 lbs* 2000 lbs* 4000 lbs 7500 lbs

Adjustable U Bolt p. 489-493

Latch-action clamp with a threaded U bolt for adjustability. Supplied with matching latch plate (smallest three sizes). Large, comfortable handle grip. Available in five sizes.

500 lbs* 1000 lbs* 2000 lbs*

Right-Angle Adjustable U Bolt p. 494

Similar to the latch clamp above, except with its pulling direction perpendicular to the base. Supplied with matching latch plate. Large, comfortable handle grip. Available in three sizes.

375 lbs* 1000 lbs

Adjustable Hook p. 489

Popular hook-type latch clamp. Hook is threaded at one end for easy adjustment. Base rotates 90° to allow horizontal or vertical latching. Available in two sizes.

375 lbs*

Fixed Length p. 495

Latch clamp with fixed reach for installation where no length adjustment is required. Adjustable stop allows latching at different heights.

LATCH-ACTION TOGGLE CLAMPS

INFO+: SEE PAGE 439 FOR MATERIAL SPECIFICATIONS

Latch clamp with a versatile hook for grasping a rod or rim. Hook is threaded at one end to allow adjustment after mounting. Base pivots to allow horizontal or vertical latching. Choice of two sizes. Optional latch plate can be mounted as shown in the drawings, or reversed, for mounting flexibility.

CL-250-PA

Medium-size latch clamp with a 4-inch drawing movement. Threaded hook allows a 5/16-inch adjustment range. Shipping weight 0.8 lbs. Order matching latch plate CL-250-PA-L separately (CL-250-PA-S-L in stainless).

Holding capacity: 375 lbs

CL-350-PA

Large-capacity latch clamp with 6-1/8-inch drawing movement. Threaded hook allows a 3/4-inch adjustment range. Shipping weight 2.5 lbs. Order matching latch plate CL-350-PA-L separately.

Holding capacity: 1000 lbs

CL-257-PA

Same as CL-250-PA except with a manual safety lock. Push knob in to lock, pull knob out to unlock.

AIR-POWERED CLAMPS

All Carr Lane Manufacturing toggle clamps are DFARS and RoHS compliant.

Toggle Hold-Down Clamps p. 502-506

Similar to a vertical-handle hold-down clamp, except linkage is operated by a double-acting air cylinder instead of by hand. Toggle linkage provides high holding capacity and insures positive mechanical locking even if air pressure fails. Complete selection of accessories including clamping valves, check valves, exhaust mufflers, and air fittings.

FLAT-CUSHION SPINDLES

This is the standard spindle supplied with most clamps. Molded neoprene tip provides medium clamping force with some compensation for part-size variation. Also provides scratchfree clamping. Neoprene cushion has a durometer hardness of 70 shore A, and an operating temperature range of -40°F to 220°F. Spindle is fully threaded for maximum adjustment range. Assembly includes two jam nuts.

FLAT-CUSHION SPINDLES, QUICK ADJUSTING

Same as the Flat-Cushion Spindles above, except with two knurled nuts, instead of hex jam nuts, for convenient hand tightening. Use for quick spindle adjustment in applications where high-torque tightening with a wrench is not required.

POLYURETHANE FLAT CUSHIONS

Polyurethane cushions are tougher and slightly harder than standard neoprene cushions. Ideal when greater clamping force is required while still providing scratchfree clamping and some compensation for part-size variation. Molded-in stainless steel insert provides superior thread strength. Ideal for making custom-length Flat Cushion Spindles by inserting a threaded stud. Polyurethane cushion has a hardness 85 Shore A, operating temperature range -90°F to 200°F.

GLOW WAGON BRAKES

CLAMP BODY: 1215, 1008, 1010, AND/OR 1018 STEEL, ZINC PLATED BLACK CHROMATE
 RIVETS: 400-SERIES STAINLESS
 HANDLE: GLOW-IN-THE-DARK VINYL

Medium-sized clamp locks in extended or retracted position.

CL-150-SPC-BZ

Wagon Brakes with a black finish and glow-in-the-dark handles are specifically designed for use on stage-set designs, but can be used with other mobile jigs and carts. Wagon Brakes provide secure stabilization of your set designs, the ability to effortlessly re-arrange sets in an instant, and safety for your crew with special handles that glow in the dark for at least 8 hours. Glow-in-the-dark handles reduce the worry of trip hazards for stagehands as they work to set the scene.

Wagon Brakes literally lift your scenery off its movable casters, securing it in place and preventing any movement until you are ready to change the scene. A rugged toggle action provides the mechanical advantage to make lifting easy, and locks “over center” for safety. No drilling is ever required on your stage floor – just lock these Wagon Brakes in place to secure your stage set underneath the actors’ feet.

The medium-size plunger clamp shown here (CL-150-SPC-BZ) has a 1-1/4” plunger travel, is tapped to accept any 5/16-18 threaded foot and has a 300 lbs holding capacity. CL-250-SPC-BZ has a 1-5/8” plunger travel, is tapped to accept any 3/8-16 threaded foot and has an 800 pound holding capacity. Both lock in extended and retracted position. Made in USA.

BUSHING SELECTION

INCH				METRIC			
P	- 20	- 8	- .1250	PM	- 8	- 12	- 4.50
Type	OD in 64ths of an inch	Length in 16ths of an inch	ID as 4-place decimal inch	Type	OD in mm	Length in mm	ID as 2-place decimal mm

PRESS FIT:

Types **P**, **PC** (carbide), and **PM** (metric). This is the most-popular and least-expensive drill bushing. P bushings are permanently pressed into the jig plate, usually flush with the top surface. They are generally used for single-step drilling or reaming operations when you do not expect to replace bushings during the tooling's lifetime. P bushings can be mounted closer together than headed bushings, but offer less resistance to heavy axial loads.

HEAD PRESS FIT:

Types **H**, **HC** (carbide), and **HM** (metric). Similar to a P bushing, but with a head to resist heavy axial loads. H bushings are permanently pressed into the jig plate. They are generally used for single-step drilling or reaming operations when you do not expect to replace bushings during the tooling's lifetime. The head can be left exposed, or recessed by counterboring the installation hole. Note: The "length" listed for an inch head-press-fit bushing refers to its length under the head, while the metric version's "length" is its overall length.

SERRATED PRESS FIT:

Types **SP** and **SPM** (metric). Similar to a P bushing, but with top serrations to prevent rotation in soft materials. Recommended in high-torque situations for materials such as magnesium, aluminum, masonite, or wood. Finish-ground OD ensures accurate ID location. Serrations also resist axial force to prevent pushing the bushing through the jig plate.

SLIP/FIXED RENEWABLE:

Types **SF**, **SFC** (carbide), and **SFM** (metric). Replaceable bushing generally used with a liner bushing and lockscrew. Use when you expect to replace bushings during the tooling's lifetime, or when you want to switch bushings to perform multi-step operations with the same tooling. SF bushings combine the benefits of older S-type slip-renewable and F-type fixed-renewable bushings: One side has a small recess for fixed mounting; the other has a locking recess that allows the bushing to slip down, then lock in place by rotating it. S and F types are now obsolete and combination SF bushings will be furnished at no extra charge.

FLAT MILLED RENEWABLE:

Types **FM** and **FMC** (carbide). Replaceable bushing used for extra resistance to rotational forces under harsh conditions. This bushing, generally used with a liner, has a milled locking flat to allow fastening securely with a flat clamp. FM bushings also have a standard recess on the other side to allow using a lockscrew instead.

LINER:

Types **L** and **PM** (metric). Liners are permanent bushings used to hold renewable drill bushings. The liner's ID has a precise sliding fit with the renewable bushing's OD. The hardened liner accurately locates the renewable bushing and protects the jig plate from wear caused by frequent bushing replacement. Note: Metric liner bushings are the same as metric press-fit bushings.

HEAD LINER:

Types **HL** and **HM** (metric). Similar to an L bushing, but with a head to resist heavy axial loads. Head liners are permanent bushings used to hold renewable drill bushings. The head liner's ID has a precise sliding fit with the renewable bushing's OD. The hardened head liner accurately locates the renewable bushing and protects the jig plate from wear caused by frequent bushing replacement. Note: The "length" listed for a head liner refers to its overall length, not its length under the head. Metric head-liner bushings are the same as metric head-press-fit bushings.

UN-A-LOK™ LINER:

Types **UL** and **ULM** (metric). Similar to an HL head liner, but incorporating a special locking tab that eliminates the need for a lockscrew. Un-A-Lok liners are permanent bushings used to hold SF renewable drill bushings (on the "slip" side only, not the "fixed" side). Although slightly more expensive than a head liner plus a lock screw, installation time is dramatically reduced.

CHIP BREAKER:

Types **CH** and **CHM** (metric). Similar to an SF renewable bushing, but with specially designed chip-breaking notches on the drill-exit end. Use to break up chips from tough, stringy materials, to reduce friction and heat buildup. Reduces bushing wear at the drill-exit end and reduces the chance of tool or workpiece damage. A chip-breaker bushing should extend beyond its liner to allow chips to escape. Chip breakers are also available on other bushing types such as P, H, and DC.

BUSHING SELECTION

DIRECTED COOLANT:

Types **DC**, **DCCH** (chip breaker), **DCL** (liner), and **DCHL** (head liner). Similar to an SF renewable bushing, but with passages to direct coolant to the cutting area. This design is particularly good for washing away chips, especially when ordered as the combination Directed Coolant Chip Breaker (DCCH). DC bushings require special liners, DCL or DCHL, to direct coolant from a drilled manifold passage to the holes in the bushing's OD wall.

OIL GROOVE:

Oil grooves are available on most drill-bushing types, including P, H, and SF. Use when you need complete drill lubrication and cooling, such as when drilling hardened steel. Oil grooves are specially designed coolant passageways in the bushing's ID wall. Choose from 25 different groove styles. End wipers are also available, to keep out dirt and chips.

DIAMOND GROOVE:

Types **DG** and **DGM** (metric). A bushing for cast-in-place or potted installation. Diamond-knurled OD provides superior holding strength against both rotational and axial forces. Since the bushing's OD is not ground, keep the ID accurately located during casting or potting to ensure accuracy in the finished tool.

SERRATA GROOVE:

Type **SG**. Can be cast in place or potted, just as a diamond-groove bushing, or can also be pressed into an installation hole. Straight knurl provides less resistance to axial loads than the diamond knurl on a DG bushing. Since the bushing's OD is not ground, keep the ID accurately located during casting or potting to ensure accuracy in the finished tool.

DIAMOND-KNURL UN-A-LOK™ LINER:

Types **ULD** and **ULDM** (metric). A liner for cast-in-place or potted installation, used to hold SF renewable drill bushings. Un-A-Lok™ liners incorporate a special locking tab that eliminates the need for a lockscrew. Holds only the "slip" side of an SF bushing, not the "fixed" side. Diamond-knurled OD provides superior holding strength against both rotational and axial forces. Since the bushing's OD is not ground, keep the ID accurately located during casting or potting to ensure accuracy in the finished tool.

EZ CAST LINER:

Type **EZ**. Another liner for cast-in-place or potted installation, used to hold SF renewable drill bushings. Unlike diamond-knurl unlock liners, EZ-cast liners hold either the "slip" or "fixed" side of an SF bushing, since they include an integral lockscrew holder. Diamond-knurled OD provides superior holding strength against both rotational and axial forces. Since the bushing's OD is not ground, keep the ID accurately located during casting or potting to ensure accuracy in the finished tool.

GUN DRILL:

Types **GD**, **GDL** (liner), and **GDI** (insert). Drill bushings for gun-drilling machines, such as Eldorado, Drillmation, DeHoff, and Lahr. Gun drill bushings are similar to SF renewable bushings, but with the drill bearing at the bushing's head end. Depending on the gun-drilling machine, bushings are either one-piece or two-piece (a liner and an insert).

TEMPLATE:

Type **TB**. An economical bushing designed for thin template jig plates from 1/16- to 3/8-inch thick. Bushings are held in place by a retainer ring. The OD serrations prevent the bushing from spinning. Bushings can be removed and reused by breaking the aluminum retainer ring (extra retainer rings available).

CIRCUIT BOARD:

Types **CB** and **CBC** (carbide). Headless and head-type bushings made especially for circuit-board drilling machines. Available for Electro-Mechano, Excellon, Waco, Digital, Nationwide, Edlund, Tektronix, Leland-Gifford, Palomar, Hughes, Rapidrill, and Reliable drilling machines.

AIR-FEED DRILL:

Type **A**. Drill-bushing shanks, collars, adaptors, and locking accessories for air-feed drills, tappers, and back-spotfacers. Available for all standard drill motors, including Gardner-Denver, Keller, Aro, Buckeye, Quackenbush, Desoutter, and Ingersoll-Rand.

INSTALLATION AND TECHNICAL DATA

RECOMMENDED CHIP CLEARANCE:

To minimize drill bending and maximize hole accuracy, mount drill bushings as close to the workpiece as possible while still allowing adequate chip clearance. The necessary clearance depends on workpiece material and chip stringiness. For example, cast iron, with fine chips requires about 1/2 times drill diameter for chip clearance. Materials that produce long, stringy chips, such as cold-rolled steel and aluminum, require at least one-drill-diameter clearance. To reduce clearance even with long, stringy chips, exit-end chip breakers are available.

Direct workpiece contact is usually not recommended. Chips can escape only up through the drill's flutes, drill-bearing length is shortened by the drill point's length, and drill-withdrawal burrs can raise the jig plate. Direct contact may be necessary, though, for maximum bearing length when drilling sloped surfaces (see below). Also, reamer bushings can be mounted much closer than drill bushings, due to much finer chips, for more-accurate hole finishing.

SPECIAL BUSHINGS FOR SLOPED WORKPIECE SURFACES:

Whenever the drilling axis is not perpendicular to the workpiece surface, locate the exit end as close to the part as possible. Otherwise the drill will tend to wander. For maximum drill guiding, we recommend specifying bushings with an angle milled on the exit end, tangent to the workpiece surface at point of entry.

SPECIAL BUSHINGS FOR CLOSE HOLE SPACING:

When holes are located close together, special bushings are sometimes required. Thinwall bushings, where the bushing ID is larger than the normal ID range for a given OD, are often a good solution. Holes for thinwall bushings must be very accurate and round, because these bushings are more easily distorted. For very-close hole spacing, especially with headed bushings, specify bushings with ground flats.

INSTALLATION-HOLE PREPARATION FOR PRESS-FIT BUSHINGS:

To avoid jig-plate or bushing distortion, do not use excessive interference fits on press-fit bushings. See tables on opposite page for recommended hole sizes in unhardened steel or cast iron jig plates. Always prepare installation holes using a jig borer or reamer. Standard chucking reamers (with a plus tolerance) usually produce installation holes to the tolerances shown in the table. Other factors to consider are: (1) headed bushings require less interference to resist drilling thrust; (2) longer bushings in thick plates require less interference; (3) bushings with thinner walls are more prone to distortion; (4) less-ductile jig-plate materials require less interference.

95mm	95.093-95.071mm	95.000-95.035mm
105mm	105.101-105.079mm	105.000-105.035mm
115mm	115.101-115.079mm	115.000-115.035mm
125mm	125.117-125.092mm	125.000-125.040mm

We recommend installing bushings with an arbor press whenever possible. If the bushing's OD is large enough, you can also use a drawbolt with two washers as shown above. If a hammer is the only tool available, do not strike the bushing directly or it could fracture. Use a soft-metal punch to cushion the blows. Before installing a press-fit bushing, lubricate the inside of the mounting hole and outside of the bushing with a lubricant such as lithium grease. Otherwise the bushing may score the mounting hole, and may be difficult to replace later.

GROUND LEAD FOR EASY INSTALLATION:

All bushings feature a concentric ground lead and a 45° chamfer on the exit end to ensure perfect alignment during installation.

INSTALLATION AND TECHNICAL DATA

DRILL ENTRANCE RADIUS:

Bushings feature a blended and polished radius at the drill-entrance end for smooth drill entry and proper alignment, preventing drill wear and breakage. Radius size varies in proportion to drill size.

COUNTERBORES ON LONG BUSHINGS:

Long bushings with small IDs are slightly counterbored for proper drill-bearing length and chip clearance, as specified by ANSI standards. Counterbores prevent binding and heat buildup due to excessive bearing length. **INFO+:** See chart on page 521 for ANSI counterbore depths. Counterbore diameters are generally 1/32 inch larger than the inside diameter, and are angled at the bottom for smooth entrance. No-counterbore bushings are available on request as specials.

UNGROUND BUSHINGS AVAILABLE FOR OVERSIZE HOLES:

We offer bushings with unfinished ODs for custom-fitting to oversize holes. They are slightly larger than nominal diameter to provide grinding stock, .005-.020 extra, depending on the OD size (see charts under each specific bushing type). We recommend grinding on a mandrel to hold ID/OD concentricity.

CONCENTRICITY:

Bushing OD is ground concentric to the ID to within .0003 TIR for ID sizes from 1/8 inch to 1/2 inch (3mm to 12mm), unless otherwise indicated. For larger or smaller sizes, concentricity is within .0005 TIR. Unground bushings are concentric to within .006 TIR. On counterbored bushings, concentricity applies only over the drill-bearing length.

OTHER TOLERANCES:

Any dimensions where tolerances are not specifically listed are held to +/- .015 inches on standard ANSI sizes. Special tolerances for any dimension are available on request as specials.

MATERIAL:

Standard drill-bushing material is 1144 or 52100 steel, heat treated to achieve RC 62-64 ID hardness, and other high-carbon steels. Optional materials such as tungsten carbide (Grade C2 carbide with steel head), 52100 steel, A2 tool steel, D2 tool steel, M2 tool steel, 416 stainless, 440C stainless, 17-4PH stainless, 303 stainless, 660 bronze, Ampco 18 bronze, Ampco 21 bronze, Oilite, and brass are available as specials.

QUICK SHIP DRILL BUSHINGS

Quick-Ship Drill Bushings are popular bushing sizes that we do our best to keep in stock and ready for same-day shipment 100% of the time. These bushings include most common ID drill sizes.

PRESS FIT BUSHINGS

APPLICATIONS:

This is the most-popular and least-expensive drill bushing. P bushings are permanently pressed into the jig plate, usually flush with the top surface. They are generally used for single-step drilling or reaming operations when you do not expect to replace bushings during the tooling's lifetime. P bushings can be mounted closer together than headed bushings, but offer less resistance to heavy axial loads.

ORDERING EXAMPLES:

P-20-16-.1250	Standard inch bushing, inch ID
P-20-16-.1772	Standard inch bushing, mm ID (.1772 = 4.50mm)
P-20-16U-.1250	Unground OD
P-20-16-.1250 REAMER	Reamer tolerance on ID
P-20-16-.1250 NCB	No counterbore on long bushings marked with * (no counterbore is standard on all other bushings)
PC-20-16-.1250	Carbide bushing
PM-8-12-4.50	Standard metric bushing

Standard prices apply only to bushings with a standard-drill-size ID within the stated ID range. See catalog back cover for standard drill sizes and their decimal equivalents. For prices on non-standard ID sizes, including reamer-tolerance and tap-guide bushings, please contact factory.

STANDARD ID TOLERANCES:

From #80 to 1/4" + .0001/+0.0004	From .35 to 3mm +.002/+0.008mm
Over 1/4 to 3/4" + .0001/+0.0005	Over 3 to 6mm +.004/+0.012mm
Over 3/4 to 1-1/2" + .0002/+0.0006	Over 6 to 10mm +.005/+0.014mm
Over 1-1/2 to 2-3/4" + .0003/+0.0007	Over 10 to 18mm +.006/+0.017mm
	Over 18 to 30mm +.007/+0.020mm
	Over 30 to 50mm +.009/+0.025mm
	Over 50 to 80mm +.010/+0.029mm
	Over 80 to 120mm +.012/+0.034mm (G6 tolerance)

REAMER ID TOLERANCES:

From #60 to 1/4" + .0005/+0.0008	From 1 to 3mm +.006/+0.012mm
Over 1/4 to 1" + .0006/+0.0010	Over 3 to 6mm +.010/+0.018mm
Over 1" to 1-1/2" + .0008/+0.0012	Over 6 to 10mm +.013/+0.022mm
	Over 10 to 18mm +.016/+0.027mm
	Over 18 to 30mm +.020/+0.033mm (F6 tolerance)

* Small metric drill sizes through .80mm are counterbored 1.00mm diameter, with 3mm drill-bearing length.

HEAD PRESS FIT BUSHINGS

ORDERING EXAMPLES:

H-20-16-.1250	Standard inch bushing, inch ID
H-20-16-.1772	Standard inch bushing, mm ID (.1772 = 4.50mm)
H-20-16U-.1250	Unground OD
H-20-16-.1250 REAMER	Reamer tolerance on ID
H-20-16-.1250 NCB	No counterbore on long bushings marked with * (no counterbore is standard on all other bushings)
HC-20-16-.1250	Carbide bushing
HM-8-12-4.50	Standard metric bushing

Standard prices apply only to bushings with a standard-drill-size ID within the stated ID range. See catalog back cover for standard drill sizes and their decimal equivalents. For prices on non-standard ID sizes, including reamer-tolerance and tap-guide bushings, please contact factory.

APPLICATIONS:

Similar to a P bushing, but with a head to resist heavy axial loads. H bushings are permanently pressed into the jig plate. They are generally used for single-step drilling or reaming operations when you do not expect to replace bushings during the tooling's lifetime. The head can be left exposed, or recessed by counterboring the installation hole.

Note: The "length" listed for an inch head-press-fit bushing refers to its length under the head, while the metric version's "length" is its overall length.

STANDARD ID TOLERANCES:

From #80 to 1/4"	+0.001/+0.004	From .35 to 3mm	+0.02/+0.08mm

* Small metric drill sizes through .80mm are counterbored 1.00mm diameter, with 3mm drill-bearing length.

Note: The "length" listed on this page for a metric head-press-fit bushing refers to its overall length, while the inch version's "length" is its length under the head.

SERRATED PRESS FIT BUSHINGS

APPLICATIONS:

Similar to a P bushing, but with top serrations to prevent rotation in soft materials. Recommended in high-torque situations for materials such as magnesium, aluminum, masonite, or wood. Finish-ground OD ensures accurate ID location. Serrations also resist axial force to prevent pushing the bushing through the jig plate.

ORDERING EXAMPLES:

SP-26-16-.1875	Standard inch bushing, inch ID
SP-26-16-.1772	Standard inch bushing, mm ID (.1772 - 4.50mm)
SP-26-16-.1875 REAMER	Reamer tolerance on ID
SP-26-16-.1875 NCB	No counterbore on long bushings marked with * (no counterbore is standard on all other bushings)
SPM-8-12-4.50	Standard metric bushing

Standard prices apply only to bushings with a standard-drill-size ID within the stated ID range. See catalog back cover for standard drill sizes and their decimal equivalents. For prices on non-standard ID sizes, including reamer-tolerance and tap-guide bushings, please contact factory.

STANDARD ID TOLERANCES:

From #55 to 1/4"	+ .0001/+ .0004	From 1 to 3mm	+ .002/+ .008mm
		Over 3 to 6mm	+ .004/+ .012mm
Over 1/4 to 3/4"	+ .0001/+ .0005	Over 6 to 10mm	+ .005/+ .014mm
		Over 10 to 18mm	+ .006/+ .017mm
Over 3/4 to 1-1/2"	+ .0002/+ .0006	Over 18 to 19mm	+ .007/+ .020mm
			(G6 tolerance)

REAMER ID TOLERANCES:

From #60 to 1/4"	+ .0005/+ .0008	From 1 to 3mm	+ .006/+ .012mm
		Over 3 to 6mm	+ .010/+ .018mm
Over 1/4 to 1"	+ .0006/+ .0010	Over 6 to 10mm	+ .013/+ .022mm
		Over 10 to 18mm	+ .016/+ .027mm
		Over 18 to 19mm	+ .020/+ .033mm
			(F6 tolerance)

SLIP/FIXED RENEWABLE BUSHINGS

APPLICATIONS:

Replaceable bushing generally used with a liner bushing and lock screw. Use when you expect to replace bushings during the tooling's lifetime, or when you want to switch bushings to perform multi-step operations with the same tooling. SF bushings combine the benefits of older S-type slip-renewable and F-type fixed-renewable bushings: One side has a small recess for fixed mounting; the other has a locking recess that allows the bushing to slip down, then lock in place by rotating it. S and F types are now obsolete and combination SF bushings will be furnished at no extra charge.

ORDERING EXAMPLES:

- SF-20-16-.1250 Standard inch bushing, inch ID
- SF-20-16-.1772 Standard inch bushing, mm ID (.1772 = 4.50mm)
- SF-20-16-.1250 REAMER Reamer tolerance on ID
- SF-20-16-.1250 NCB No counterbore on long bushings marked with * (no counterbore is standard on all other bushings)
- SFC-20-16-.1250 Carbide bushing
- SFM-8-16-4.50 Standard metric bushing

Standard prices apply only to bushings with a standard-drill-size ID within the stated ID range. See catalog back cover for standard drill sizes and their decimal equivalents. For prices on non-standard ID sizes, including reamer-tolerance and tap-guide bushings, please contact factory.

STANDARD ID TOLERANCES:

From #80 to 1/4"	+0.001/+0.004	From .35 to 3mm	+0.02/+0.08mm
Over 1/4 to 3/4"	+0.001/+0.005	Over 3 to 6mm	+0.04/+0.12mm
Over 3/4 to 1-1/2"	+0.002/+0.006	Over 6 to 10mm	+0.05/+0.14mm
Over 1-1/2 to 2-3/4"	+0.003/+0.007	Over 10 to 18mm	+0.06/+0.17mm
		Over 18 to 30mm	+0.07/+0.20mm
		Over 30 to 50mm	+0.09/+0.25mm
		Over 50 to 80mm	+0.10/+0.29mm
		Over 80 to 120mm	+0.12/+0.34mm
		(G6 tolerance)	

REAMER ID TOLERANCES:

From #60 to 1/4"	+0.005/+0.008	From 1 to 3mm	+0.06/+0.12mm
Over 1/4 to 1"	+0.006/+0.010	Over 3 to 6mm	+0.10/+0.18mm
Over 1 to 1-1/2"	+0.008/+0.012	Over 6 to 10mm	+0.13/+0.22mm
		Over 10 to 18mm	+0.16/+0.27mm
		Over 18 to 30mm	+0.20/+0.33mm
		(F6 tolerance)

APPLICATIONS:

Replaceable bushing used for extra resistance to rotational forces under harsh conditions. This bushing, generally used with a liner, has a milled locking flat to allow fastening securely with a flat clamp. FM bushings also have a standard recess on the other side to allow using a lock screw instead.

ORDERING EXAMPLES:

FM-20-16-.1250	Standard inch Bushing, inch ID
FM-20-16-.1772	Standard inch Bushing, mm ID (.1772 = 4.50mm)
FM-20-16-.1250 REAMER	Reamer Tolerance on ID
FM-20-16-.1250 NCB	No counterbore on long bushings marked with * (no counterbore is standard on all other bushings)
FMC-20-16-.1250	Carbide Bushing

Standard prices apply only to bushings with a standard-drill-size ID within the stated ID range. See catalog back cover for standard drill sizes and their decimal equivalents. For prices on non-standard ID sizes, including reamer-tolerance and tap-guide bushings, please contact factory.

STANDARD ID TOLERANCES:

LINER BUSHINGS

APPLICATIONS:

Liners are permanent bushings used to hold renewable drill bushings. The liner's ID has a precise sliding fit with the renewable bushing's OD. The hardened liner accurately locates the renewable bushing and protects the jig plate from wear caused by frequent bushing replacement. Note: Metric liner bushings are the same as metric press-fit bushings.

ORDERING EXAMPLES:

L-32-16 Standard inch liner bushing
 L-32-16U Unground OD
 L-40-16-24 Standard inch liner bushing with a choice of ID in that OD size
 PM-18-25-12.00 Standard metric liner bushing (same as metric press-fit type)

STANDARD LINER ID TOLERANCES:

3/16 to 3/8"	+0.001/+0.004	8 to 10mm	+0.005/+0.014mm
7/16 to 5/8"	+0.002/+0.005	12 to 18mm	+0.006/+0.017mm

APPLICATIONS:

Similar to an L bushing, but with a head to resist heavy axial loads. Head liners are permanent bushings used to hold renewable drill bushings. The head liner's ID has a precise sliding fit with the renewable bushing's OD. The hardened head liner accurately locates the renewable bushing and protects the jig plate from wear caused by frequent bushing replacement. Note: The "length" listed for a head liner refers to its overall length, not its length under the head. Metric head-liner bushings are the same as metric head-press-fit bushings.

ORDERING EXAMPLES:

HL-32-16 Standard inch liner bushing
 HL-32-16U Unground OD
 HM-18-25-12.00 Standard metric liner bushing (same as metric press-fit type)

18mm	13mm	22mm	4mm
22mm	15.5mm	26mm	4mm
26mm	17.5mm	30mm	4mm

APPLICATIONS:

Similar to an HL head liner, but incorporating a special locking tab that eliminates the need for a lockscrew. Un-A-Lok™ liners are permanent bushings used to hold SF renewable drill bushings (on the “slip” side only, not the “fixed” side). Although slightly more expensive than a head liner plus a lockscrew, installation time is dramatically reduced. **Patent no. 3,015,242 and 3,099,079.**

ORDERING EXAMPLES:

UL-20-5	Standard inch liner bushing
UL-20-5U	Unground OD
ULM-12-10	Standard metric liner bushing

BUSHING HANDLES

QUICK-CHANGE HANDLE: ALUMINUM WITH 1144 STEEL UN-A-LOK LINER
PERMANENT HANDLE: MILD STEEL

Quick-Change Bushing Handle

Quick-Change Bushing Handles are ready to hold any Slip/Fixed Renewable Drill Bushing in a choice of three OD sizes – 3/16, 5/16, or 1/2". These comfortable, high-quality handles provide convenient handling and extra support when using a portable drill motor. A Un-A-Lok liner bushing permanently installed in the handle provides excellent wear resistance and quick bushing changes. The handle is provided with a hole in the end for cable attachment.

PART NO.	SF BUSHING OD
CL-12-BHQC	3/16
CL-20-BHQC	5/16
CL-32-BHQC	1/2

Permanent Bushing Handle

Permanent Bushing Handles are designed for one-time installation of a Slip/Fixed Bushing directly into the steel handle, where it is fastened with a tamper-resistant one-way screw to create a permanent assembly.

LOCKSCREWS AND CLAMPS

LOCKSCREWS

The most popular locking device for renewable drill bushings. Use on either the "slip" or "fixed" side of a slip-fixed bushing. Simple, strong, compact, and economical.

ROUND CLAMPS

13

Alternative to lock screws when using the "fixed" side of a slip-fixed SF bushing. Round clamps have less clearance under their heads, to clamp bushings tighter (which is why you cannot use them on the bushing's "slip" side). Use them with a Socket-Head Cap Screw.

LOCKSCREWS AND CLAMPS

ROUND END CLAMPS

A heavy-duty alternative to lockscrews. Allows locating tapped hole farther away from bushing to avoid interference with a larger liner. Use on either the "slip" or "fixed" side of a slip-fixed renewable bushing. Available in two heights: standard for recessed liner mounting; tall for projected head-liner mounting. Use with a Socket-Head Cap Screw.

APPLICATIONS:

Similar to an SF renewable bushing, but with specially designed chip-breaking notches on the drill-exit end. Use to break up chips from tough stringy materials, to reduce friction and heat buildup. Reduces bushing wear at the drill-exit end and reduces the chance of tool or workpiece damage. A chip-breaker bushing should extend beyond its liner to allow chips to escape. Chip breakers are also available on other bushing types such as P, H, and DC (directed coolant).

ORDERING EXAMPLES:

- CH-20-16-.1250 Standard inch SF-type bushing with chip breaker, inch ID
 CH-20-16-.1772 Standard inch SF-type bushing with chip breaker, mm ID (.1772 = 4.50mm)

- CH-20-16-.1250 NCB No counterbore on long bushings marked with * (no counterbore is standard on all other bushings)
 CHM-10-20-4.50 Standard metric SF-type bushing with chip breaker
 PCH-20-16-.1250 P bushing with chip breaker
 HCH-20-16-.1250 H bushing with chip breaker
 DCCH-20-16-.1250 Directed coolant bushing with chip breaker

** Q = 3/16, U = 39/64, V = 5/32 on 1/2" long liner bushings.

APPLICATIONS:

Similar to an SF renewable bushing, but with passages to direct coolant to the cutting area. This design is particularly good for washing away chips, especially when ordered as the combination Directed Coolant Chip Breaker (DCCH). DC bushings require special liners, DCL or DCHL, to direct coolant from a drilled manifold passage to the holes in the bushing's OD wall. **INFO+**: Important note: Always order matching liner length.

ORDERING EXAMPLES:

DC-20-12-1250	Standard inch directed-coolant bushing, inch ID
DCCH-20-16-1250	Same as above, except with chip breakers (go to next length so that chip breakers extend beyond the liner)
DC-20-12-1772	Standard inch directed-coolant bushing, mm ID (.1772 = 4.50 mm)
DC-20-12-1250 REAMER	Reamer tolerance on ID
DC-20-12-1250 NCB	No counterbore on long bushings marked with * (no counterbore is standard on all other bushings)
DCL-32-12	Liner for renewable bushings above
DCHL-32-12	Head liner for renewable bushings above

OIL-GROOVE BUSHINGS

APPLICATIONS:

Oil grooves are available on most drill-bushing types, including P, H, and SF. Use when you need complete drill lubrication and cooling, such as when drilling hardened steel. Oil grooves are specially designed coolant passageways in the bushing's ID wall. Choose from 25 different groove styles. End wipers are also available, to keep out dirt and chips.

ORDERING EXAMPLES:

P-48-16-.5000-AJ	P bushing with AJ oil groove, inch ID
P-48-16-.4724-AJ	P bushing with AJ oil groove, mm ID (.4724 = 12.00mm)
P-48-16-.5000-AJ-AAA	P bushing with AJ oil groove and AAA wiper
SF-48-16-.5000-AJ	SF bushing with AJ oil groove

THREE GENERAL TYPES:

1. With oil hole. A single radial hole in the bushing wall allows coolant to flow from a manifold passage to the internal oil grooves. Bushing must be installed to line up the radial hole with the manifold passage.

2. With oil hole and external groove. OD groove allows coolant to flow around the bushing, then through the radial hole in the bushing's wall to the internal oil grooves. Allows installing the bushing at any orientation, and mounting bushings in series using a single manifold passage. This type is our most popular.

3. Without oil feed. No external coolant feed through a manifold passage, so all coolant enters through the top. This type is also commonly used as a bearing bushing, packed with oil or grease.

OIL-GROOVE STYLES:

We offer a wide selection of oil-groove styles in each general type. This allows choosing a style to suit various operating conditions, lubrication requirements, and individual preferences.

OPTIONAL WIPERS:

To guard against dirt and chips entering the bushing ID, order oil-groove bushings with a wiper end. Note: do not order an oil-groove style that breaks out at the wiper end (AA, AB, AG, AH, AD, or AE). Order style AAA for headless bushings (install wiper in either direction). Order style ABB or ACC for head-type bushings.

TECHNICAL DATA:

Oil-groove dimensions - 1/16" wide x 1/32" deep
 Oil-hole dimensions - 1/4" diameter
 External-groove dimensions - 5/16" wide x 3/64" deep
 Allowable ID range - 1/2" to 8"
 Allowable length range - 1/2" to 8"
 Oil grooves stop 1/8" short of bushing end.

DIAMOND-GROOVE BUSHINGS

DG

APPLICATIONS:

A bushing for cast-in-place or potted installation. Diamond-knurled OD provides superior holding strength against both rotational and axial forces. Since the bushing's OD is not ground, keep the ID accurately located during casting or potting to ensure accuracy in the finished tool.

ORDERING EXAMPLES:

DG-26-16-.1875	Standard inch bushing, inch ID
DG-26-16-.1772	Standard inch bushing, mm ID (.1772 = 4.50mm)
DG-26-16-.1875 REAMER	Reamer tolerance on ID
DG-26-16-.1875 NCB	No counterbore on long bushings marked with * (no counterbore is standard on all other bushings)
DGM-8-12-4.50	Standard metric bushing

Standard prices apply only to bushings with a standard-drill-size ID within the stated ID range. See catalog back cover for standard drill sizes and their decimal equivalents. For prices on non-standard ID sizes, including reamer-tolerance and tap-guide bushings, please contact factory.

STANDARD ID TOLERANCES:

From #55 to 1/4"	+ .0001/+ .0004	From 1 to 3mm	+ .002/+ .008mm
		Over 3 to 6mm	+ .004/+ .012mm

SERRATA-GROOVE BUSHINGS

SG

APPLICATIONS:

Can be cast in place or potted, just as a diamond-groove bushing, or can also be pressed into an installation hole. Straight knurl provides less resistance to axial loads than the diamond knurl on a DG bushing. Since the bushing's OD is not ground, keep the ID accurately located during casting or potting to ensure accuracy in the finished tool.

ORDERING EXAMPLES:

SG-26-16-.1875 Standard inch bushing, inch ID
 SG-26-16-.1772 Standard inch bushing, mm ID
 (.1772 = 4.50mm)
 SG-26-16-.1875 REAMER Reamer tolerance on ID
 SG-26-16-.1875 NCB No counterbore on long bushings
 marked with * (no counterbore is
 standard on all other bushings)

Standard prices apply only to bushings with a standard-drill-size ID within the stated ID range. See catalog back cover for standard drill sizes and their decimal equivalents. For prices on non-standard ID sizes, including reamer-tolerance and tap-guide bushings, please contact factory.

STANDARD ID TOLERANCES:

15mm	11mm	18mm	3mm
18mm	13mm	22mm	4mm
22mm	15.5mm	26mm	4mm
26mm	17.5mm	30mm	4mm

APPLICATIONS:

A liner for cast-in-place or potted installation, used to hold SF renewable drill bushings. Un-A-Lok™ liners incorporate a special locking tab that eliminates the need for a lockscrew. Holds only the “slip” side of an SF bushing, not the “fixed” side. Diamond-knurled OD provides superior holding strength against both rotational and axial forces. Since the bushing’s OD is not ground, keep the ID accurately located during casting or potting to ensure accuracy in the finished tool.

ORDERING EXAMPLES:

ULD-20-5 Standard inch liner bushing
 ULDM-12-10 Standard metric liner bushing

EZ-CAST LINER BUSHINGS

EZ

APPLICATIONS:

Another liner for cast-in-place or potted installation, used to hold SF renewable drill bushings. Unlike diamond-knurl unlock liners, EZ-cast liners hold either the “slip” or “fixed” side of an SF bushing, since they include an integral lockscrew holder. Diamond-knurled OD provides superior holding strength against both rotational and axial forces. Since the bushing’s OD is not ground, keep the ID accurately located during casting or potting to ensure accuracy in the finished tool.

ID RANGE	OD	LENGTH	PART NO.
5/16 .3126-.3129	1/2 .525-.510	1/2	EZ-32-8

ORDERING EXAMPLE:

EZ-32-8 Standard inch liner bushing

STANDARD LINER ID TOLERANCES:

5/16"	+0.0001/+0.0004
1/2"	+0.0002/+0.0005
3/4"	+0.0003/+0.0006
1"	+0.0004/+0.0007

TEMPLATE BUSHINGS

TB

APPLICATIONS:

An economical bushing designed for thin template jig plates from 1/16 to 3/8" thick. Bushings are held in place by a Retainer Ring (order Retainer Ring and Installation Tool separately). The OD serrations prevent the bushing from spinning. Bushings can be removed and reused by breaking the aluminum Retainer Ring (extra rings available separately).

ORDERING EXAMPLES:

TB-24-6-4-.1250 Bushing with 1/8" ID
 TR-10 Matching Retainer Ring for 1/16" thick template
 TR-30 Matching Retainer Ring for 1/8" thick template

Standard prices apply only to bushings with a standard-drill-size ID within the stated ID range. See catalog back cover for standard drill sizes and their decimal equivalents. For prices on non-standard ID sizes, including reamer-tolerance and tap-guide bushings, please contact factory.

STANDARD ID TOLERANCES:

#55 to 1/2" +.0001/+0.011 | 1.30 to 12mm +.002/+0.030mm

CONCENTRICITY:

ID concentric with OD to within .002 TIR

INSTALLATION STEPS

1. LAY OUT HOLES

When laying out holes, observe the minimum hole spacing and edge distance listed below:

BUSHING OD	A MINIMUM	B MINIMUM
3/8	.60	.250
1/2	.73	.312
3/4	.98	.438

2. REAM AND COUNTERSINK

Ream hole .001 to .003 larger than bushing OD. Countersink reamed hole to allow the bushing to seat .015 below flush with surface. For best results, use a piloted countersink tool so that the countersink is concentric and free of chatter marks.

3. INSTALL

Install Retainer Ring with an arbor press whenever possible. The Installation Tool is also tapped for mounting on a rivet gun or other impact tool. Check that Retainer Ring top surface is within +.005 / -.010 of the bushing groove's top edge before installing.

THREADED TEMPLATE BUSHINGS

Retainer Ring (TTR)

Threaded Template Bushing (TTB)

STANDARD ID TOLERANCE:

From #55 to 1/2" +.0001/+0.0015
(ID concentric with OD to within .002" TIR)

INSTALLATION:

Drill hole in jig plate to nominal bushing OD (B diameter). Countersink 90° to allow bushing to seat flush to .015" below surface of plate (standard version only, not flanged version). Install and tighten Retainer Ring to secure. To make Retainer Ring installation easier, we offer a handy Socket-Type Installation Tool that fits 1/4" square drives.

APPLICATIONS:

This economical bushing is designed for thin template jig plates from 3/64 to 3/8" thick. Bushings are held in place by a threaded Retainer Ring (order separately). Left-hand thread is self tightening during drilling to prevent the Retainer Ring from loosening. Flush contact of the Retainer Ring against the jig plate ensures perpendicular drill alignment. OD serrations prevent the bushing from rotating during drilling. Choose standard countersunk type for flush mounting, or flanged type for installation without countersinking the jig plate. Threaded Template Bushings can be easily removed to replace or reuse.

ORDERING EXAMPLES:

Available in 3/8", 1/2", 5/8", 3/4", and 1" OD sizes. Standard prices apply to standard bushings only, with any standard inch or metric ID size within the stated range.

- TTB-24-1250 Bushing with 1/8" ID
- TTR-24-3 Matching Retainer Ring for 1/4" thick template

APPLICATIONS:

These bushings are for gun-drilling machines, such as Eldorado, Drillmation, deHoff, and Lahr. Gun-drill bushings are similar to SF renewable bushings, but with the drill bearing at the bushing's head end. Depending on the gun-drilling machine, bushings are either one-piece or two-piece (a liner and an insert).

ORDERING EXAMPLE:

GDL-112-28-20 Liner for any insert with a 5/16 OD

Standard prices apply only to bushings with a standard-drill-size ID within the stated ID range. See catalog back cover for standard drill sizes and their decimal equivalents. For prices on non-standard ID sizes, including reamer-tolerance and tap-guide bushings, please contact factory.

AIR FEED BUSHINGS

ADAPTOR TIP ASSEMBLY

To mount air-feed drill, insert in liner and turn 30° counterclockwise to lock.

STANDARD AIR-FEED DRILLS

COOLANT-TYPE AIR-FEED DRILLS

MOUNTING OPTIONS

TAPER-LOK LINERS

New-design one-piece lock liner has angular locking surfaces for superior strength. Allows very close hole spacing. Hold in place with a lock nut. Also available knurled for installing in plastic tooling.

LOCK LINERS

Conventional lock liner incorporating two lock screws. Hold in place with a lock nut.

TAPER-LOK AIR-FEED LOCKSCREWS

New-design lock screw especially for air-feed drills. Angular locking surface for superior strength. Install two lock screws and a liner directly in jig plate.

LOCKSCREWS

Conventional-style lock screws. Install two lock screws and a liner bushing directly in jig plate.

LOCK STRIPS

Allows the closest possible hole spacing. Use together with liner bushings.

AIR FEED BUSHINGS

APPLICATIONS:

Drill-bush shanks, collars, adaptors, and locking accessories for air-feed drills, tappers, and back-spotfacers. Available for all standard drill motors, including Gardner-Denver, Keller, Aro, Buckeye, Quackenbush, Desoutter, and Ingersoll-Rand.

CONSTRUCTION:

Adaptor-tip assemblies consist of two pieces: a locking collar and a pressed-in shank. The collar screws into the air-feed-drill nosepiece, precisely aligns the shank, and locks the drill in place by rotating 30° counter-clockwise after mounting. Shanks and collars can be ordered separately for replacement purposes.

ORDERING EXAMPLES:

A-21101-.1250	Complete adaptor-tip assembly
21101-.1250	Shank only
21000	Collar only
A-21101-.1250-C	Complete assembly with contour nose
21101-.1250-C	Shank only, with contour nose
A-11101-.1250	Coolant-type assembly
A-11101-.1250-C	Coolant-type assembly with contour nose

Standard prices apply only to bushings with a standard-drill-size ID within the stated ID range. See catalog back cover for standard drill sizes and their decimal equivalents. For prices on non-standard ID sizes, including reamer-tolerance and tap-guide bushings, please contact factory.

STANDARD ID TOLERANCES:

From #70 to 1/4"	+0.001/+0.004	From 1 to 3mm	+0.002/+0.008mm
Over 1/4 to 3/4"	+0.001/+0.005	Over 3 to 6mm	+0.004/+0.012mm
Over 3/4 to 1-1/2"	+0.002/+0.006	Over 6 to 10mm	+0.005/+0.014mm
		Over 10 to 18mm	+0.006/+0.017mm
AT-Type	+0.000/+0.003	Over 18 to 30mm	+0.007/+0.020mm

OPTIONAL COOLANT TYPE:

For coolant-inducing air-feed drills. Special shanks, collars, and reducers with internal coolant passages. Contact factory for pricing.

OPTIONAL CONTOUR NOSE:

Angular-nose shank recommended for close drilling along sloped or curved surfaces. Available on standard and coolant-type shanks. To order, add "-C" suffix to part number. Contact factory for pricing.

AIR FEED BUSHINGS

AT-TYPE ONE-PIECE ADAPTER TIPS

ADAPTER TIP

AT-series adapter tips are one-piece adapters primarily for fiberglass and plastic tooling. They are used with AT-series knurled liners, and are not compatible with any other liners or air-feed accessories. AT-series bushings are available in 3/4-16 and 1"-14 mounting-thread sizes, in a total of four OD sizes, to fit drill diameters from .1910" to .6250".

AT-TYPE ADAPTER TIPS

AT-4	.2810-.6250 K-5/8	3/4 .7500-.7498			1-14

LOCK LINER

Precision knurled liner bushing for mounting air-feed drills in fiberglass or plastic tooling. AT-series knurled lock liners are designed especially for AT-series one-piece adapter tips, and are not compatible with any other liners or air-feed accessories. Press-fit AT-series liners are available as specials. Available in four sizes.

TAPER-LOK AIR-FEED LOCKSCREWS

Angular locking surface mates perfectly with air-feed collars. Use instead of standard lock screws for greater strength . . . eliminates worn, bent, or broken lock screws caused by point contact. Serrations at bottom bite into the fixture plate to positively prevent rotation under heavy torque loads. Alloy steel mounting screws furnished. **Patent no. 3,336,822.**

AIR FEED BUSHINGS

TAPER-LOK LINERS

PRESS FIT

Precision liner bushing for mounting air-feed drills through a jig plate. One-piece design has two angled locking surfaces to lock the drill motor in place, for superior strength. Milled flats allow close hole spacing. Press fit into jig plate, then fasten from behind with a Lock Nut (order separately). Optional heavy-duty type has precisely machined helical locking surfaces that mate exactly with the air-feed collar for added impact resistance. **Patent no. 3,015,242.** Available for 21000 through 24000 series air-feed drills (not 25000 series).

KNURLED

Precision knurled liner bushing for mounting air-feed drills in fiberglass or plastic tooling. One-piece design has two angled locking surfaces to lock the drill motor in place, for superior strength. Optional heavy-duty type has precisely machined helical locking surfaces that mate exactly with the air-feed collar for added impact resistance. Milled flats allow close hole spacing. Available for 21000 and 22000 series air-feed drills. **Patent no. 3,015,242.**

REDUCERS

These Reducers allow mounting a smaller-series air-feed adaptor tip on a larger-series drill motor. Available for either standard or coolant-type air-feed drills. Available for 22000 through 25000 series air-feed drill motors. Two Reducers can be used together to step down several sizes.

Power Workholding For CNC Machining

Power Workholding
Precision Vises
Zero Point Mounting
Assembly and Handling

CARR LANE ROEMHELD MFG. CO.

In 1982 an independent joint venture was established to marry the proven product expertise of Roemheld with the tooling industry know-how and distribution network of Carr Lane Manufacturing. This partnership now offers to the American manufacturer the finest in international power workholding, combined with the best in local service and support.

Carr Lane Roemheld supplies North America with engineered hydraulic clamping and quick tool change systems, backed by responsive service and technical support. Used in the automotive, aerospace, appliance and other markets, these high-quality machine tool

accessories and workholders greatly increase manufacturing productivity.

Founded in 1952 in St. Louis, Missouri by Earl E. Walker and family to make standardized tooling components, Carr Lane Manufacturing has grown, through constant innovation, to become the foremost manufacturer and supplier to the American machine tool

industry. Now the most complete line available, Carr Lane Manufacturing offers jig and fixture components, toggle clamps, hoist rings, alignment pins, drill bushings, spring plungers, and modular fixturing. Setting the standard for American tool engineers, Carr Lane Manufacturing's catalog is recognized as the manufacturing engineer's tooling reference.

Drawing upon a centuries-old tradition of German craftsmanship, metalworking was already well established in Laubach, Germany when the Roemheld family began to manage operations in 1870. Development of the hydraulic workholding components

began in the early 1960's and soon grew to dominate the European market. Today, Roemheld GmbH is by far the world leader in this productivity-enhancing technology, offering a tremendous range of power workholding components of superior design and the highest quality.

We invite you to review this section of the catalog in depth and to visit roemheld-usa.com for more information. We at Carr Lane Roemheld welcome the opportunity to assist you in your manufacturing process in the most productive way possible — with the world's most dependable power workholding equipment.

CARR LANE ROEMHELD GUARANTEE OF QUALITY

Carr Lane Roemheld components are carefully designed, manufactured, inspected, and individually tested prior to shipment. In the unlikely case you find a defect in materials or workmanship within 12 months after receipt, we will promptly repair or replace the component, in accordance with our Limited Warranty below. Our liability is limited to replacement of the part and this warranty does not apply to altered or misapplied products.

Limited Warranty

Seller warrants that the product described herein will be free from defects in material and workmanship. If any failure to conform to this warranty be found within twelve (12) months, from date of receipt of the product by Buyer, and Seller is given immediate notification thereof, Seller, upon being satisfied of the existence of such nonconformity, will correct the same by replacement of the defective product or making suitable repairs. If the Seller is unable to correct such nonconformity by replacement of the product or making suitable repairs, whether due to the nature of such nonconformity, the use made by the Buyer of the product, or for any other reason, it will return to Buyer the price set forth herein, or where appropriate, the unit price for such number or quantity of products as shall have such nonconformity which Seller is unable to correct, upon Seller's receipt of the nonconforming product f.o.b. its plant; provided, however, no product shall be returned to Seller without its express written consent; and provided further that such receipt of any nonconforming product will not be required where it is no longer possible for Buyer to return the same to Seller. In no event shall Seller be liable to Buyer, either directly or by way of contribution or indemnity, for direct, special, incidental or consequential damages such as, but not limited to, property damage, loss of profit, damages based on loss of use of the product, or damages for cover, whether the claim for any such damages be based on warranty, express or implied, contract, tort, or otherwise. THE FOREGOING IS SELLER'S SOLE WARRANTY WITH RESPECT TO THE PRODUCT. SELLER MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

PRECISION MACHINE VISES INCREASE PRODUCTIVITY

Use in Conjunction with the Zero Point Mounting System for Faster, More Accurate Fixture Set Ups

REDUCE SET-UP AND DOWNTIME!

Zero Point Mounting System for Quick Change Fixturing

This comprehensive system utilizes clamping components and insertion nipples, which provide an immediate zero point orientation.

- Reduce set up time by as much as 90% with zero point mounting
- Existing fixtures can be easily adapted
- Highly accurate positioning and repeatability
- Increased productivity
- Fast payback
- Set-up times slashed
- Fixture life extended

What makes Roemheld Power Workholding better than earlier hydraulic clamps?

1 Designs specifically and purely for workholding

Earlier power clamping products descended from industrial jacks, pipe benders, and rams. Although these early devices (many still on the market) are fine for their original uses, they do not meet the special demands of modern workholding. For example, in a machining application, components are often subject to side loading due to cutting forces, not simply axial loads. This condition requires totally different engineering to provide sufficient bearing lengths for durability. As another example, workholding components are frequently exposed to coolant, chips, dirt, and grit, so clamps must include effective wipers and vent filters. Also, industrial cylinders converted to clamps are usually too bulky to fit easily on fixtures.

2 Compactness, with 7250-psi operating pressure

Earlier power clamps could operate at only 2000 to 3500 psi (pounds per square inch) fluid pressure. You needed large, bulky clamps with large internal cylinders to provide enough clamping force. Roemheld components are designed differently, inside and out, to fit easily on fixtures. They work comfortably even at 7250 psi, letting you use much smaller clamps to get the same clamping force. Compact Roemheld clamps open up new fixturing possibilities: you can now place clamps in tighter spots than before, and with the extra space, you can put more workpieces on a fixture (for example, six parts per cycle instead of only 4).

3 Zero-leakage sealing technology

Another feature unique to Roemheld power workholding is leak-free hydraulic sealing. Zero leakage is always important for safe clamping, and is absolutely vital on portable palletized fixtures. Maintaining pressure in a closed, disconnected system requires that *all* components – clamps, valves, and fittings – be leak-free. This calls for drastic changes in sealing techniques: cylinder seals are different, poppet valves (not leaky spool valves) are used whenever possible, and all fittings use metal-to-metal sealing (straight BSPP pipe threads with knife-edge sealing, instead of leak-prone tapered pipe threads).

4 State-of-the-art product development

The Edge Clamps and Extending Clamps shown above are just two examples of advanced clamp designs in the Roemheld line. Both set new standards for good engineering and compact size. Our many new products and product improvements result from constant, extensive research and development. New products are field tested and proven, often for years, before they are ever offered for sale.

5 Extensive clamp sizes that follow a logical progression

Roemheld offers a vast selection of clamp sizes and varieties, to match your requirements exactly. In fact, we offer *several times* as many catalog models as our closest competitor (with much better stock too)! Just as important, our clamp sizes follow a logical progression of clamping forces, so you can usually find a clamp that is just the right size.

6 Manifold mounting

Our Roemheld line pioneered the ever-increasing use of manifold mounting: supplying fluid to clamps through passages drilled in the fixture, rather than through tubing or hoses. Manifold mounting, which requires specially designed clamps, allows designing totally "clean" fixtures without chip traps. Also, manifold mounting lets you put clamps closer together and in tighter spots, often letting you put more workpieces on a fixture.

Carr Lane Roemheld Mfg. Co.

Sales — Phone (314) 647-6200 Fax (314) 647-5736

Engineering — Phone 1-800-827-2526 Web roemheld-usa.com

7 Work Supports

One of the most important improvements in power workholding is the work support. These components do not exert clamping force; instead, they lock off to restrain a workpiece during machining to prevent deflection and vibration. Roemheld work supports offer two major improvements: (1) drastically improved accuracy, with +/- .0002 inches repeatability, and (2) fluid-advanced and air-advanced supports. Fluid- and air-advanced versions offer significant advantages over conventional spring-loaded work supports. A spring-loaded support relies on a workpiece's weight to depress its support plunger to the proper height. While fluid pressure is off, the plunger remains in a raised position on the machine and can hamper loading and unloading. A fluid-advanced work support's plunger, on the other hand, is retracted when fluid pressure is off. Applying pressure first raises the plunger gently to the workpiece, then automatically locks it at the correct height. When pressure is released, the plunger retracts again for clear loading.

8 Swing Clamps

In all modesty, Roemheld Swing Clamps are by far the finest available anywhere, both in features and durability. Our proprietary safety-clutch mechanism prevents damage if the clamping arm strikes an unexpected object, such as an incorrectly loaded workpiece. The arm clutch disengages to avoid damaging the object or the clamp's helical-cam mechanism. In addition, our swing clamps incorporate a fast, totally dependable spring return, unlike our competitors'. We offer many varieties and sizes of swing clamps, including super-miniature and manifold-mounted versions.

9 Power Units for Workholding

Early power-clamping systems relied either on limited-capacity air/oil intensifiers or on massive, noisy pumps for hydraulic power. Roemheld Electric and Air Power Units are totally different: they are compact, quiet power units designed especially for workholding. These turnkey units include an extremely durable pump, large fluid reservoir, clamping valves, switches, gauges, and numerous safety devices. Workholding power units are becoming a standard accessory on milling machines and machining centers.

10 Pallet Coupling Systems

Power clamping on portable palletized fixtures is becoming quite common, yet presents some special challenges, such as maintaining full clamping pressure while the fixture is separated from its power source. We offer a wide choice of solutions, from rotary couplings, to manual pallet decouplers, to automatic coupling systems with programmable controllers.

11 Specials

Because many tough clamping problems require modified or totally special components, we offer full specials-engineering capabilities. Our research and development staff can quickly design products to meet your special requirements. And unlike our competitors, we are a full-capability manufacturer, from start to finish, so lead times are always reasonable.

12 Engineering and Service Support

Drawing Files Available at
www.carrlane.com

The combined resources of Carr Lane Roemheld Mfg. Co., Carr Lane Mfg. Co, and Roemheld GmbH bring you the world's finest technical support. Our capabilities include:

- (1) Field engineers and regional managers helping our fine authorized distributors give you on-site assistance nationwide.
- (2) Extensive CAD/CAM capabilities, both inhouse and for customer use, including a complete CAD library of catalog items available for users.
- (3) A large stock of catalog items, plus quick-response manufacturing capabilities.
- (4) Quality products that rarely need service, unlike those of our competitors, who regularly sell replacement parts and need repair stations throughout the country.

Design Information

1. Operating Pressure

Although most Roemheld components operate comfortably and safely at up to 7250 psi, we recommend selecting a standard "design pressure" of 6000-psi for workholding fixtures. The table on each clamp's catalog page shows 6000-psi forces in bold for quick reference.

Designing at 6000 psi gives you most of the compactness benefits of high pressures, yet leaves a 25% reserve in case you find that you need additional holding force after building the fixture. Adjust up or down if necessary after checking the fixture. We recommend permanently labeling or stamping the fixture with the chosen operating pressure, for future reference. Operating at low pressures is somewhat a waste of our components' capabilities, but may occasionally be desirable with delicate workpieces. Whenever possible, stay with high pressures and use smaller clamps for better economy and minimum size. Minimum operating pressure is generally 1500 psi using an Electric Power Unit, or 2200 psi using an Air Power Unit. Work supports require at least 1500 psi. Please note, a few products in this catalog are limited to pressures lower than 7250 psi. To use these components in full-pressure systems, see Pressure Reducing Valves.

2. Machining Operations and Fixture Layout

While developing your fixture concept, consider the following factors wherever possible:

Use positive stops to resist machining forces, rather than relying just on clamp forces. With well-placed locators, you can use smaller clamps.

Choose clamping points that are backed up by solid stops or rests to resist clamping forces. Clamping forces can distort a workpiece unless counteracted by firm supports.

Evaluate workpiece-loading procedure and clamping sequence. Loading and clamping can be completely automatic, or involve some manual steps. To position the workpiece against locators, spring-loaded positioners (above) are often helpful. Sequence Valves are extremely useful to position hydraulically with push clamps before clamping. Total positioning force should be 30-50% of the workpiece's weight to overcome friction.

Decide how many parts you want to place on the fixture. For example, to place three workpieces on the above fixture, super-miniature Swing Clamps are necessary. With only one workpiece, just about any clamp would do.

3. Plumbing Options

Supplying fluid to hydraulic fixtures is not merely an afterthought. Fluid supply is an integral part of fixture design. The following Swing Clamp fixtures illustrate four distinct plumbing concepts.

1. Tubing lines on top of fixture plate. This is the oldest, most traditional method of supplying fluid to hydraulic clamps. Before manifold mounting, using tubing was about the only option available. Advantages; less baseplate machining is required; quick build time. Disadvantages: chips are easily trapped in tubing lines; a large base-plate area is required; exposed tubing is subject to damage.

2. Tubing lines underneath fixture plate. Running tubing lines below the working area is an improvement on option 1. Advantages: no chip traps in working area; more freedom to position clamps with tubing out of the way. Disadvantages: a large base-plate area is still required; more complicated fixture construction.

3. Manifold mounting, with O-ring ports. This option uses passages drilled in the fixture to feed fluid directly to O-ring ports underneath the clamps. Advantages: more compact fixture size; no chip traps in working area; most economical construction. Disadvantages; gundrilling is sometimes required; less freedom to mount clamps in odd positions.

4. Cartridge-type manifold mounting. Similar to option 3, except clamps are embedded in specially prepared, tapped mounting holes. Advantages: most compact fixture size; great freedom to position clamps in tight places; no chip traps in working area. Disadvantages: gundrilling is sometimes required; a thicker base plate is usually required (this is also an advantage because it makes the fixture more rigid).

4. Cutting Forces

An important step in most fixture designs is looking at the planned machining operations to estimate cutting forces on the workpiece, both magnitude and direction. Your "estimate" can be a rough guess based on experience, or a calculation based on machining data. One simple formula for force magnitude is based on the physical relationship:

$$Force = \frac{Power}{Velocity}$$

$$F = \frac{P}{V}$$

Cutting force (lbs)	Heaviest-cut horsepower × Machine efficiency × 33,000	
	Cutting speed (sfpm)	

Please note: heaviest-cut horsepower is not total machine horsepower, rather it is the maximum horsepower actually used during the machining cycle. Typical machine efficiency is roughly 75%. (.75). The number 33,000 is a units-conversion factor.

The above formula only calculates force magnitude, not direction. Cutting force can have X, Y, and/or Z components. Force direction (and magnitude) can vary drastically from the beginning, to the middle, to end of the cut.

Sales — Phone (314) 647-6200 Fax (314) 647-5736
Engineering — Phone 1-800-827-2526 Web roemheld-usa.com

Design Information

Example

Intuitively, force direction is virtually all horizontal. In this example (negligible z-axis component). Direction varies between the x and y axes as the cut progresses.

5. Clamp Forces / Sizes

Clamping-force calculations can be quite complicated. Sometimes an approximate method is good enough. See table below for how much clamping force is available from manual clamp straps of various sizes (with a 2-to-1 clamping-force ratio) to compare with power-clamp forces.

Stud Size	Recommended Torque* (ft-lbs)	Clamping Force (lbs)
1/4-20	4	500
5/16-18	9	900
3/8-16	16	1300
1/2-13	38	2300
5/8-11	77	3700
3/4-10	138	5500

* Clean, dry clamping stud torqued to approximately 33% of its 100,000 psi yield strength (2:1 lever ratio).

You can also calculate required clamping forces based on calculated cutting force. A simplified example appears below, with cutting force entirely horizontal, and no workpiece stops

$$\text{Clamping force (lbs)} = \frac{\text{Cutting force (lbs)}}{\text{Static friction coefficient}} \times \text{Safety factor (usually 2)}$$

Contact surfaces	Friction coefficient (Dry)	Friction coefficient (Lubricated)
Steel on steel	.15	.12
Steel on cast iron	.19	.10
Cast iron on cast iron	.30	.19

(frictional force resists the entire cutting force). With workpiece stops and multi-direction forces, calculations become much more complicated. To simplify somewhat, determine the worst-case force situation intuitively, then treat the calculation as a two-dimensional static-mechanics problem (using a free-body diagram). In the example below, cutting force is already known to be 1800 lbs from previous calculations. The workpiece weighs 1500 lbs. Unknown forces are:

- F_R = Total force from all clamps on right side
- F_L = Total force from all clamps on left side
- R_1 = Horizontal reaction force from fixed stop
- R_2 = Vertical reaction force from fixed stop
- R_3 = Vertical reaction force on right side
- N = Normal force = $F_L + F_R + 1500$
- μ = Coefficient of friction = .19

The equations below solve for unknown forces assuming that for a static condition:

- The sum of forces in the x direction must equal zero
- The sum of forces in the y direction must equal zero
- The sum of moments about any point must equal zero

At first glance, the example above looks "statically indeterminate," i.e. there are 5 variables and only 3 equations. But for the minimum required clamping force, R_3 would be zero (workpiece barely touching) and F_L would be zero (there is no tendency to lift on the left side). Now with only 3 variables, we can solve:

$$\begin{aligned} \sum F_x &= 0 \\ \sum F_y &= 0 \\ \sum M &= 0 \end{aligned}$$

$$\begin{aligned} &= -1800 + R_1 + (.19)(1500 + F_R) \\ &= R_2 - 1500 - F_R \\ &= (34)(1800) - (15)(1500) - (30)(F_R) \end{aligned}$$

Solving for the variables,

$$\begin{aligned} F_R &= 1290 \text{ lbs} \\ R_1 &= 1270 \text{ lbs} \\ R_2 &= 2790 \text{ lbs} \end{aligned}$$

In other words, the combined force from all clamps on the right side must be greater than 1290 lbs. We recommend a 2-to-1 safety factor (2580 lbs). Even though F_L (the combined force from all clamps on the left side) equals zero, a small clamping force may be desirable to prevent vibration. Too much clamping force

can be as bad as too little. Excess force can cause fixture and machine-table distortion or even damage. Even a small hydraulic clamp can generate tremendous stresses (S). In the

$$S = P \times \left(1 - \frac{1}{1 + \frac{FL^2}{2EI}} \right)$$

example above, three 4560-lb Edge Clamps cause some machine-table bending. Using static beam-binding calculations, maximum distortion, at point D, is about .0006 inches (probably acceptable). However, if the clamping point were higher off the machine table (P dimension), distortion would be much greater. Higher clamps would require adding an intermediate fixture plate to increase table rigidity.

6. Work Supporting

Unlike clamps, work supports do not actually exert force on a workpiece. After adjusting to the part, work supports essentially become fixed supports or rests. A work support's load capacity increases proportionally as fluid pressure rises:

Design Information

Choose enough load capacity to resist: (1) machining forces; (2) workpiece weight; (3) clamping forces not resisted by fixed stops.

When supporting underneath a clamp, as in the example above, load capacity should be substantially greater than clamping force. Not only must the support resist static clamping force, it must resist dynamic load too (the "hammering" due to clamping-arm momentum). We recommend a load capacity of at least 2 times the clamping force. Another factor when clamping over a work support is that the clamp may build up force faster than the support builds up load capacity. To avoid this, use a sequence valve to delay clamping until load capacity builds up.

7. Single Acting vs. Double Acting

The return side of single acting elements, with a few exceptions (small work supports), require breather ports on the return side, and when used in systems with high flow or pressurized cutting fluids/coolants, great care must be taken to ensure that these fluids do not enter the return side of the clamps. It is highly recommended that double acting elements be used in such systems, thus eliminating the problem, and resultant machine down time. Double acting clamps should also be used in systems having an automatic load/unload, so that all functions can easily be coordinated.

1. Moving linkages or retracting heavy loads. For a quick, positive return when weight is too heavy for spring return.

2. Large fixtures with long tubing runs or flow restrictions. Return speed is adversely affected by: (1) pressure drop in tubing and hoses; (2) pressure drop in valves; (3) high fluid viscosity, especially at lower temperatures; (4) frictional force at piston seals, especially when clamped for an extended time, which displaces the fluid film on cylinder walls.

3. Machine-tool interlock. In automated systems where timing and synchronization are important, double-acting clamps are the best choice. By installing pressure switches in both clamping and return lines, a machine controller knows exact clamp status at all times.

8. Clamping Time

Hydraulic clamping is usually fast, but not instantaneous. To estimate clamping time, consider the two phases of clamping:

1. Extending time, under low-pressure free flow
2. Pressure-building time

Extending time is fairly easy to calculate, knowing fluid required by each clamp and the power units flow rate, using the formula below. One obvious way to reduce clamping time is to set clamps as close to the workpiece as possible, to use as little stroke as possible.

$$\text{Extend time (sec)} = \frac{\text{Maximum fluid req'd for all clamps (cu.in.)} \times \text{Portion of stroke used (usually 1/2)}}{\text{Power Unit flow rate (cu. in./min.)}}$$

After extending, an additional volume of fluid must be pumped into the system to build pressure. This is due mainly to:

1. Compressibility of the hydraulic fluid (add about 4% of total system volume to build to 7250 psi)
2. Volume expansion of hydraulic hoses (.066 cu.in. per foot)
3. Charging an accumulator, if used

By calculating fluid required for each of the above factors, you can estimate pressure-building time. Using Sequence Valves lengthens clamping time, because each sequence step requires extending time and pressure-building time. To reduce clamping time, set Sequence-Valve trigger pressure as low as possible. With multiple Sequence Valves, set trigger-pressure differences at their minimum allowables value.

9. Other Hydraulic Considerations

The basis of hydraulic clamping systems is "Pascal's Law", which says that if pressure is applied to a static fluid that is completely enclosed, that pressure is transmitted equally in all directions: This principle is used to transmit force to remote locations,

via hose, tubing, or drilled passages. When hydraulic pressure acts on a clamp's piston area, it generates external force according to the physical relationship $F=P \times A$:

Clamping with hydraulics causes some strange effects not occurring with manual clamps. One such phenomenon is fluid shifting between equal-force opposing clamps.

In the example above, the two opposed clamps allow the workpiece to float between them. Pushing on one clamp encounters no resistance because fluid just shifts to the opposing clamp (if the check valves were not present). Do not let equal-force clamps oppose each other without Remote-Controlled Check Valves.

Another strange effect is pressure change due to temperature change of a closed system. In fact, pressure changes about 80 psi per 1° F! Be careful of excessive temperature changes, especially increases. Use a Pressure-Relief Valve for safety.

10. Hydraulic Symbols and Circuit Diagrams

Hydraulic symbols and diagrams are a useful "shorthand" method of describing how a clamping circuit works without detailed drawings. The following pages show two circuit examples, and a summary listing of hydraulic symbols.

Design Information

Bleeding of the Spring Area ■ A0.110

Introduction

Due to increased use of coolants and cutting fluids in machining, there is an increased possibility that these fluids may penetrate into the spring areas of single acting cylinders and work supports. Many fluids can cause corrosion, which can lead to malfunction and possible failure.

Why bleeding is necessary

If not vented, excess pressure or vacuum in the spring area changes the spring forces which may lead to malfunctions.

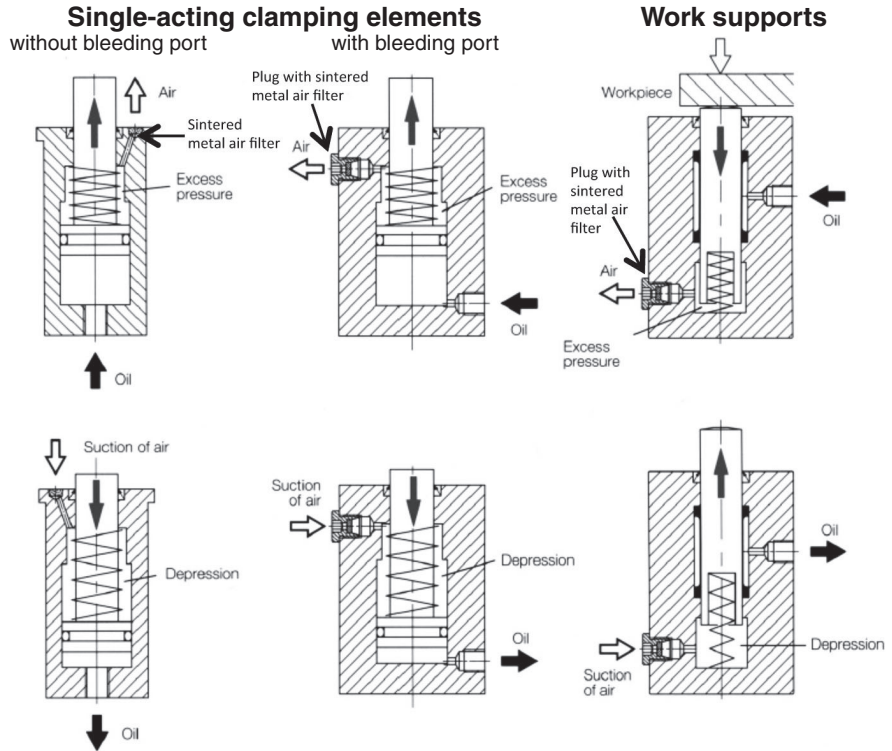

Condensation from coolants can lead to corrosion on the piston, spring or housing.

Leakage of hydraulic seals must drain properly to avoid malfunctions.

Using sintered metal filters minimizes dust and chips.

Liquids are the real problem because they can be drawn through the air filter. This can cause the spring area to be reduced. Malfunctions can occur due to this excess pressure or vacuum.

Catalog elements with bleeding of the spring area

• Venting of Spring Air ■ A0.110

Cover

Clamping elements without bleeding port can be covered, but due to today's normal quantities of coolants this does not seem to be successful. In such applications you should use other clamping elements, preferably double-acting elements.

Bleeding hose

Connection of a bleeding hose is preferred and the opening is to be displaced to a point where no liquid can penetrate.

Closed bleeding system

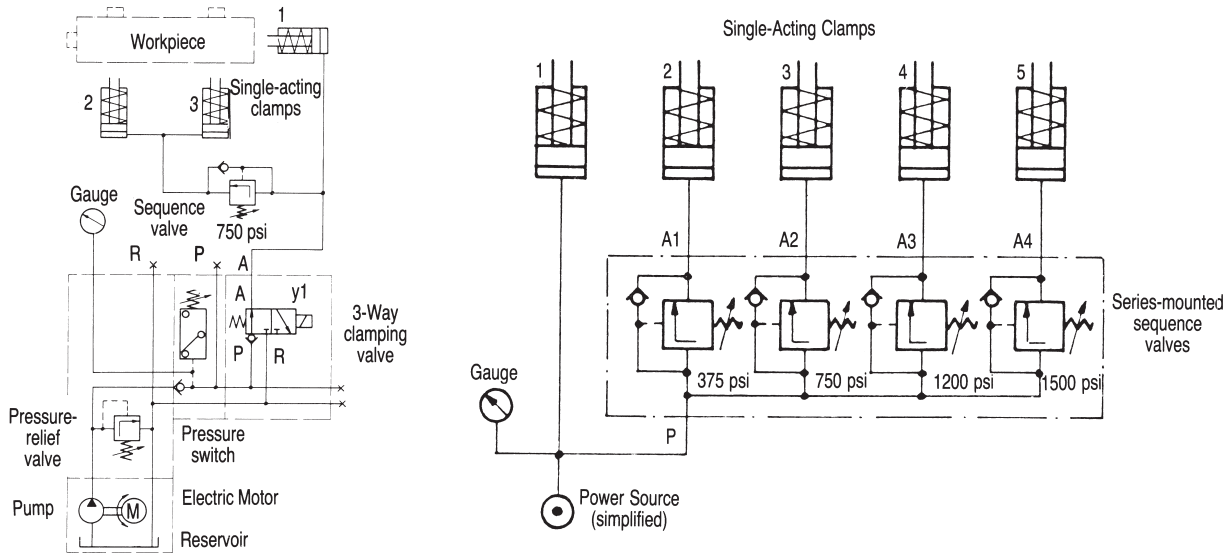

Connecting the breather port to an external area can increase the spring area volume. By doing this, the amount of additional pressure or vacuum generated is minimal. This serves a dual purpose in allowing the spring area to be vented as well as protection from aggressive coolants. A good solution is to use sealed electrical wiring boxes with connecting threads. **The volume of this additional area should be ten times the stroke volume of all connected elements.**

Subject to change. For further details, including detailed dimensions and mounting instructions, visit roemheld-usa.com.

Design Information

Example Hydraulic Circuit Diagrams

Clamp & Cylinder Symbols		Valve Symbols	
	Push clamp or cylinder, single acting		3/2 directional-control valve (3-way, 2-position), complete symbol with solenoid operator and spring return (normally open)
	Push clamp or cylinder, double acting		Boxes showing valve positions (two). For valves with spring return, the neutral position is shown at left (0).
	Pull clamp, single acting		Inlet and outlet connections are drawn at the neutral-position box, and are designed by capital letters: P = Inlet pressure from pump A, B, C... = Operating connections R, S, T = Outlet return (tank) L = Leakage line Z, Y, Z = Control Lines

Design Information

	Flow lines and directions are shown in each valve-position box. Lines show flow path, arrows show flow direction. Shutoffs are designated by capped-off lines inside the box.		Check valve
			Remote-controlled check valve (pilot operated)
			Shutoff valve
			Pressure-relief valve
			Flow control valve, with unrestricted return line
	Valve operators are shown outside the boxes	Accessory Symbols	
	Solenoid operated		Operating line, pressure or return
	Spring operated (or returned)		Control line, for transmitting control/pilot signals
	Manually operated		Leakage line, for carrying away fluid leakage
	Detent position		Flexible line, such as hydraulic hose
	Lever operated		Line connection
	Foot-pedal operated		Line crossing, without connection
	Push-button operated		Pressure-connection point, such as a port
	Cam-roller operated		Bleeding point
	Plunger operated		Quick disconnect, coupled
	Air-pilot operated		Quick disconnect, decoupled
	2/2 directional-control valve, normally closed on top, normally open below.		Rotary coupling (2 passage shown)
	4/2 directional-control valve, for double-acting clamps		Accumulator
	Sequence valve, with unrestricted return line		Gage
	Pressure-reducing valve, with unrestricted return line		Pressure switch
			Air filter/regulator/lubricator

Recommended Precautions For The Designer, Builder & Operator

IMPORTANT: READ THIS SHEET CAREFULLY BEFORE OPERATING.

Roemheld power workholding components are high quality products, engineered and manufactured to give you long, dependable and safe performance. For proper and safe operation, please follow all instructions on this sheet. Save these instructions for future reference.

SERVICE NOTE: Most Roemheld components are 100% individually tested for proper operation before leaving the factory. Please recheck these instructions if your new unit does not work properly. Should any component ever need service, please contact the factory. Do not disassemble the unit yourself — many are not user serviceable. Roemheld components incorporate advanced sealing technologies that eliminate the need for routine seal replacement.

TUBING: Use only *steel* tubing as specified in the Roemheld catalog: Seamless steel tubing, C1010, cold drawn, fully annealed, 5/16 OD, .065 wall thickness (Certified to 37,500 psi burst). Follow all tubing installation guidelines. We highly recommend the CLR-300-TL flaring tool to effectively flare this heavy-walled tubing.

HOSES: Use only hydraulic hoses as specified in the Roemheld catalog: 1/4 ID hydraulic hose, 25,520 psi min. burst pressure, (2) female swivel-nut ends, 5/16 JIC 37° flare.

FLUID CONNECTIONS: Connect fluid lines to the 5/16 JIC 37° flare male connection on each clamp (two for double-acting clamps). This fitting accepts either 5/16 OD 37° flared tubing, or a hydraulic hose with 5/16 JIC 37° swivel nuts (female) at each end. **Do not screw NPT pipe fittings into Roemheld components, or use NPT fittings anywhere in a workholding system.** Roemheld fittings are 5/16 JIC 37°. These fittings offer a positive metal-to-metal seal. **Do not use teflon tape or sealant.** Do not use fitting sizes other than 5/16. This size is ideal for workholding fixtures. Smaller tube sizes have poor flow rates. Larger tube sizes are not readily available with sufficient wall thickness for high pressure operation, and are difficult to flare. Never use brass fittings.

OPERATING PRESSURE: Do not operate components above their maximum allowable fluid pressure stated in the Roemheld catalog (7250 psi for most components). Always use a gauge to monitor fluid pressure. Locate pressure gauge where the machine operator can easily read it. Often, placing it directly on the machining fixture is best. All Roemheld Electric and Air Power units include a fluid-pressure gauge.

ADDITIONAL SAFETY PRECAUTIONS: If losing fluid pressure (due to a cut hose, etc.) would pose any danger to the operator, install a pressure switch, or other pressure-monitoring device, to monitor system pressure. This switch electrically signals the machine tool to shut down if fluid pressure is inadequate.

COMPONENT COMPATIBILITY: Do not mix non-Roemheld components into a Roemheld power-workholding circuit. Other brands are not leakfree, and their performance may be unpredictable.

HYDRAULIC FLUID: Always use absolutely clean, fresh hydraulic fluid. Fill the fluid under absolutely clean conditions. **Almost all service problems are caused by dirty, contaminated fluid. Fluid must be clean to 10 micron or better nominal filtration.** Use only the following DIN 51524, HLP, ISO Grade fluids to preserve your warranty:

Oil Temp. [°C]	Designation [as per DIN 51524]	Application
10-40	HLP 22	Power units with poppet valves or single acting circuits
15-50	HLP 32	Mechanical pumps or double acting circuits

See also CLR-000-V, high pressure in-line filter.

BLEEDING AIR: Usually components will bleed trapped air automatically when you clamp and unclamp them several times. If manual bleeding is still necessary, bleed at an elevated tube or hose connection, farthest from the power source. With the clamps actuated (system pressurized) slightly loosen the connection. After fluid seeps out for a few seconds, retighten. Repeat at other connections if necessary. After bleeding, unclamp (depressurize system) and refill the power sources fluid reservoir.

CAUTION: ALWAYS KEEP HANDS CLEAR OF POWER CLAMPS DURING OPERATION. THESE COMPONENTS EXERT VERY HIGH FORCES AND CAN CAUSE SERIOUS INJURY. DISCONNECT POWER SOURCE BEFORE CONNECTING, DISCONNECTING, ADJUSTING, OR OTHERWISE HANDLING COMPONENTS.

FLOW CONTROL: When using Swing Clamps, Extending Clamps, or Fluid-Advanced Work Supports with a high-flow-rate power source, make sure the fluid flow rate to each component is under the maximum stated in the catalog. Otherwise the components may not activate properly. See the Roemheld catalog for flow control valves.

FLOOD COOLANT: Work Supports and Swing Clamps have air vents protected by sintered-metal filters. These vents could draw in coolant if the components are submerged. To prevent this, attach an air vent tube via the tapped hole provided (see each component's catalog page for air-vent-fitting part numbers).

PRESS-TOOL CLAMPING: Clamping die sets on presses require different components and safety devices than found in our Roemheld Power Workholding catalog. Contact factory for press-tool clamping systems.

MOUNTING: Carefully follow mounting instructions as shown in the Roemheld catalog for each component.

Low Pressure Clamps ■ Work Supports

Advantages

- Low pressure high clamping force.
- Can be ran off machine hydraulic, so an additional power unit is unnecessary.
- Improved production rate and quality over manual clamping.
- See website or contact engineering for more information.

B1.8233 Block Clamps 70 / 100 bar

Hydraulic block clamps are particularly suitable for clamping of workpieces, that require a large free space for machining, and for applications where conventional clamps and swing clamps are too big. Clamping direction adjustable and in small recesses and bores. Clamping force of 540-2920 lbf.

B1.8268 Hinge Clamps with Throttle Valve 70 bar

Hydraulic Hinge Clamps are designed for the direct connection to the lowpressure hydraulics of machine tools. Special kinematics allow clamping without side loads of workpieces which are very sensitive against deformation. Clamping force of 515-3865 lbf.

B1.8271 Mini Compact Clamp 200 bar

Mini compact clamps are designed for application in hydraulic clamping fixtures where oil supply is effected through drilled channels in the fixture body. Clamping force of 20-290 lbf.

B1.848 Mini Swing Clamps with Sturdy Swing Mechanism 150 bar

This double-acting mini swing clamp works as pull-type cylinder where a part of the total stroke is used to swing the piston. Mini swing clamps are particularly suitable for machining of thin-walled workpieces, which require only little clamping forces. Clamping force of 20-135 lbf.

B1.8500 Swing Clamps with Sturdy Swing Mechanism 70 bar

The hydraulic swing clamp with sturdy swing mechanism can be directly connected to the low-pressure hydraulics of the machine tool. Clamping force of 135-2990 lbf.

B1.8802 Swing Clamps with Reinforced Swing Mechanism 160 bar

The Swing Clamps with Reinforced Swing Mechanisms are designed with a double clamping arm which gives the ability to clamp 2 work pieces at the same time. Forked head for simple clamping arms. Clamping force of 315-785 lbf.

B1.947 Threaded-Body Work Supports 70 bar

Hydraulic work supports are used to provide a self-adjusting rest for the workpiece during the machining operations. They compensate the workpiece surface irregularities, also vibration and deflection under machining loads. Support force up to 900 lbf.

B1.9472 Threaded-Body Work Supports 70 bar

This series of Threaded-Body Work Supports can be directly connected to the low-pressure hydraulics of the machine tool. The extension, a shaft diameter of 16 mm, enables the support of surfaces in recesses and cavities that otherwise would be inaccessible. Support force up to 675 lbf.

Down-Holding Clamps

Flat Profile
pages 605-606

Compact Clamps
page 608

Hinge/Link Clamps
pages 609-611

Extending Clamps

Arm extends forward to clamp, then retracts again for clear loading when unclamped. Ideal for clamping in narrow recesses.

Flat Profile Clamps extend in a smooth, continuous radial motion. The arm retracts fully for loading. Choice of swivel-pad arm or spherical-nose arm. **Compact** Clamps have a sturdy lever mechanism that pivots into clamping position. These clamps are extremely compact both in footprint and overall height. The clamping lever pivots a full 90° for clear loading even when using custom long clamping levers. Ideal for clamping in narrow recesses.

Compact Clamps have a metallic wiper edge, and are especially suited for applications where space is limited. Two different clamping levers are available, which can be machined to adapt to your workpiece, then swiveled into small recesses for unimpeded loading and unloading. Four different sizes of the clamp are available, each with a short or long clamping arm.

Hinge or Link Clamps are ideal in narrow recesses, and have a fully retractable arm for clear loading from above. Hinge clamps are ideal for manifold mounting, and are available in more than 100 variations.

Low Profile
page 607

Edge Clamps

Nose advances to grip side of workpiece. Clamping thrust is both forward and down. Ideal when clamping from above would interfere with machining.

Low profile edge clamp sits below cutter path yet still clamps high on workpiece...important for solid, vibration-free clamping.

Down-Holding Clamps

Air-Powered Swing Clamps

Ideal when only light clamping force is required. Powered by low-pressure shop air.

pages 613-614

Swing Clamps

Arm swings 90 degrees then clamps down. Ideal when you need maximum reach and clearance for loading/unloading. Proprietary safety-clutch mechanism prevents damage if the clamping arm strikes an unexpected object during its swing.

Flange base swing clamp is good for taller workpieces. Very popular because it takes up little area on the fixture. Mount either on top of fixture or through fixture plate.

All threaded swing clamp is well-suited for through-hole mounting. Fittings are underneath clamp to keep plumbing away from workpiece area.

Top Flange swing clamp has high-level fittings. Mounts in a tapped or bored hole, with plumbing running above the fixture plate or using manifold mounting.

Extending Clamps ■ Flat Clamp ■ B1.8231

Flat Clamp ■ with optional position monitoring ■ Double Acting
Max. Operating Pressure ■ 7250 psi (500 bar)

- Flat, compact design
- High protection against chips and spatter
- Large clamping stroke
- Clamping lever completely retracts
- Optional position monitoring
- Designed to resist side forces at the clamping point

The flat clamp is a double-acting hydraulic clamping element available in two sizes with two lever options. Oil can be supplied via fitting connection or manifold mounted. The clamping lever is connected to the piston by a connecting rod and retracts completely within the body of the clamp allowing for vertical part loading.

IMPORTANT NOTES: When mounted vertically, it is recommended to remove the cover plate to allow for coolant and chip drainage. Other notes can be found in A 0.100.

These extending clamps have an extremely low profile for excellent machining clearance.

Edge Clamps

7250 psi max
Single acting

Low Profile

- Grips side of workpiece . . . pushes forward and down
- Ideal when clamping from above is difficult
- Down-holding force is 1/3 of total clamping force
- Sits low yet clamps high . . . just below the cutter path to reduce vibration
- Choice of three sizes

Low-profile edge clamps can be used to grip the side of a workpiece for machining clearance, or to clamp over the top edge.

CLAMPING ACTION: Fluid pressure advances the cylinder, which in turn pivots the nose forward and down to grip side of workpiece. Spring return.

MOUNTING: Fasten with four socket-head cap screws. 1/4 BSPP connection. Same unit may be mounted without external plumbing lines. To manifold mount, order CLR-3000-347-SW O-ring and CLR-810-F port plug.

CONSTRUCTION: Internal cylinder pushes pivoting nose. Nose cover keeps out chips and debris. Body made from carbon steel, black oxide finish. Forged, alloy steel nose, hardened to RC 56-58. Nose is through-hardened so that it can be ground to suit the workpiece if desired.

Low-profile edge clamps can be mounted low, yet clamp up high, just below the cutter path to reduce vibration. Edge clamps can be manifold mounted on a flat surface by unplugging the bottom port and installing o-ring CLR-3000-347-SW, then plugging the 1/4 BSPP port plug.

Edge clamp used with a block-type work support, both components manifold mounted for easy chip removal.

Extending Clamps ■ Compact Clamp ■ B1.827

Compact Clamp ■ Cartridge type with pneumatic clamping monitoring
Double Acting ■ Max. Operating Pressure ■ 3625 psi (250 bar)

The compact clamp pivots over the workpiece, then clamps in a downward stroke without applying any side load to the part like similar clamps. When retracted, the arm is behind the front plane of the clamp allowing for unobstructed top loading. It has a small footprint with large clamping force. Metal wiper on piston rod and nitrated finish helps protect

this clamp from chips and coolant for a long life cycle. Four Sizes, three mounting options and two arm options help the designer choose the optimal clamp for their application. The long arm can be machined to fit into pockets. The clamp for closed bore mounting does not include the lower protective cap which makes the overall height shorter.

Extending Clamps ■ Hinge Clamp ■ B1.829

Hinge Clamp with Flat Clamping Lever ■ with pneumatic position monitoring* Single and Double Acting ■ Max. Operating Pressure ■ 3625 psi (250 bar)

The cartridge style compact hinge clamp with flat clamping lever is especially suitable for fixtures with minimal space. It allows for machining of surfaces that are only a few millimeters above the clamping point. When clamping, the piston moves upwards against the rear edge of the lever and pivots it to the clamped position. The piston force is diverted 180° onto the workpiece. The force is dependent on the operating pressure and length of lever.

When unclamping the lever is pivots back to the unclamp position by means of a hook-shaped carrier on the piston. Double acting is required for time and cycle dependent installations, since the return stroke is precisely defined. Typical applications for double acting are multiple clamping fixtures with many workpieces that are closely arranged, rotary indexing fixtures in horizontal and vertical machining centers, assembly lines. These clamps are intended to be used with hydraulic fluid only.

Hinge Clamps ■ R-Series ■ B1.8251

Hinge Clamp ■ with metal wiper and optional position monitoring
Double Acting ■ Max. Operating Pressure ■ 3625 psi (250 bar)

The hinge clamp family of workholding clamps offer many different variations in order to satisfy your fixturing goal. As the hydraulic piston moves upward, the hinge mechanism swivels the arm over your workpiece. The optimized design location of the pins and linkage can reduce or eliminate the transmission of side loading into your part. When retracted, the standard arm is behind the front plane of the clamp allowing for unobstructed top loading. It has a small footprint with large clamping force and FKM seals are standard. Metal wiper on piston rod and contoured top surface provides excellent protection from chips and coolant drainage for a long life cycle. Three sizes, three mounting options, and two arm options help the designer choose the optimal clamp for their application. The long arm can be machined to fit into pockets.

Other Manufacturers have uneven clamping forces

Roemheld gives you true vertical forces at the clamping point

Standard Body comes with your choice of oil connection; fitting connection (left) or connecting insert (right)

Intermediate Spacer Plates

Oil Connecting Insert

Subject to change. For further details, including detailed dimensions and mounting instructions, visit roemheld-usa.com.

Why Carr Lane Roemheld Swing Clamps?

Designed for 1,000,000 cycles

2,000,000+ cycles tested at full load

- Rod diameter 30% larger to eliminate part deflection
- Viton wiper is standard (metal wiper optional)
- Exclusive safety clutch design available to prevent damage to part, fixture, or operator
- Reinforced swivel mechanism with 2 or 3 helix paths depending on size for longer life
- Up to 7500 psi maximum pressure for more compact clamp design
- Position monitoring available, either inductive or pneumatic via movable sensing bolt
- Over 1000 different standard sizes and styles available with clamping forces from 130 lb. to 8265 lb. stroke up to 2"
- Special stroke and clamping forces available upon request.

See Page 628-638

Versatile Modular Units For Assembly and Handling

- Combine our modular units to Lift, Tilt, Rotate or Move your assembly
- Easily move your assembly to optimal position to increase productivity and reduce fatigue
- Preset positions for long runs or adjustable locations for flexibility

See Pages 734-735

Swing Clamps ■ Pneumatic ■ J7.201

Swing Clamps ■ All threaded and bottom flange type with pipe thread air connection
Double Acting ■ Max. Operating Pressure ■ 102 psi (7 bar)

The pneumatic swing clamp is a pull type cylinder where a part of the total stroke is used to swing the piston, for when it is essential to keep the clamping area free for unrestricted workpiece loading/unloading. Used in applications that require low clamping forces. Can be mounted in any position. The robust swing cam allows for maximum life. Five sizes, and two arm options help the designer

choose the optimal clamp for their application. The long arm can be machined to fit your application. Guide bushing, housing and flange are made of hardcoated aluminum and the piston rod is made of corrosion resistant steel.. Special swing angles are available. Electric position monitoring available and switching point can be adjusted to any point in the stroke range.

Swing Clamps

7250/3000 psi max
Single and double acting

CLAMPING ACTION: Fluid pressure swings arm 90° over workpiece then clamps down. Spring return lifts arm then swings in back 90° for loading/unloading. Optional fluid return version (double-acting). Choose either clockwise or counterclockwise rotation to clamping position.

MOUNTING: Choose from many possible mounting methods: (1) Fasten to top of fixture plate with four capscrews inserted through flange base from above; (2) Mount through a hole in the fixture plate, fastening with four capscrews inserted through flange base from below; (3) Mount through a bored hole and secure with two lockings. Mount in any position, horizontal or vertical. Standard clamping arm requires a rear support.

DESIGN CONSIDERATIONS: The clamping arm must go through its full swing to operate properly. Stopping the arm short by obstructing it could possibly cause damage. Use low operating pressure during initial setting. May require a simple flow-control valve if fixture contains only a few clamps and is powered by a high-flow-rate power source. See power source pages to check. Cycle time must be at least one second.

STANDARD CLAMPING ARM: Rugged nodular iron arm pivots on a forged steel carrier. Arm can be mounted to start its 90° swing from any position within 360°. Contact bolt furnished.

OPTIONAL HALF ARM: Forged steel, furnished with contact bolt. Whenever possible, use standard clamping arms, with rear supports, for best mechanical leverage and full clamping force. Half arms are more compact and useful when there is no room for a rear support, but the maximum clamping force is greatly reduced. Half arms cause bending in the piston rods. This bending lowers the allowable maximum fluid pressure to 3000 psi. Exceeding 3000 psi can cause internal damage and decrease service life considerably. Arm extensions will further reduce the allowable operating pressure (inversely proportional to arm length.) To order Swing Clamps with half arms instead of standard arms, add an "H" to the part no.

FLUID CONNECTION: Male 37° tubing/hose connection (two with double-acting clamps). Do not use NPT fittings.

CONSTRUCTION: Sturdy helical-cam mechanism first rotates arm, then clamps. Integral safety clutch. Unit sealed to keep out dirt and chips.

3000 psi maximum

Optional Half Arm

To order a Swing Clamp with a half arm instead of a standard pivoting arm, add on "H" to the part no. Example:

CLR-314-SC Standard Arm
CLR-314-SCH Half Arm

Swing Clamps

7250 psi max
Single and double acting

Top Flange

CLAMPING ACTION: Fluid pressure swings arm 90° over workpiece then clamps down. Spring return lifts arm then swings it back 90° for loading/unloading. Optional fluid return version (double-acting). Choose either clockwise or counterclockwise rotation to clamping position.

DESIGN CONSIDERATIONS: The clamping arm must go through its full swing to operate properly. Stopping the arm short by obstructing it could possibly cause damage. Use low operating pressure during initial setting. May require a simple flow-control valve if fixture contains only a few clamps and is powered by a high-flow-rate power source. See power source pages to check. Swing cycle time must be at least one second.

Swing Clamps

7250 psi max
Single and double acting

Connecting possibilities

Tube connection

Top Flange with O-ring
sealing for manifold mounting

FLUID CONNECTION: 1/4 BSPP Port fittings with optional manifold mounting.

CONSTRUCTION: Sturdy helical-cam mechanism first rotates arm, then clamps. Integral safety clutch. Unit sealed to keep out dirt and chips.

INFO+: See pages 634-635 for arm options. Also available in 60° and 45° swing.

Swing Clamps ■ R-Series ■ B1.853

Swing Clamps ■ Top flange type with pipe thread and manifold connection options
Double Acting ■ Max. Operating Pressure ■ 5075 psi (350 bar)

The hydraulic swing clamp is a pull type cylinder where a part of the total stroke is used to swing the piston, for when it is essential to keep the clamping area free for unrestricted workpiece loading/unloading. High clamping force at low pressures. Can be mounted in any position. The robust swing cam allows

for maximum life at the fastest swing speeds. Standard FKM seals. Special swing angle and indexing of clamp arm available. Multiple pneumatic and electric position monitoring available. Metallic wiper option. Four sizes allow the designer to choose the optimal clamp for their application.

Push Clamps/Cylinders

Mini
page 625

Single Acting
page 626

Threaded-Body Push Clamps

Achieve high force in a compact size. Wide variety of types and sizes. Various models offer different mounting options, such as using accessory brackets, screwing directly into fixture, or manifold mounting.

Accessories, page 643

Block Clamps
pages 629-647

Block Clamps

Block Clamps are easy to mount horizontally or vertically on flat surfaces.

Available single and double acting, are excellent for punching and assembly operations, with high forces available. Wide range of sizes. Large sizes are often used for presswork applications (up to 180 tons).

**Threaded-Body
Universal Cylinder**
pages 631-632

Threaded-Body Universal Cylinder

Achieve space-saving mounting in fixture walls with this universal cylinder, in a wide range of sizes. Alternatively single acting with spring return or double acting.

Threaded-Body Push Clamps - Mini

7250/2300 psi max
Single acting

**Tube Mount
(Metric Only)**

Manifold Mount

- Can be mounted very close together
 - High force in a small size
 - Mount using accessory brackets or screw directly into fixture
 - Positive stroke stop and long plunger guide for superior reliability
 - Choice of five sizes
- **Do not use NPT fittings**

DESCRIPTION: These threaded body cylinders are particularly suitable for clamping of smaller workpieces in multiple clamping fixtures. Sealing is made by connecting directly to compression nut or by the included sealing washer. Multiple mounting options allow versatility when designing your fixture. Offered as flush mount piston or extended piston. High-speed cylinders are offered at a lower max. pressure.

IMPORTANT NOTES: These cylinders may not be subjected to load in the retracted position. The tube connection model has no stop for the tube, so it cannot be used for pre-mount of the compression sleeve. Please protect cylinders from chips and coolant.

Threaded-Body Push Clamps - Standard Wiper

7250 psi max
Single acting

- Can be mounted very close together
 - High force in a small size
 - Mount using accessory brackets or screw directly into fixture
 - Positive stroke stop and long plunger guide for superior reliability
 - Choice of five sizes
- **Do not use NPT fittings

Figure 1
Figure 2
Figure 3
Mounting Options

See Threaded-Body Push Clamp accessories section

MOUNTING ON FIXTURE BASE: (Figure 1) Fasten mounting block to fixture. Screw clamp into block. (See table below for recommended seating torque. Sealing washer provided). Block has male 37° fluid connection.

MANIFOLD MOUNTING: (Figure 2) Screw clamp into tapped hole prepared as shown below. Supply fluid through passages drilled in fixture. Smallest size may be mounted with optional sealing nut. (Part no. CLR-508-TBA, 7/8 Hex. x. 46 thick).

MOUNTING THROUGH FIXTURE WALL: (Figure 3) (Through a tapped or bored hole). Secure clamp using optional locknut or mounting flange (two required for bored holes). Feeder cap required for fluid connection.

CONSTRUCTION: Steel plunger, case-hardened and ground. Positive stroke stop prevents over-extending the plunger. Long plunger guide provides support against side loads. Do not load plunger in its retracted position. Carbon steel body, black oxide finish.

PLUNGERS: Choose solid, tapped, or swivel plunger. Tapped plunger accepts contact bolts. Swivel plunger distributes force to prevent marring. Plunger extensions available by special order.

See F&A section for contact bolts

Threaded-Body Push Clamps

Application Examples

V-block fixtures allow very close workpiece spacing. Bottom example shows bridging bolt parallel to, and in the same plane as, the push clamps. This eliminates bending moments in the fixture.

Custom clamping unit made using a pivoting lever with a return spring. By altering the lever ratio, you can make workpiece contact greater or less than clamp force.

Twin clamping levers hold an exhaust manifold under extreme space limitations. Clamps are almost totally clear of workpiece area.

Pivoting levers clamp two angle brackets against a central locator. Each lever also has a pivoting contact pad to distribute clamping force evenly.

Block Clamps

7250 psi max
Single and double acting

- Easy to mount on flat surfaces
- Excellent for punching and assembly operations (very high forces available)
- Mount either horizontally or vertically
- Available with short or long stroke
- Choice of eight sizes
- Do not use NPT fittings

CLAMPING ACTION: Fluid pressure advances plunger. Spring return. Optional fluid-return version (double-acting).

STROKE LENGTH: Short-stroke version is more compact. Choose it whenever possible. Longer strokes than listed below are available in all sizes...please contact factory.

MOUNTING: Either fasten with long cap screws through the block and threaded into fixture, or tap holes in block to accept screws. See below for locations to drill additional holes if desired. If clamping thrust is not backed up by the fixture, a support should be provided to prevent slight screw shifting in the mounting holes...see example below. Support may be a rectangular strip or dowel pins (height should be at least 1/3 of B dimension). Male 37° fluid connection (two with double-acting clamps).

CONSTRUCTION: Steel plunger, case hardened and ground. Body made from carbon steel, or nodular iron in larger sizes. Spring-return versions have a sintered-metal vent filter to keep out dirt. If flood coolant could enter through the vent, replace vent filter with a CLR-815-AF air-vent fitting.

ACCESSORIES: Contact bolts for plunger recommended...see F&A section.

OPTIONAL VITON SEALS: For high-temperature applications (up to 300°F maximum) we offer viton seals as an option in all sizes. Please contact factory for more information.

Block Clamps are ideal for punching and assembly operations. In this example, a small press is made using a Block Clamp and Hand Pump.

Threaded-Body Universal Cylinder

7250 psi max
Single and double acting

- 6 piston diameters from 16 up to 63mm
- 3 different strokes per size
- Sealing with very little leakage
- Alternatively single acting with spring return or double acting
- Ports 1/4 BSPP at the cylinder bottom
- Axial regulation due to external thread
- Lock nuts as per DIN 1804 can be used
- Space-saving mounting in fixture walls
- Piston rod with internal thread for fixing of different contact bolts

DESCRIPTION: The threaded-body universal cylinders are delivered with the same piston diameters and strokes as the well-proven block cylinders. Hydraulic connection is exclusively effected at the cylinder bottom by hydraulic tubes or hoses.

Sealing of the case-hardened piston rod is made by a tandem sealing with minimum leakage and a wiper.

APPLICATION: The threaded-body universal cylinders can be used as clamping cylinders for workpiece clamping as well as for general motion tasks.

For temperatures exceeding 100°C a version with VITON® seals is available. Fixing is made in cross holes with 2 lock nuts or in threaded holes with 1 lock nut. The lock nuts allow exact positioning of the cylinder in axial direction.

BLEEDING OF THE SPRING AREA FOR SINGLE-ACTING VERSIONS: If there is a possibility that aggressive cutting lubricants and coolants penetrate through the sintered metal air filter into the cylinder's interior, a vent hose has to be connected and be placed in a protected position, see accessories.

Installation Possibilities

For this purpose the sintered metal air filter has to be exchanged by an insertion nipple fitting, or a corresponding male connector, see accessories.

Pull Clamps

Page 634-635

Hollow-Plunger Clamps

Insert stud through center hole. Quickly converts clamps straps from manual to power operation. Ideal for pulling or pushing a draw bar, and many other applications.

Use in combination with push-pull bolt and "C"-washer to clamp workpieces with center holes.

In a machine table, the workpiece can be supported by a work support after clamping with a hollow-piston cylinder in combination with a sequence valve.

Use for a milling fixture, in conjunction with hollow piston cylinders.

Hollow-Plunger Clamps

7250 psi max
Single and double acting

- Quickly converts clamp straps from manual to power operation
 - Accepts stud through hollow plunger
 - May be used either to pull or to push
 - Useful for transmitting force to a remote location via a rod
 - Choice of six sizes
- **Do not use NPT fittings**

DESCRIPTION: The piston of this cylinder is provided with a through hole or internal thread. In connection with a standard tie rod and C-washer combination, a variety of applications are possible.

The thread in the piston can be drilled out, if required. If the hollow-piston cylinder is mounted onto movable parts, e.g. clamps, the oil has to be supplied through a high-pressure hose.

CLAMPING ACTION: Fluid pressure pushes up plunger, pulling up a clamping stud inserted through center hole. Spring or fluid return.

CENTER HOLE: Choose either threaded or unthreaded center hole. Threaded version is ideal for pulling/pushing a drawbar or replacing a nut on a clamp strap. Unthreaded version is useful when clamp is removed for workpiece loading.

IMPORTANT NOTES: For operating pressures exceeding 5000 psi, use a grade 8 stud or equivalent.

It is important to torque the lock nut used sufficiently to prevent damaging the piston threads.

Penetration of aggressive cutting lubricants and coolants through the sintered metal air filter into the cylinder's interior should be avoided by appropriate arrangement or covering.

Installation Possibilities

Application Examples

Hollow-piston cylinders in combination with push-pull bolt and "C"-washer can be used efficiently in many cases to clamp workpieces with center holes.

In the shown machine table, the workpiece is supported by means of a work support after clamping with a hollow-piston cylinder in combination with a sequence valve.

The savings in workpiece exchange time, compared to a mechanical clamping system amounts to 58%.

This clamping fixture is for milling operation on a light extruded rail. Workholding by means of hollow-piston cylinders in individual clamping stations mounted on a base plate. Positioning and support of the rail is effected with two longitudinal members matching the cross section of the rail.

Work Supports

7250 psi max
Single and double acting

Automatically adjusts to proper height for supporting workpiece. Prevents deflection and vibration due to machining forces. May also be used underneath clamps to back up clamping force. More accurate, more consistent, and much faster than screw jacks.

Precision sleeve around support plunger holds it absolutely vertical while unlocked, then locks it securely when fluid pressure is applied. Plunger remains perfectly stationary during locking. Far better accuracy and repeatability than earlier segmented-collet or sandwiched-plate work supports. Choice of three actions:

Threaded Body
pages 637-641

Spring Extended (Plunger floats then locks)

Plunger is normally extended by light spring force. Workpiece's weight depresses plunger to proper height. Applying fluid pressure locks plunger securely.

Threaded Body
pages 637-641

Fluid Advanced (Plunger advances then locks)

Plunger is normally retracted for clear loading/unloading. Applying fluid pressure gently advances plunger to the workpiece, then automatically locks it. Note: do not use advancing plunger to lift loads.

Threaded Body
pages 637-641

Air Advanced/Extended (Plunger floats or advances by air pressure)

Plunger is normally retracted for clear loading/unloading. Applying air pressure advances plunger to the workpiece. This allows fine tuning contact pressure using a simple air regulator. Contact force may be as light as a few ounces. Applying fluid pressure locks plunger securely.

CLR-200-WS**

**Air-Advanced
Work Support
with Base
CLR-100-WS**

**Base Only
CLR-712-WSA**

**Base Only
CLR-711-WSA**

- Amazingly compact threaded body work support, only 1-1/4 inches in diameter!
- Height adjusts automatically with repeatability with $\pm .0002$ inches
- Choice of two sizes in each of three-action types, plus a long-stroke fluid-advanced model (1700 lbs)
- Support plunger held by an advanced design, sliding-fit pressure sleeve (holds plunger absolutely vertical, locked or unlocked)

SUPPORT ACTION (SPRING EXTENDED): Plunger is normally extended by light spring force. Workpiece's weight depresses plunger to proper height. When fluid pressure is applied, precision sleeve grips plunger, locking it securely.

SUPPORT ACTION (FLUID ADVANCED): Plunger is normally retracted for clear workpiece loading/unloading. Applying fluid pressure gently advances plunger to workpiece, where it contacts with light spring force. When fluid pressure is applied, precision sleeve grips plunger, locking it securely. Plunger retracts again when pressure is released.

SUPPORT ACTION (AIR ADVANCED): Plunger is normally retracted for clear workpiece loading/unloading. Applying air pressure gently advances plunger to workpiece. A simple 3-way air valve, fine pressure regulator, and air dryer are required. Fine tune contact pressure using regulator. When fluid pressure is applied, precision sleeve grips plunger, locking it securely. Plunger retracts again when air pressure is released. Air-advanced version is also available without spring return for extremely sensitive contact-force adjustment (part no. CLR-7990-284-WS without base, CLR-110-WS with base).

ACCURACY: Height repeatability $\pm .0002$ inches. Excellent repeatability because (1) sliding fit sleeve keeps plunger absolutely vertical while unlocked, avoiding inaccuracy due to locking a tilted plunger, and (2) locking force is entirely radial, so plunger stays absolutely stationary during locking. Elastic deflection of plunger is only $.00016$ inches per 100 lbs. machining load.

MOUNTING: Screw work support into a tapped hole prepared as shown below. Hole bottom must be perpendicular to the hole's axis, with a 125 RMS maximum surface finish. Minimum seating torque 50 ft.-lbs. Supply fluid through passages drilled in the fixture.

SEQUENCING: If workpiece is too light to depress plunger (spring extended) or light enough that plunger contact may lift it (fluid advanced), a sequence valve is recommended. Sequence valve delays locking or advancing the plunger until after the workplace is clamped.

CONSTRUCTION: Steel plunger, hardened and ground. Plunger held inside a honed locking sleeve (sliding fit). Carbon steel body, black oxide finish. Hardened contact bolt furnished.

Work Supports ■ R-Series ■ B1.9405

Thr. Body Work Support ■ M26 size ■ 3 types of function - Hydraulic, Air, Spring Single Acting ■ Max. Operating Pressure ■ 5075 psi (350 bar)

Work Supports are used to provide a self-adjusting rest of workpieces to minimize vibration and deflection from machining forces. This family is one very compact size (M26) with three actuation types (Spring, Air, or Oil extended). They are designed with an integrated metallic wiper edge backed up by an FKM wiper to provide excellent resistance to chips and fluid. All internal components are made of highly corrosion resistant materials. Ventless design.

Work Supports ■ R-Series ■ B1.943

Thr. Body Work Support ■ 4 sizes ■ 3 types of function - Hydraulic, Air, Spring Single Acting ■ Max. Operating Pressure ■ 7250 psi (500 bar)

Work Supports are used to provide a self-adjusting rest of workpieces to minimize vibration and deflection from machining forces. This family of products provides multiple mounting options and four sizes within each of the three actuation types (Spring, Air, or Oil extended). They are designed with an integrated metallic wiper edge backed up by a FKM wiper to provide excellent resistance to chips and fluid. All internal components are made of highly corrosion resistant materials. If additional protection is required, the work supports can be piped to have a low-pressure air blow-off from the wiper area.

Installation and connecting possibilities

Drilled channels

O-Ring connection

Tube connection

The Protection Cap can be installed between the contact bolt and plunger to protect the wiper area from high pressure coolant and chips.

Work Supports ■ Threaded-Body Work Support ■ B1.944

Threaded-Body Work Support ■ with metal wiper ■ optional contact control Double Acting ■ Max. Operating Pressure ■ 7250 psi (500 bar)

Hydraulic work supports are used to provide a self-adjusting rest for workpieces and avoid vibration and deflection under machining loads. The threaded-body design allows for space saving by direct installation into the fixture body. Double-acting allows for a defined time on the return stroke of the support plunger for cycle-dependent applications. Metallic wiper edge and FKM wiper come standard. To guarantee

performance a vent port is imperative; by connecting a slight pneumatic pressure to the venting system the work support is effectively protected against the penetration of liquids. If a strong coolant jet is directed onto the support plunger or wiper edge an optional protective cap is available. Also optional is pneumatic workpiece contact control, allowing recognition of when work support has contacted the workpiece.

The Protection Cap can be installed between the contact bolt and plunger to protect the wiper area from high pressure coolant and chips.

Power Vises and Concentric Clamping

Power Machine Vises

Carr Lane Roemheld has a wide variety of machine vises for your applications, made of the finest quality construction for excellent rigidity and durability. More varieties can be found in the Machining Vises section at clrh.com.

NC-Series Machining Center Vises
pages 644-645

Machining Center Vises — NC-series Vises, available with or without gauge, are available in both hydraulic and hydromechanical versions. The hydraulic version provides automatic power clamping with exact high force at the push of a button. The hydromechanical version is manually operated, with final high force applied easily using hydraulic power assist.

MC-P Fixed Jaw Vises
page 651

MC-P Z Concentric Vises
page 652

MC-P ZB Position Flexible Vises
page 653

MC-P Vises are especially advantageous for 5-axis machining. Compact design allows for collision-free tool paths and access to all 5 sides with short standard tools. The patented three-piece segment design allows for a high degree of precision. Due to the predesigned swarf protection, they are particularly suitable for use in pallet systems.

Concentric Vises
pages 656-657

Concentric Vises offer quick, accurate clamping of odd-sized workpieces. These vises may be used in machining centers, on machine tools and final processing machines as well as in special jigs and fixtures. These self-centering vises position and clamp workpieces precisely on a defined symmetrical axis, allowing for any contours, and have a high clamping repeatability of $\pm 0.01\text{mm}$.

Vise Jaws and Accessories
pages 660-661, 666-669

Power Vises and Fixturing Systems

**CL5® Quick-Change
Five-Axis Workholding**

page 649

**Quick-Change
Five-Axis Workholding**

Accurate and versatile fixture for round, square, and hex-shaped workpieces. Mounts vertically or horizontally, and uses standard 5C collets. Advanced workpiece-release mechanism for flawless operation. Far better accuracy and repeatability than competitive collet vises. Workpiece is pulled solidly against the bottom stop for excellent height repeatability.

**DropZero
Modular Zero Point System**

pages 658-661

Modular Zero Point System

New DropZero Modular Zero-Point Clamping System enables complete machining of a workpiece in one setup, significantly reducing setup time and fixturing costs. With a few turns of a wrench, DropZero locates, supports, and securely clamps the workpiece from underneath, providing full machining access to 5 sides. Drop Zero can be used with modular or non-modular tooling.

With Fixed Jaw
page 662

Concentric
page 663

Position Flexible
page 664

Fixture Clamps

Fixture clamps consist of a very compact body with integrated hydraulic cylinders that actuate the movable jaw. All threads and ports are at the bottom which allows for a very tight and space savings arrangement. Accessory blank jaws are also available that can be milled to match the workpiece contour.

Machining-Center Vises ■ NC Series

5075 psi max
Single acting

**NC Series Hydra-Mechanical
(shown with gauge)**

- Hydraulic version provides automatic power clamping with exact high force at the push of a button (requires external power unit)
- Hydra-mechanical version is manually operated, with final high force applied easily using hydraulic power assist
- Finest-quality construction for excellent rigidity and durability
- Choice of three sizes

OPERATION OF HYDRAULIC VERSION: To set up initially, adjust jaw opening to the workpiece using the removable crank handle. When fluid pressure is applied by actuating the external power unit, the sliding jaw moves through its power stroke to apply full clamping force (.276" maximum stroke for safety). Unclamping is by positive spring return.

OPERATION OF HYDRA-MECHANICAL VERSION: Turning the crank handle clockwise moves the sliding jaw mechanically toward the workpiece. Once resistance is met, further turning automatically disengages the screw spindle and gradually applies full hydraulic pressure, with relatively little effort. Turn handle counterclockwise to unclamp.

MOUNTING: Vises are all slotted underneath for 20mm fixture keys, to provide accurate mounting on T-slotted machine tables. Use two Step Fixture Keys to adapt to a specific table-slot size (see tooling-component catalog section). A hardened steel pin fits into any of the adjustment holes on each side of the guide rails, to provide quick coarse adjustment of jaw opening.

ACCESSORIES: A crank handle is furnished with each vise. Optional right-angle-drive units (hydra-mechanical version only) are highly recommended if vises are mounted vertically.

NC Series Hydraulic

Horizontal Mounting

Accepts Top Jaws

Two-Axis Location

NC-Series vises are ideal for precision, high-production machining on all types of vertical machining centers.

Vise Accessories

Precision step jaws that mount on top of the fixed and sliding jaws, extending jaw capacity significantly. These hardened and ground jaws are keyed to maintain excellent positional accuracy, as well as height accuracy. Note: top step jaws for sliding jaws have a wider hole spacing than those for fixed jaws. Two mounting screws are included.

Top Step Jaws

Part No. for Fixed Jaw	Part No. for Sliding Jaw	Jaw Width	A	B	C ±.0004	D ±.0004	E ±.0004	F	G	H ±.0004

Extremely useful accessory for hydra-mechanical vises. Recommended when cranking from the end is difficult, especially when vises are mounted vertically.

Handy gauge for measuring clamping force in hydraulic or mechanical clamping systems. Flat side allows easier positioning in-line with the clamping force, especially for vises. Choice of two force ranges.

CARVESMART™ QUICK CHANGE VISE JAWS

QUICK • ACCURATE VERSATILE • STURDY

The patented CARVESMART™ Quick-Change Vise Jaw System is a complete package of dovetailed jaws for production and toolroom vises that are accurately changed in seconds.

- CLAMP NUTS: 1018 steel with QPQ wear and corrosion resistant surface treatment.
- SPEED SCREWS: Black oxidized, alloy steel differential screw. RH/LH travel moves twice as fast, lifts and pulls without gauling.
- SMARTstop™ is an internal-to-the-jaw set, slot and pin system for jobs that repeat.
- Extruded jaw stock can be cut to any length from 1/2" to 94", available in five profiles.
- Fully accessorized with dovetailed hard jaws, PERMAjaws and 1018 steel jaws.

Save \$\$ When Bundled with the NC Vise

Our NC vise is available with an *integrated force gauge* which tells you how much holding force is being applied to your workpiece. Minimal effort on the crank handle results in extremely high holding force because of the built-in hydraulic power of the vise. Now you'll know if your part is being held properly.

- Better clamping quality
- Correct clamping force every time
- Consistent process control
- Reduced tool breakage
- Workpiece deformation reduced
- Ideal for roughing and finishing
- Reduced operator fatigue

Visit clrh.com/carvesmart for more details, and to watch the video!

CL5 Quick-Change Five-Axis Workholding

**Subplate Mounted
On a Rotary Table**

- **Designed specifically for 5-axis machining**
- **Also suitable for standard machining**
- **INFO+: Use in conjunction with the vises and jaws in the next few pages, as well as the subplates on pages 373-394**

DESCRIPTION: The CL5® quick-change, 5-Axis workholding system consists of three components: a subplate, a riser, and top tooling made up of a vise or a fixture plate. The subplate transforms a T-slot table into a modular fixturing plate, allowing flexible and easy clamping and locating of other tooling and/or fixtures. Designed to get the part up from the machine table, the Quintus quick-change riser allows 5-side part access. The Quintus combines the riser, quick-change capability and precise location in one piece.

APPLICATIONS: The CL5® systems offers three primary methods of fixturing:

METHOD 1: Fixture Plate Mounted on a Rotary Table. This method is ideal for small rotary tables up to 210mm diameter. Fixture plates are accurately located and fastened directly to the rotary table.

METHOD 2: Quintus Quick-Change Riser Mounted on Rotary Table. The method provides additional height for spindle clearance. It allows you to quickly and accurately mount directly on rotary tables 250mm diameter and larger.

METHOD 3: Subplate Mounted on Rotary Table. This method is appropriate for all machines. The Quintus riser is mounted on a subplate to allow quick exchange of the riser with other fixturing.

Top Tooling Connects Directly to the Quintus Quick-Change Riser

Quintus Quick-Change Riser Connects to Any Subplate, No Extra Adaptors Required

Use Subplate Alone or With Risers and Plates
INFO+: See Subplates pages 373-394

Quick-Change Five-Axis Workholding ■ MC-P Fixed Jaw ■ WS 5.4501

MC-P Fixed Jaw Vise ■ Mechanically Operated Jaw Widths 40, 60, 100 and 125 mm

The workholding MC-P vises are especially advantageous for 5-axis machining. The patented three piece segment design allows for a high degree of precision. All essential components are made of hardened steel. Thanks to raising the spindle arranged in the upper part of the housing, deformation in the base during max. clamping is reduced significantly, improving stability and precision of the work-piece. The high force and stability eliminate the need for pre-stamping.

Compact design allows for collision-free tool paths and access to all 5 sides with short standard tools. Due to the predesigned swarf protection, they are particularly suitable for the use in pallet systems. The MC-P 100/125 are equipped to use on zero point clamping systems with threads for retractable nipples at the bottom side of the housing (nipples and pictured jaws not included). These clamps are intended to be used with hydraulic fluid only.

Application Example

3 workholding systems MC-P in 3 x 120° arrangement on a 5-axis machining center.

Accessories

- Clamping jaws and jaw inserts, accessories for mounting, positioning and operation see data sheet WS 5.450Z
- Rapid change block Quintus see data sheet WS 5.6150

Customized Versions

MC-P workholding systems can also be delivered as customized versions. For example in hydraulically-operated versions, other lengths or with individual mounting holes. Please contact us.

MC-P Z Balance Position Flexible Vise ■ Mechanically Operated
Jaw Widths 60, 100 and 125 mm

The workholding MC-P ZB vises are especially advantageous for 5-axis machining. It has a position flexible clamping point. This allows for similar workpiece with a variable clamping point to be utilized in the same fixture. The jaws move concentrically to the clamping point on the prelocated fixed workpiece. Once one jaw makes contact to the part the opposite jaw is the only one going to travel. When both jaws make contact with the workpiece, the desired clamping force is applied by means of a torque wrench. This does not deform the workpiece because the clamping point is still floating. Finally the locking spindle is used to lock the jaws into place.

The patented three piece segment design allows for a high degree of precision. All essential components are made of hardened steel. Thanks to raising the spindle arranged in the upper part of the housing, deformation in the base during max. clamping is reduced significantly, improving stability and precision of the workpiece. The high force and stability eliminates the need for pre-stamping. Compact design allows for collision-free tool paths and access to all 5 sides with short standard tools. Due to the predesigned swarf protection, they are particularly suitable for the use in pallet systems. The MC-P ZB 100/125 are equipped to use on zero point clamping systems with threads for retractable nipples at the bottom side of the housing (nipples and pictured jaws not included).

Application Example

Clamping of aluminium bars with workholding system MC-P 100 Z Balance.

Accessories

Quintus Riser ■ Quick-Change Riser
Max. Retention Force per Clamping Pin ■ 4500 lbs

Quintus 1
Quick Change Riser

Quintus 2
Quick Change Riser

- Vises and fixture plates mount directly onto the Quintus Quick-Change Riser
- Two sizes
- Extremely accurate

The CL5® quick-change, 5-Axis workholding system consists of three components: a subplate, a riser, and top tooling made up of a vise or a fixture plate. The subplate transforms a T-slot table into a modular fixturing plate, allowing flexible and easy clamping and locating of other tooling and/or fixtures. Designed to get the part up from the machine table, the Quintus quick-change riser allows 5-side part access. The Quintus combines the riser, quick-change capability and precise location in one piece.

Quick Change for Non-Quintus Riser
see data sheet WS 5.6150.

Concentric Vises

**2175 psi max clamp
290 psi max unclamp**

Hydraulic Concentric

- High clamping repeatability ± 0.01 mm
- Constant length and large clamping ranges
- Any mounting position
- Possibilities for positioning and fastening customer-specific jaws
- Protection against coolant and swarf by integral wipers in the clamping slides
- Large stroke of the slide
- Limitation of the opening stroke by an adjustable set screw
- An additional pilot-controlled check valve can be fitted to the 'clamping' port

DESCRIPTION: Self-centering vises position and clamp workpieces exactly on a defined symmetrical axis, taking account of their contours.

They may be used in machining centers, on machine tools and final processing machines as well as in special jigs and fixtures.

Hydraulic clamping and unclamping is powered by an external pressure transmitter with a double-acting circuit.

The adjustable synchronizing device ensures high centering precision.

Connections:
 Port A - clamping
 Port B - unclamping
 S1 - oil lubrication slide 1
 S2 - oil lubrication slide 2

Includes:

- Fitting key, positioning and mounting holes for standard and special jaws
- Keyway across the length for positioning
- Clamping edge for claws
- Lubrication nipples and connections, respectively, for central lubrication.
- Oil ports 1/4 BSPP, A - clamping, B - unclamping

INSTALLATION (EXAMPLE) For hydraulic oil supply, pump units working intermittently are preferred. In the clamped position, the directional valves are idle, and the operating pressure is maintained by an integral check valve.

Two pressure switches (pump control and machine safety) monitor the adjusted operating pressure.

Clamping and unclamping can be controlled by hand-operated valves, by selector or foot-operated switch or, fully automatic, by signals.

Do not exceed 300 psi on unclamp circuit. Recommended power unit CLR-886-EP.

Modular Zero-Point System ■ DropZero™

DropZero ■ 5-Axis System ■ Locates, Clamps and Supports a Workpiece
Manual Operation ■ Max. Retention Force ■ 2700 lbs

- Reduces setup time and fixturing costs
- Modular design works with all of CLM's 1/2" and 5/8" modular tooling
- Can also be used with non-modular tooling
- Elevates workpiece for machine spindle clearance
- Access to all 5 sides of the part
- Stackable for added clearance
- High stability due to robust and wide design

New item!

With a few turns of a wrench, new DropZero Modular Zero-Point System quickly unloads and loads new parts in one setup, all while having access to all five sides of the workpiece. Pull studs (round, diamond, and floating) are mounted directly to a part, and clamp modules can be mounted to any fixture plate and can be stacked for added height. DropZero gives you better part quality due to a completely machined part in one setup, reduced fixturing costs, and simpler tool paths.

Application Examples

Four DropZeros mounted on a Carr Lane Mfg. modular fixturing plate holding an aluminum billet part.

Example of side work for vertical applications.

DropZero ■ 5-Axis System ■ Mounting Options

Tilting torque calculation example

Benefit from our specialist competence

Example:

DropZero clamps, 4x, with 200 x 200 mm spacing and max. feed thrust force of 7 kN with distance of 400 mm.

Question:

Due to the predominance of roughing work, the system should be checked for 2x safety factor. Is the retention force, number of DropZero clamps and the selected spacing right for this application?

Solution:

$$M_D > 2 \times M_T ?$$

$$M_T = F_V \times L_V = 7,000 \text{ N} \times 0.4 \text{ m}$$

$$M_T = \mathbf{2,800 \text{ Nm}}$$

$$M_D = 2 \times (F_D \times L_1) + 2 \times (F_D \times L_2)$$

$$M_D = 2 \times F_D \times (L_1 + L_2)$$

$$L_1 = \text{ØD} / 2 = 0.0889 / 2 = 0.04445$$

$$L_2 = \text{ØD} / 2 + \text{Spacing} = 0.04445 + 0.20 = 0.24445$$

$$L_1 + L_2 = \text{ØD} + \text{Spacing}$$

$$L_1 + L_2 = 0.0889 \text{ m} + 0.20 \text{ m} = 0.2889 \text{ m}$$

$$M_D = 2 \times F_D \times (L_1 + L_2) = 2 \times 12,000 \text{ N} \times 0.2889 \text{ m}$$

$$M_D = \mathbf{6,933.6 \text{ Nm}}$$

$$M_D / M_T > 2 ?$$

$$M_D / M_T = 6,933 \text{ Nm} / 2,800 \text{ N} \quad M_D / M_T = \mathbf{2.4 > 2} \checkmark$$

With this design, a safety factor of two is provided. All dimensions to be entered in SI units (meters, Newtons).

M_T : Moment from Feed Thrust Force

M_D : Moment from Retention force

F_T : Feed Thrust Force (7,000 N)

F_D : Retention force (12,000 N)

Spacing = 200 mm = 0.20 m

Ø D: 88.9 mm = 0.0889 m

L_T : 400 mm = 0.40 m

Modular Zero-Point System ■ DropZero® ■ Bundle Kits

Application Examples Of Pull Stud Arrangements

Standard Pull Stud Kits

Every standard Pull Stud Kit comes with at least one Zero-Point Pull Stud, one Diamond Pull Stud and one Locating Dowel. These are good for applications that require high repeatability between change overs.

Bundle Kit Part No.*	Quantities in Each Kit					
	DropZero CLR-DZ12-889-598	Locating Dowel CLR-DZ12D-15	Cap Screw CLR-M10-1.50X16-SHCS	Zero Point (Round) Pull Stud CLR-DZ12N-20Z	Diamond Pull Stud CLR-DZ12N-20D	Floating Pull Stud CLR-DZ12N-20F
CLR-DZ12K-2S	2	2	2	1	1	-
CLR-DZ12K-3S	3	3	3	1	1	1
CLR-DZ12K-4S	4	4	4	1	1	2
CLR-DZ12K-5S	5	5	5	1	1	3
CLR-DZ12K-6S	6	6	6	1	1	4

* Add "F" to the end of any of the above part numbers to make all the pull studs in the kit "Floating Pull Studs" part number CLR-DZ12N-20F.

* Add "-500" to the end of any of the above part numbers to replace the CLR-DZ12D-15 Locating Dowels with CLR-DZ12T-500Z 1/2-13 Locating Studs for use with Carr Lane Mfg. modular tooling.

* Add "-625" to the end of any of the above part numbers to replace the CLR-DZ12D-15 Locating Dowels with CLR-DZ12T-625Z 5/8-11 Locating Studs for use with Carr Lane Mfg. modular tooling.

Non-Standard Pull Stud Kits

Non-standard Pull Stud Kits come with Locating Dowels and our Floating Pull Stud that does not have a locating shoulder for mating with your part or pallet. These are best used for setup applications that do not require high repeatability between change overs or when probing will be done prior to machining.

Bundle Kit Part No.*	Quantities in Each Kit			
	DropZero CLR-DZ12-889-598	Locating Dowel CLR-DZ12D-15	Cap Screw CLR-M10-1.50X16-SHCS	Floating pull stud without pallet/ part locating shoulder CLR-DZ12N-195

Fixture Clamps, Concentric ■ Compact vise with jaw widths 1.57" and 2.56" Double Acting ■ Max. Operating Pressure ■ 3625 psi (250 bar)

The concentric fixture clamp consists of a very compact body with two integrated hydraulic cylinders that actuate the movable jaws. The piston forces are transferred to a "V" linkage (see cut away below). The "V" linkage then pulls the jaws together in a self-centering fashion. All threads and ports are at the bottom

which allows for a very tight and space savings arrangement. If fastening from the bottom is not possible an adaptor plate for manifold mounting or tube connection is available. Accessory blank jaws are also available that can be milled to match the workpiece contour.

Pipe thread

The position flexible fixture clamp consists of a very compact body with integrated hydraulic cylinders that actuate the movable jaws. The piston forces are transmitted via two channels to the clamping slides. The design allows the clamping slides to move independently of each. A minimal contact force is applied to the part until both jaws are in contact with the workpiece. At that point the pressure builds

along with the clamping force. All threads and ports are at the bottom which allows for a very tight and space savings arrangement. If fastening from the bottom is not possible an adaptor plate for manifold mounting or tube connection is available. Accessory blank jaws are also available that can be milled to match the workpiece contour.

Application example
Clamping fixture for a pedal of a freight vehicle.

Power Sources

Electric Power Units
pages 667-670

Electric Power Units

Electric Power Units are the best power source for most uses. Complete, compact, quiet, and fully automatic. Include pump, reservoir, switches, valves, gauge, and numerous safety devices. Extremely long life. Enough fluid capacity for virtually any fixture. Up to 7250 psi output pressures. 120, 220, or 440 volt.

Air Power Units
pages 671-672

Air Power Units

Economical power source, driven by shop air pressure, includes pump, reservoir, valves, gauges, air filter, muffler, and air extractor/dryer. Very quiet. Ideal for hazardous locations. Enough fluid capacity for virtually any fixture. Up to 7250 psi output pressure.

Compact Air Power Units
page 673

Compact Air Power Units are ideal for smaller hydraulic clamping and assembly fixtures with single or double-acting hydraulic elements. Ordinary shop air is all that is required to drive these units.

Power Sources

Single Stage Pump
pages 674

Hand Pumps

Manual power source for moderate-size factors. Compact and portable. Ideal for sensitive test fixtures. Choice of hand or foot operation.

Screw Pumps
pages 675

Screw Pumps

Small enough to mount directly on fixture. Operate manually or with a power torque wrench. Ideal for rotary index tables and palletized fixtures where a feed line is impractical.

Compact Hydraulic Intensifier
pages 676-677

Hydraulic Intensifiers

Hydraulic Intensifiers convert hydraulic pressure on the input to a higher pressure on the output. This compact cylinder style intensifier enables the use of the comparatively low pressure of machine tool hydraulics to pressurize hydraulic clamping fixtures with a correspondingly increased input pressure.

Electric Power Units

7250/5000 psi max
Single and double acting

Standard

- Complete power unit with electrical and hydraulic controls
- Totally enclosed fan cooled single and three phase universal motors
- Thermal overload relay with automatic reset when normal conditions return
- Remote clamp-unclamp push button switch(s)
- Pressure adjustable from 1500 to maximum
- Quiet long life radial piston pump
- Filler breather with inlet screen
- Leak free fittings and poppet valves

SETUP AND OPERATION: Connect to fused electrical supply, fill with clean, approved hydraulic fluid and connect to fixture. Mount push button clamping switch near the operator (two furnished with shuttle machine units). Push one button to clamp and unclamp.

OPERATING PRINCIPLES: The heart of the unit is a precision, long-life radial-piston pump controlled upon pressure demand by the integral pressure switch. This switch is adjustable, to give you precise and repeatable clamping forces. Automatic pressure control is assured, because the pump restarts if pressure drops. Clamping pressure is assured even with an electrical power failure since the solenoid valves are mechanically held in the clamped position - and only need power to unclamp. The poppet design of these valves means positive, leakage-free sealing.

Electric Power Units

7250/5000 psi max
Multi-Pressure in single and double acting

Multi-Pressure Pumps

- Complete power unit with electrical and hydraulic controls
- Enclosed fan-cooled single or three phase motor with thermal protection
- Combination temperature/ level switch for pump protection
- Remote clamp-unclamp push button switch(es)
- Pressure adjustable from minimum to maximum as shown in pump chart
- Quiet long life radial piston pump
- Filler breather with inlet screen
- Leak free fittings and poppet valves
- Additional pressure gauges provided for reduced pressure circuits

SET-UP SUMMARY: Connect to fused electrical supply, fill with oil, and connect to fixture. Prime pump and adjust to desired pressure. Mount push button switch(es) near the operator. Push one button to clamp and unclamp. For complete set-up instructions, see operating manual.

OPERATING PRINCIPLES: The heart of the unit is a precision, long-life radial-piston pump controlled upon pressure demand by the integral pressure switch. This switch is adjustable, to give you precise and repeatable clamping forces. The secondary pressure is controlled by a poppet style pressure reducing valve. This secondary low pressure circuit is adjustable between 450 and 5500 psi. Automatic pressure control is assured, because the pump restarts if pressure drops. Clamping pressure is assured even with an electrical power failure since the solenoid valves are mechanically held in the clamped position - and only need power to unclamp. The poppet design of these valves means positive, leakage-free sealing.

Electric Power Units

7250/5000 psi max
Single and double acting

CONTROL OPTIONS: Electric Power Units are offered with three standard hydraulic/ electrical-control options: (1) Single acting, (2) Double acting, (3) Single acting for two independent fixtures.

The following hydraulic-circuit diagram shows a single-acting unit.

The diagram below shows a double-acting unit. Double-acting units can be used as single acting units simply by capping the return pressure connection, with a CLR-501-F cap fitting.

The third diagram shows a single-acting unit for two independent fixtures (shuttle machining). These units have separate clamping switches and valves for each fixture.

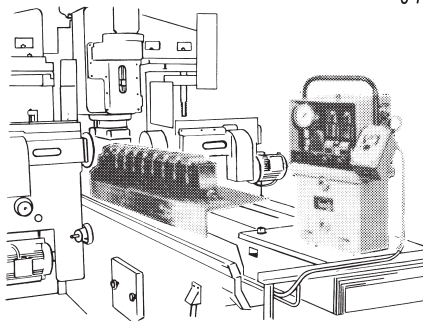

SAFETY FEATURES: Fail-safe operation in case of electrical-power failure since the solenoid-operated clamping valves are de-energized in "clamped" position. These valves are poppet type, so they provide tight zero leakage sealing. Units are also equipped with fluid-level and fluid-temperature sensors to protect power units from abuse. If fluid level drops below a minimum level or fluid temperature exceeds 140° F, the unit shuts off and lights an LED. When fluid is replenished or temperature drops, the unit resets itself automatically.

MOUNTING: Mount unit upright, preferably above fixture level to keep unit clean. We offer an attractive, economical power-unit stand (below) that bolts to the floor. For mounting directly on machine-tool tables, we offer a vibration-proof mount (also below).

Power Unit Stand
CLR-3532-168-PUA

Vibration-proof mount
CLR-3141-308-PUA

Units can also be mounted on the machine tool using an angle bracket. The photo below shows an overhead traverse bar for convenient hose arrangement. Push-button switches are installed within the operator's reach.

PRESSURE SETTING: Set system pressure by adjusting the setting screw (5) on the unit's pressure switch (4) in combination with the knurled knob (3) on the unit's pressure-relief valve (1). Basically, the pressure switch establishes the minimum system pressure (10% drop below setting) and the pressure-relief valve establishes the maximum in case of over pressurization.

DUTY CYCLE: Electric Power Units are designed specifically and purely for workholding, with intermittent clamping and unclamping between machining cycles (not continuous running). For most workholding applications, actual running time is a small percentage of total cycle time. The graph below shows typical pump-pressure buildup during a machining cycle.

Run time must be less than 40% of total cycle time with maximum fluid level, 25% with minimum fluid level (7250-psi units). Run time must also be less than 120 seconds with maximum fluid level, 15 seconds with minimum fluid level (7250-psi units). Otherwise the fluid will overheat and the unit will shut off automatically.

Electric Power Units

Connection Examples

**Single Fixture
Single Acting**
(use any Electric Power Unit)

**Single Fixture
Double Acting**
(use CLR-933-EP or CLR-833-EP)

**Two Fixtures
Single Acting**
(use CLR-935-EP or CLR-835-EP)

**Multiple Parts Clamped Independently
Single Acting or Double Acting**
(use any Electric Power Unit)

Air Power Units

7250 psi max
Single and double acting

- Economical and self-contained. . . just fill with fluid
- Up to 7250 psi from shop air pressure (only 70-psi air pressure required)
- Tandem, reciprocating pump automatically restarts to maintain system pressure
- Holds pressure even if air supply fails
- Safe in hazardous locations
- Complete turnkey unit includes clamping valve, filter/regulator/lubricator, air and hydraulic pressure gauges, muffler, and air extractor/dryer

** Do not use NPT fittings

OPERATION: Unit is ready to run after you fill the reservoir with fluid (order separately, F&A section) and connect it to an air supply. Adjust the input air pressure, using the unit's air regulator, to adjust output fluid pressure (2200 to 7250-psi range). Only 70-psi air pressure is required to provide 7250-psi fluid pressure.

FLOW CONTROL: When using these power units in small circuits containing a Swing Clamp, Extending Clamp, or fluid-advanced Work Support, a simple flow control valve may be necessary. If clamps do not cycle properly, install flow control valve anywhere along the fluid lines to control flow to any or all workholding components.

Control Option 1
Single acting.
Clamp/unclamp valve mounted on power unit.

Control Option 2
Single acting.
Remote control.
Includes 10-ft air hoses and air valve.

Control Option 3
Double acting.
Remote control.
Includes 4-way valve and two 6-ft hydraulic hoses (other lengths available).

Air Power Units

7250 psi max
Single/double acting

- The hydro-pneumatic pump unit can be operated with oil-free air.
- Due to suitable sound insulation only minimum working noises are obtained.
- The low starting pressure (40 psi) guarantees a quick start of the pump and short cycle time.
- The hydro-pneumatic pump unit is delivered ready for connection

APPLICATION: The hydro-pneumatic pump unit is particularly suitable for smaller hydraulic clamping and assembly fixtures with single or double-acting hydraulic elements. As the power supplied is compressed air, it can be used without restriction in hazardous surroundings.

OPERATION: Single acting version The single-acting hydro-pneumatic pump unit is manually operated. By operating the pedal the fixture will be clamped or unclamped. The pump delivers oil as long as necessary to achieve the desired hydraulic operating pressure. The air pressure is adjusted by a pneumatic service unit and maintained by an integrated check valve.

Double acting version By means of a locking device the pneumatic directional control valve (at the pneumatic side) is permanently in the opened switching position. By means of the mounted hand-operated hydraulic 4/3 directional control valve double-acting cylinders can be controlled. In the case of a pressure loss, the pneumatic pump operates automatically until the desired hydraulic pressure is realized.

Operating Pressure Range	4000-7250 psi

Hand Pumps

7250/3000 psi max
Single acting

Single Stage

- Very compact
 - Pump and release with the same lever
 - Easily adjustable pressure setting
 - Choice of hand or foot operation
- ** Do not use NPT fittings

CLAMPING: Move pump lever downward to pump fluid, through a 40-degree stroke. Lever returns upward by spring force. Repeat until you reach the set pressure and the lever declutches.

UNCLAMPING: Lift pump lever 10 degrees upward against spring force to release clamping force instantly.

CONSTRUCTION: Totally self-contained power source. Virtually wearfree due to metallic seal on pump piston.

Screw Pumps

7250 psi max
Single acting

Compact Block

Cartridge/Manifold Mounted

- Compact pressure source
- Ideal for rotary tables or pallets where fluids supply lines are impractical
- Excellent for holding pressure while fixture is transferred
- Can be used in multiples for more fluid capacity
- May be operated with a power torque wrench (non-impact)
- 7250 psi pressure from 38 ft-lbs torque
- ** Do not use NPT fittings

DESIGN CONSIDERATIONS:

1. Include a pressure gauge in the system (see F&A section).
2. All clamps and components must be leak free, so use only Roemheld products.
3. Since fluid capacity is limited, use only on small fixtures. For best results, clamps should use only 65% of total fluid capacity. Due to limited capacity, use only with smallest accumulator CLR-9606-102-PDA.
4. Systems must be bled carefully and designed to avoid air pockets. Include a separate fill plug on the cartridge mounted version, at the highest point in the system.
5. Mount block-type Screw Pump only horizontally with fluid fill port up.
6. For safety on palletized fixtures, use a control cylinder (F&A section) with a position sensor on the machine.

Within this diameter range, the port drilling should be located as high up as possible

Hole Preparation for manifold mounting

Hydraulic Intensifier

7250 psi max

APPLICATION: The hydraulic intensifier converts a hydraulic pressure on the primary side (input) into a higher pressure on the secondary side (output).

This enables the use of the comparatively low pressure of machine tool hydraulics to pressurize a hydraulic cylinder with a correspondingly increased intensification ratio.

DESCRIPTION: The construction of the hydraulic intensifier corresponds to the principle of pressurizing areas of different sizes. Regulation of the high pressure at the secondary side is made by regulation of the low pressure side and is directly proportional.

First the intensifier delivers a high flow

rate at a low pressure (displacement of the cylinders), with increasing counterpressure the intensifier switches automatically to pressure intensification. For unclamping, the cylinder is directly controlled with the low-pressure of the primary side (see example below).

FUNCTION: the oil is supplied through input **IN** via the check valves **RV1**, **RV2**, and **DV** to the high pressure output **H** and thereby to the cylinders. In this phase the intensifier is in rapid function. According to the intensification **i** the max. flow rate can be up to 10 liters/min. With increasing pressure in the cylinder the oscillating pump unit **OP** (pulsation) automatically functions. If the adjusted high-pressure is obtained, pulsation of the intensifier is stopped. Pulsation continues in case of dynamic application. Max. frequency of pulsation is 30 Hz.

To retract the cylinder, the internal check valve **DV** is controlled via port **R** and thereby free return through the intensifier is guaranteed.

IMPORTANT NOTES: The hydraulic oil must be perfectly filtered with particles not larger than nominally 10 micron. This is the reason why we offer a filter unit (part no. CLR-3887-087), which can be directly integrated in the tubing of the low-pressure side. If the intensifier will be used on uncoupled systems (no connection to the pressure generator) a pilot-controlled check valve should be mounted at the high-pressure side (consider min. control pressure for opening). For pilot-operated check valve, see valves section.

When designing an installation, pay attention that there can be leakage between the ports **IN** and **R** of the high-pressure intensifier.

Leakage rate approx. 50 cm³/min. When using the intensifier in uncoupled systems there will be a pressure increase in the unclamping line due to the leakage. — Please contact us.

Intensification Ratio	1.5	2.0	3.2	4.0	5.0
Max. flow rate Low-pressure side Q _{IN} (cu.in)	488	488	915	854	854

Hydraulic Intensifier

7250 psi max

APPLICATION: The hydraulic intensifier converts a hydraulic pressure on the primary side (input) into a higher pressure on the secondary side (output).

This enables the use of the comparatively low pressure of machine tool hydraulics to pressurize a hydraulic cylinder with a correspondingly increased intensification ratio.

DESCRIPTION: The construction of the hydraulic intensifier corresponds to the principle of pressurizing areas of different sizes. Regulation of the high pressure at the secondary side is made by regulation of the low pressure side and is directly proportional.

First the intensifier delivers a high flow rate at a low pressure (displacement of the cylinders), with increasing counterpressure the intensifier switches automatically to pressure intensification. For unclamping, the cylinder is directly controlled with the low-pressure of the primary side (see example on previous page).

FUNCTION: the oil is supplied through input **IN** via the check valves **RV1**, **RV2**, and **DV** to the high pressure output **H** and thereby to the cylinders. In this phase the intensifier is in rapid function. According to the intensification i the max. flow rate can be up to 10 liters/min. With increasing pressure in the cylinder the oscillating pump unit **OP** (pulsation) automatically functions. If the adjusted

high-pressure is obtained, pulsation of the intensifier is stopped. Pulsation continues in case of dynamic application. Max. frequency of pulsation is 30 Hz.

To retract the cylinder, the internal check valve **DV** is controlled via port **R** and thereby free return through the intensifier is guaranteed.

IMPORTANT NOTES: The hydraulic oil must be perfectly filtered with particles not larger than nominally 10 micron. This is the reason why we offer a filter unit (part no. CLR-3887-087), which can be directly integrated in the tubing of the low-pressure side. If the intensifier will be used on uncoupled systems (no connection to the pressure generator) a pilot-controlled check valve should be mounted at the high-pressure side (consider min. control pressure for opening). For pilot-operated check valve, see valves section.

When designing an installation, pay attention that there can be leakage between the ports **IN** and **R** of the high-pressure intensifier.

Leakage rate approx. 50 cm³/min. When using the intensifier in uncoupled systems there will be a pressure increase in the unclamping line due to the leakage. — Please contact us.

Intensification Ratio	3.2	4.0	4.8	6.2	7.5
Max. flow rate Low-pressure side QIN (cu.in)	490	490	490	490	490
Max. flow rate, High-pressure side QH (cu.in)	25	25	25	25	25

Clamping Valves

7250 psi max
Single or double acting

- Use to clamp several workpieces independently with a single power source
- For single-acting or double-acting clamps
- Zero-leakage poppet design with built-in check valve
- Extremely compact
- All electrical coils are continuous duty rated
- ** Do not use NPT fittings

Poppet Valves Spool Valves

Only Roemheld offers all zero-leakage poppet valves. Others use spool valves, which always have internal leakage due to clearance between the bore and spool.

DESIGN CONSIDERATIONS: Port connections and flow directions must be exactly as shown on the drawings. Otherwise the valves will not function correctly.

P - Pressure into valve from power

R - Return from valve to power source

A - Flow from valve to clamps and back

Use these valves only with the fluid types we recommend, CLR-2-FL equivalent on **INFO+** page 722). Fluid must be clean (10 micron or better nominal filtration).

SOLENOID OPERATED: Clamp and unclamp automatically using electrical signals from a machine-tool controller. Operate clamps all at once, or individually using one valve per clamp. Stays clamped even if electric power fails, since solenoid is de-energized in the clamped position. 24 Volts DC (+5/-10% allowable voltage deviation). 2000 cycles/hour maximum. 20 watts power consumption. 120, 220, and 440 volt AC valve also available.

DOUBLE ACTING UNITS

Double Acting

Mounting-hole pattern for manifold mounting. Grind surface flat, 32 Ra max. Order valves without base.

Single Acting

Standard DC Solenoid Valve

Type	Solenoid operated
Max. operating pressure (psi)	7250
Max. inrush draw (watts)	20
Max. flow rate (cu. in./min.)	490
Voltage (+5%/-10%)	24 VDC

Clamping Valves (4-Way)

7250 psi max
Single and double acting

- Use to clamp several work pieces independently with a single power source
- For double-acting clamps
- Zero-leakage double-poppet design
- ** Do not use NPT fittings

Heavy-duty for extra-long life. Unique double-poppet design for zero leakage. To use with single-acting clamps, use Port Plug CLR-810-F on Port B. Internal check valves ensure fail-safe clamping.

Application Example:

Two fixtures, with double-acting clamps, controlled independently.

Max. Oper. Pressure (psi)	7250
Max. Flow Rate (cu. in./min.)	730
Direction of Flow	See Drawing
Port Size	G1/4
Weight (lbs)	2.5
Part No.	CLR-302-V

Pressure-Controlled Closing Valves

7250 psi max

- Allows different operating pressures in two parts of a fixture
- Can be used on pallet fixtures disconnected from a power source, since no return line is needed
- Allows fine tuning the clamping force of selected components while keeping others constant
- Holds reduced pressure to exact setting, regardless of input pressure
- Zero-leakage poppet design

Symbol

Example:
Pressure-Controlled Closing Valve allows Swing Clamps to clamp a fragile part with light, adjustable force, while Work Supports hold using normal operating pressure.

Reduced-pressure adjustment range (psi)	High	Medium	Low
		2900-7250	870-3190
Max. operating pressure, input (psi)	7250	7250	7250
Repeatability (+/- psi)	150	150	150
Max. fluid flow rate (cu. in./min.)	730	730	730
Part No.	CLR-2953-002-V	CLR-2953-003-V	CLR-2953-001-V

Carr Lane Roemheld Mfg. Co.

Sales — Phone (314) 647-6200 Fax (314) 647-5736

Engineering — Phone 1-800-827-2526 Web roemheld-usa.com

Sequence Valves

7250 psi max

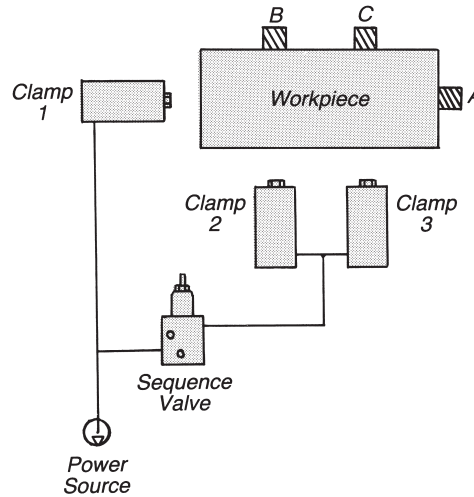

- Use to automatically sequence positioning, clamping, and supporting

- Easily adjustable trigger pressure

- Use in multiples for multi-step sequencing

** Do not use NPT fittings

DESIGN CONSIDERATIONS: Choose normal pressure-adjustment-range valves instead of low-range valves whenever possible. Normal range models offer a wider adjustment range, especially when used with an Air Power Unit. For multi-stage sequencing, set trigger pressures in steps of at least 750 psi (normal range) or 375 psi (low range).

STANDARD FITTINGS: Mount in line. Fasten with two #10 cap screws if desired.

MANIFOLD MOUNTING: Fluid enters and exits through two O-ring ports fed by drilled fixture passages. Mount on a ground surface (32 Ra max.) using three #10 cap screws.

SERIES MOUNTING: Use one input valve and up to five series valves. Only one pressure connection is required, to the input valves P port. The other valves are connected by an internal passage, sealed with an O-ring between each valve. All required plugs, O-rings, and nuts are furnished.

Example clamping sequence:

Workpiece to be positioned and clamped sequentially. Sequence valve set for 1500 psi trigger pressure.

1. When clamps are actuated, clamp 1 pushes workpiece against stop A.
2. As soon as pressure reaches 1500 psi, sequence valve opens.
3. Clamps 2 and 3 simultaneously push workpiece against stops B and C.
4. Fluid pressure rises uniformly in all clamps.

Trigger pressure adjustment range (psi)	Low Range	Normal Range
		150 to 2200
Max. operating pressure (psi)	7250	7250
Pressure change per turn (psi)	220	440
Maximum flow	490 cu. in./min.	490 cu. in./min.
A Dia.	7/8	1-3/32
B	4-5/16	5-3/4
Weight (lbs)	1.1	1.4

Pipe Connection Type

Symbol

- Allows operating a single clamp, or group of clamps, at a lower pressure than the rest of the fixture.
- Great new design that can be used on pallet fixtures disconnected from a power source, since no return line is needed
- Allows fine tuning of the clamping force for selected components while keeping others at full pressure
- Holds reduced pressure to exact setting, regardless of input pressure
- Zero leakage poppet design

OPERATION: Adjust the downstream pressure using the adjusting screw on top of valve. The valve shuts off downstream fluid flow as soon as the system pressure equals the set pressure. As long as the system is connected to the power source, the valve will open again, if additional fluid is required to maintain the downstream pressure. Valve is also ideal for use on palletized (uncoupled) systems.

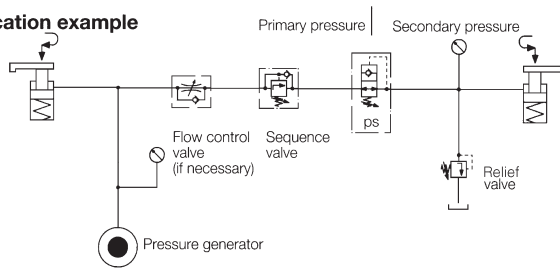

UNIQUE FEATURES: In normal systems (connected to power source) valve performs as a true pressure reducing valve, and in Palletized (uncoupled) systems as a pressure closing valve.

DESIGN CONSIDERATIONS: When using this valve in series with other valves (clamp/unclamp valves, sequence valves, etc.) the pressure reducing valve must be the one closest to the clamp(s) that it is protecting. When used in uncoupled systems, it is strongly recommended that a pressure relief valve be included to prevent pressure increases in the downstream (low pressure) side of the system.

Ports A, P and M = 1/4 BSPP

Application example

Limit curve of the lowest possible adjusting pressure $P_{A \text{ min.}}$ as a function of the operating pressure P_P

Primary pressure P_P (psi) (Operating pressure of the pressure generator)

Output pressure setting range (psi)	450 to 5500
Valve Type	Poppet
Max. operating pressure (psi)	7250
Output repeatability (psi)	±75
Max. hysteresis to re-open (psi)	375
Approx. pressure change per rotation (psi)	580
Max. fluid flow rate (cu.in./min.)	600
Range of adjustment (psi)	435-5510
Weight, approx. (lbs)	2.9
Part No.	CLR-2953-111-V

Carr Lane Roemheld Mfg. Co.

 Engineering — Phone 1-800-827-2526 Web roemheld-usa.com

Pilot-Operated Check Valves

7250 psi max

In-Line Mounted

- Holds clamping pressure until released by a separate pilot pressure line
- Allows only one-way flow until released
- Excellent safety device if fluid line to fixture may become damaged
- May be used to prevent workpieces from floating between opposing clamps
- Spring-loaded ball-seat valve (leakage free)

OPERATION: The flow from B to A is free. The flow from A to B is locked, but can be hydraulically unlocked by pressurizing control port Z.

CONTROL PRESSURE: To unlock the check valve for return flow, control (pilot) pressure must be greater than $(0.32 \times \text{Pressure}_A) + 175$ psi for the smaller valve and $(0.38 \times \text{Pressure}_A) + 175$ psi for the larger size.

MOUNTING: In-line mounting with tubing connectors. Control port Z is 1/4 BSPP. Ports A & B are 1/4 BSPP on the smaller size, 1/2 BSPP on the larger size. To reduce 1/2 BSPP to 1/4 BSPP, order adaptor CLR-3613-015-F.

DESIGN CONSIDERATIONS: This pilot-operated check valve is not suitable for locking of double-acting swing clamps (pull-type cylinders). Due to the unfavorable surface ratio of these elements, the control pressure is not sufficient for unlocking and dangerous pressure intensification can occur.

Example 1:

Workpieces remain clamped even if fluid line between power source and fixture becomes damaged.

Example 2:

Two opposing clamps (on right side) allow the workpiece to float between them to avoid distorting it. Without check valves, the workpiece would remain unstable since either clamp could retract or extend further by shifting fluid to the other. Check valves lock the clamps in their settled position by allowing only one-way flow.

Max. flow rate (cu. in./min.)	920	3360
Max. operating pressure (psi)	7250	7250

Shutoff Valves

APPLICATIONS:

1. Shutting off unused lines in a multi-purpose fixture.
2. Holding fixture pressure temporarily while transporting with power source disconnected.

DESIGN CONSIDERATIONS: Note: a shutoff valve cannot be used to clamp and unclamp. See valves section for clamping valves.

Max. operating pressure (psi)	7250
Mounting	In line
Lever Movement	90°
Weight (lbs)	0.7
Part No.	CLR-400-V

Relief Valves

APPLICATIONS: To protect hydraulic circuits from unexpected pressure increases, such as when the temperature of a closed system increases beyond maximum operating pressure.

CONSTRUCTION: Poppet-type valve, directly controlled.

Max. operating pressure (psi)	7250
Adjustment range (psi)	0-7250
Mounting	In line
Weight (lbs)	0.66
Part No.	CLR-2952-521

Flow Control Valves

APPLICATIONS: To restrict flow from highflow-rate power sources for proper component operation (Swing Clamps, Extending Clamps, and Fluid-Advanced Work Supports for example).

OPERATION: Turn knob for precision flow control in one direction, with unrestricted free flow in the opposite.

Max. operating pressure (psi)	7250
Mounting	In line
Weight (lbs)	0.7
Part No.	CLR-541-V

Check Valves

APPLICATION: Simple flow restrictor. Allows fluid to flow in only one direction (see arrow).

Cartridge-type check valves are also available. Please contact factory for more information.

Max. operating pressure (psi)	7250
Mounting	In line
Weight (lbs)	0.3
Part No.	CLR-9208-111

Rotary Couplings

7250 psi max
Single and double acting

Two Passage

Four Passage

Six Passage

Rotary couplings are frequently used on horizontal machining centers with rotary pallet changers. A reaction-bar linkage holds the top portion of each two-pass coupling stationary while the bottom portion revolves freely. Couplings are not designed to carry load. Side load will cause excessive, uneven wear resulting in failure.

Engineering — Phone 1-800-827-2526 Web roemheld-usa.com

Rotary Couplings

7250 psi max
Single and double acting

- **Best choice for feeding fluid to rotating pallet changers, due to constant connection.**
- **Ideal for rotary index tables.**
- **Can also be used for double-acting clamps.**
- **Choice of two, four, or six independent passages.**
- **Specials are readily available. Please contact factory.**

OPERATION: Each passage is supplied separately. This allows independent operation of two, four, or six (depending on model) sets of spring-return (single-acting) clamps.

MOUNTING: Either the top or bottom can be mounted by screws through the supplied holes. Do not hard mount both sides. Use anti-rotational key on one side.

DESIGN CONSIDERATIONS: The fluid pressure in the rotary coupling will add to the table's starting torque requirement and affect the maximum table operating speed. Please check the graph on the previous page. Fluid must be clean (10 micron or better nominal filtration). Couplings can not be side-loaded. Any weight applied will shorten the life of the unit.

Carr Lane Roemheld Mfg. Co.

Engineering — Phone 1-800-827-2526 Web roemheld-usa.com

Rotary Valve Couplings

7250 psi max
Single and double acting

- For rotary index tables with an independent load/unload station
- Unload and reload while all other stations remain clamped
- Unclamps automatically at load station, or via a clamping valve
- Available from stock for rotary tables with 2 through 8 stations

OPERATION: One half of the Rotary Valve Coupling rotates with the index table, while the other half remains stationary. Each time the table and coupling index, a new station automatically becomes the load/unload station. The coupling supplies fluid to the loading station separately from all other stations. The loading station can be either unclamped and resealed automatically as the coupling rotates, or controlled by a separate clamping valve.

CLAMPING MANUALLY: The loading station can be clamped and unclamped manually (or by a machine controller's electrical signal) using a 3-way valve mounted off the rotating table. This insures that a new workpiece will not move during indexing, before it is securely clamped. See valves section for hand-, cam- or air pilot-operated valves. Double-acting clamps require a 4 way valve.

CLAMPING AUTOMATICALLY: To automatically unclamp and reclamp the load station as the coupling rotates, connect the coupling's return line R directly to the power source's reservoir (no pressure). To avoid any pressure drop as the table indexes, the power source's fluid flow rate (cu.in./min.) should be at least 240 times the fluid required at any one clamping station (cu.in.). Otherwise an accumulator must be installed on the pressure line from the power source.

DESIGN CONSIDERATIONS:

1. To use a standard Rotary Valve Coupling, the table must rotate through the same angle during each indexing movement.
2. Turning the coupling requires additional table-motor starting torque, especially when clamping automatically during indexing.
3. Maximum rotational speed is 10 RPM.
4. Use only with the following hydraulic fluids: those listed in F&A section. To use any other hydraulic fluid, check with factory first. Fluid must be clean (10 micron or better nominal filtration).
5. Do not turn coupling while dry, even before installation. Fill unused ports with fluid before capping off (e.g. when using an 8-station coupling for 4 stations).
6. Use only 1/4 BSPP fittings. Fitting-installation torque must be 28-35 ft.lbs.
7. Couplings can not carry load. Especially side load which will cause excessive, uneven wear.
8. With the load station unclamped, there is a small return-line leakage rate. Always install an accumulator, especially above 3000 psi.

MOUNTING: Firmly fasten either the top or bottom half of the coupling using the tapped mounting holes provided. Use a floating reaction bar to prevent the other half from rotating. Mount at the center of rotation, either above, below, or on the rotary table.

SPECIALS: For additional stations or special features, please contact factory.

Rotary Valve Couplings are also available for use with automatic coupling systems, for loading multi-sided tooling blocks. Please contact factory for information.

This application shows a multiple-spindle machine with four stations, for machining aluminum covers. An 8-station rotary valve coupling is at the center, with its four unused ports plugged.

Rotary Air Valve Couplings

145 psi air max
Single and double acting

Single Acting

- For rotary index tables with an independent load/unload station
- Unload and reload while all other stations remain clamped
- Unclamps automatically at load station, or via a clamping valve
- Available from stock for rotary tables with 2 through 10 stations

OPERATION: One half of the Rotary Valve Coupling rotates with the index table, while the other half remains stationary. Each time the table and coupling index, a new station automatically becomes the load/unload station. The coupling supplies loading station separately from all other stations. The loading station can be either unclamped and reclamped automatically as the coupling rotates, or controlled by a separate clamping valve.

Single Acting

Double Acting

Bottom connections supply to each fixture station (1/4 BSPP Port, 1/4 BSPP male to 1/4 NPT adapter supplied. Ingestion of pipe dope or teflon tape may cause malfunction or damage to valve)

DESIGN CONSIDERATIONS:

1. To use a standard Rotary Valve Coupling, workpiece must be unloaded and reloaded at the same station. Also, the table must rotate through the same angle during each indexing movement.
2. Turning the coupling requires additional table-motor starting torque, especially when clamping automatically during indexing.
3. Maximum rotational speed is 10 RPM.
4. Although couplings are well sealed, an external cover may be necessary to protect the coupling's siding surfaces against extreme dirt and grit.

CLAMPING BY CONTROL VALVE: The loading station can be clamped and unclamped manually (or by a machine controller's electrical signal) using a 3-way valve mounted off the rotating table. This insures that a new workpiece will not move during indexing, before it is securely clamped. Double-acting clamps require a 4-way valve.

MOUNTING: Firmly fasten either the top or bottom half of the coupling using the tapped mounting holes provided. Use a floating reaction bar to prevent the other half from rotating. Mount at the center of rotation, either above, below, or on the rotary table.

SPECIALS: For additional stations or special features, please contact factory. Possibilities include:

1. Any number of stations
2. Multiple load stations (2 or more)
 - Controlled independently or together
 - Side by side, opposite, or at any other orientation

Pallet Decouplers

7250 psi max
Single acting

Single Acting

- Allows disconnecting a single-acting fixture from its power source before machining
- Compact assembly mounts easily on fixture (lay gauge flat for an even lower profile)
- Ideal for pallets and rotating fixtures where a fluid feed line is impractical
- Decoupler includes shutoff valve, quick disconnect, accumulator, pressure gauge, and pressure-relief valve
- Do not use NPT fittings

POWER UNIT: Any standard single-acting power unit can be used with this pallet decoupler.

OPERATION:

1. Remove protective cap from male quick disconnect on decoupler. Clean coupling components if necessary.
2. Connect hydraulic hose, with female quick disconnect, to the pallet decoupler. The power unit should be in unclamped mode (depressurized) before connection.
3. Open shutoff valve on decoupler to unclamp fixture.
4. After unloading and reloading fixture, actuate power unit to clamp.
5. After pressure gauge shows proper clamping pressure, close shutoff valve on decoupler.
6. Switch power unit to unclamped mode.
7. Disconnect hose and replace protective cap on male quick disconnect. Hose can be connected to optional safety support while not in use.

SAFETY FEATURES: Pallet decouplers include an accumulator to compensate for pressure changes due to temperature variations. Important: use pallet decouplers only with Roemheld components, because all system components must be zero leakage. These decouplers are equipped with a pressure-relief valve to protect the fixture and the accumulator from extreme temperature increases. An optional safety support with a limit switch can be used to hold the hydraulic hose after uncoupling, to ensure that the fixture is disconnected before moving.

Accumulator Size	Compact	Large
Maximum operating pressure (psi)	7250	7250
Minimum operating pressure (psi)	1800	1800
Accumulator volume at 7250 psi (cu. in.)	0.6	3.4
Accumulator volume at 1800 psi (cu. in.)	0.16	0.9
Accumulator gas preload (psi)	1450	1450
Weight (lbs)	8.4	12.7
Part No., Decoupler	CLR-9425-012-PD	CLR-9425-011-PD
Part No., Female Disconnect	CLR-9384-106-F	
Part No., Safety Support	CLR-0942-001-PDA	

Carr Lane Roemheld Mfg. Co.

Pallet Decouplers

7250 psi max
Single or double acting

Single Acting or Double Acting with Automatic Shutoff

- Allows disconnecting a single-acting fixture, a double-acting fixture, or a fixture with several individual clamping valves from its power source before machining
- Automatic shutoff using a pilot-operated check valve...no manual shutoff valve required!
- Compact assembly mounts easily on fixture
- Ideal for pallets and rotating fixtures where a fluid feed line is impractical
- Decoupler includes pilot-operated check valve, quick disconnects, accumulator, pressure gauge, and pressure-relief valve

POWER UNIT: A double-acting power unit with a four-button control switch (B1, B2, B3, B4) is required to use this pallet decoupler for either a single-acting fixture or a double-acting fixture. The power unit provides automatic shutoff capability, via the decoupler's pilot-operated check valve, and allows depressurizing both pressure hoses simultaneously for uncoupling. See table below for power-unit part number. This pallet decoupler can also be used where clamping is controlled by individual clamping valves on the fixture (3-way valves for single acting or 4-way valves for double acting). In that application, one constant-pressure hose and one return hose are connected to the decoupler, so any standard single-acting power unit can be used.

Female Disconnect Double Coupler

(order separately)

OPERATING SEQUENCE FOR UNCLAMPING/CLAMPING:

A) SINGLE-ACTING CYLINDERS

Operating sequence for **unclamping** with coupling for single-acting cylinders:

- 1) Remove dust cap and clean coupling parts, if necessary.
- 2) Connect coupler of quick-disconnect coupling in depressurized mode.
- 3) Open high-pressure shut-off valve.

Operating sequence for **clamping** with coupling unit for double-acting cylinders.

- 1) Coupler of quick-disconnect coupling is coupled and high-pressure shut-off valve is opened.
- 2) Actuate power unit until pressure gauge shows required clamping pressure.
- 3) Shut high-pressure shut-off valve.
- 4) Set pressure generator to unclamping position.
- 5) Disconnect coupler of quick-disconnect coupling and put into a safety support, if necessary.
- 6) Attach dust cap to coupling nipple and coupler.

B) DOUBLE-ACTING CYLINDERS

Operating sequence for **unclamping** with coupling unit for double-acting cylinders:

- 1) Remove dust cap and clean coupling parts, if necessary.
- 2) Connect multi-coupler in depressurized mode: For the purpose switch selector switch to **"couple."**
- 3) Switch selector switch to **"unclamp."**

Operating sequence for **clamping** with coupling unit for double-acting cylinders.

- 1) Multi-coupler is coupled.
- 2) Switch selector switch to **"clamp."** After pressure build up, the green lamp is signaled.
- 3) Set multi-coupler to depressurized mode: For the purpose switch selector switch to **"couple."**
- 4) Disconnect multi-coupler and put it into a safety support, if necessary.
- 5) Attach dust cap to coupling nipple and coupler.

SAFETY FEATURES: Pallet decouplers include an accumulator to compensate for pressure changes due to temperature variations. Important: use pallet decouplers only with **Roemheld** components, because all system components must be zero leakage. These decouplers are equipped with a pressure-relief valve to protect the fixture and the accumulator from extreme temperature increases. An optional safety support with a limit switch can be used to hold the double coupler after uncoupling, to ensure that the fixture is disconnected before moving.

Accumulator Size	Compact	Large
Maximum operating pressure (psi)	7250	7250
Minimum operating pressure (psi)	1800	1800
Accumulator volume at 7250 psi (cu. in.)	0.6	3.4

Accumulators

7250 psi max

Compact

Large

- Extremely compact accumulator, ideal for workholding applications
- Can also store fluid potential energy between working cycles
- Operates comfortably at up to 7250 psi
- Choice of large or compact size

****Do not use NPT fittings**

SPECIFICATIONS: Nitrogen-filled diaphragm type accumulator. Allowable operating temperature 15 to 175° F. Install in any position, horizontal or vertical.

DESIGN CONSIDERATIONS:

1. Use only with Roemheld components because all system components should be leakfree.
2. Since a fixture's fluid lines are sealed after disconnection from the power source, fluid pressure will actually increase if fixture temperature increases. This increase can be quite substantial: about 80 psi per 1°F. Be careful not to exceed 7250 psi at any time during the machining cycle. Always install a pressure gauge in the closed system.
3. If the possibility of exceeding 7250 psi exists, install a Relief Valve (see valves section) in the system.
4. Shield accumulator if the possibility of accidental damage exists.

Example:
Accumulator circuit with all safety devices installed.

Size	Compact	Large
Maximum operating pressure (psi)	5800	7250
Minimum operating pressure (psi)	1800	1800
Accumulator volume at 7250 psi (cu. in.)	.60	3.4
Accumulator volume at 1800 psi (cu. in.)	.16	.9
Accumulator gas preload (psi)	1450	1450
Weight (lbs)	0.7	5.0
Part No.	CLR-9606-102-PDA	CLR-9605-611

Threaded Coupling Elements

7250 psi max

Manifold Mounted

- Very compact coupling units
- Flush mounting in uncoupled mode
- Ideal for pallet coupling with vertical guided connection
- Optional return line relief
- Two sizes with and without coupling against pressure

Depending on the version, the coupling elements can either be coupled in energized mode, or de-energized mode only. The operating mode depends on the type of sealing elements which are used and can be taken from the table below.

The max. positioning tolerances in axial and radial direction are indicated in the table below.

The sealing areas at the side of the coupling elements have to be cleansed before coupling, to ensure the tightness in coupled mode. We recommend to wash the elements and finally clean them with compressed air. Dust caps should be used as far as possible.

APPLICATION: Compared to other coupling elements the threaded coupling elements are very compact devices.

If the slide movement of the workpiece carrier is to be used or if a fixture is to be used or if a fixture is to be connected to the base plate without lines, the threaded nipple and the coupling mechanisms can be directly screwed into the parts which are to be connected. The coupling mechanisms have the advantage that they are flush-faced in uncoupled mode.

Flange-type housings are available to simplify the manufacture of the fixture mounting hole contours. In cramped conditions it is possible to make and install the flange-type housing retrospectively.

The fixture bodies which are to take up the coupling parts have to be guided .125 in. parallel before they are coupled.

The axial forces which arise during the pressure build-up in coupled mode (see diagram) have to be absorbed outside the coupling parts.

The threaded nipples, which are installed into the tank lines, are equipped with a pre-loaded valve (VSV). The pre-loaded valve limits a possible pressure build-up in the return line, caused by internal leakage in the hydraulic clamping elements, to approx. 75 psi. In coupled mode the pre-loaded valve is not effective.

Pressure Switches ■ F9.732

Pressure Switches ■ Hydra-electrical signal converter ■ Pressure adjustment ranges ■ 75-1885 psi, 725-5075 psi & 725-7975 psi (5-130 bar, 50-350 bar & 50-550 bar)

Hydra-electric pressure switches are devices which close or open electrical contacts under pressure. They are used to switch on or off pump motors, valves, machine tool interlocks or similar applications in power units, machines and installations. The switching point can be

adjusted to the desired hydraulic pressure via a knurled knob. The knob can be locked in place by tightening a set screw. The installed microswitch is a change-over switch which can be connected as break or make contact. The electrical connector can be index 4 x 90°.

Air Filter/Regulator/Lubricator

CLR-100-FRL
Recommended for all incoming air-pressure lines (included with air power unit). Filter removes solid contaminants and water from the air supply. Lubricator provides an oil mist to lubricate the system. Regulator is essential to control input air pressure, and thereby control output fluid pressure.

Fine Air-Pressure Regulator

CLR-200-FR
Miniature regulator for adjusting air pressure between 1 and 10 psi (30 psi gauge). Use with air-advanced work supports to finely adjust contact force. 1/4 NPT ports.

Air Extractor/Dryer

CLR-105F-AED
Effective extractor/dryer that removes air moisture and dirt to increase the life of air-powered components. Replace or clean filter/gasket every 6-12 months (part no. CLR-403-AEDA).

Air Flow-Control Valve

CLR-100-AFC
Simple valve to reduce air flow rates and reduce clamping speed. Release air pressure to adjust setting.

Fluid 6-Port Manifolds

Quick Disconnects

General Use

Flat Face Non-Spill

Color Coded with Alignment Pins

- X Color Code**
 1 = Black
 2 = White*
 3 = Red
 4 = Yellow
 5 = Green
 6 = Blue

Our color coded quick connects are not only easily identified by color but each color contains its own unique alignment pin so that it is physically impossible to mix them up.

* The white nipple only, 9384-727, comes with a built-in pressure relief valve. This limits possible pressure build up due to internal leakage. Relief pressure = 72 psi (5 bar).

*** For G 1/4 fittings and adapters see Fitting Pages**

High Pressure Inline Filters

7250/3000 psi max

CLR-000-V

CLR-100-V

CLR-3887-087

- Replaceable filter elements
- Simple and compact in design
- Easy to install on any new or existing system
- Do not use NPT fittings

OPERATION: Install the filter in the output line of the pump to provide filtration of the oil entering the system. The oil passes through the filter assembly from inlet port to outlet port.

CAUTION: Do not attempt to replace filter element with pressure in system.

Recommended mounting position is with filter body vertical, plug on the bottom. This mounting position allows contaminated filter elements to be changed without removing existing piping or tubing. Simply remove the end plug, spring, and spring retainer to get at the filter element.

CAUTION: Mounting position other than as recommended...remove entire filter assembly for servicing.

Tubing Installation

**CLR-100-TL
Tubing Cutter**

Cutting

1. Use only steel tubing as specified on the previous page.
2. Cut tubing with a tubing cutter or hacksaw.
3. File or sand tubing end square. End must be square to achieve a proper flare.

Drill Bit Deburring Tool
deburrs O.D. and I.D. simultaneously,
adjustable chamfer, 50-200 rpm

PART NO.	For Tube O.D.	Shank Ø
CLR-202-TL	1/4"	1/4"
CLR-203-TL	5/16"	5/16"
CLR-204-TL	3/8"	3/8"

**CLR-201-TL
Hand Deburring Tool**
I.D. & O.D. 1/4" - 1-1/2" pipe

Tubing Benders

PART NO.	For Tube O.D.
CLR-401-TL	1/4"
CLR-402-TL	5/16"
CLR-403-TL	3/8"

The **Roemheld** tube bender shown is a simple, effective bender we highly recommend. When bending tubing carefully avoid wrinkling, flattening or kinking the tube. Please note: complete flaring before bending.

**CLR-300-TL
Flaring Tool**

Flaring

1. Place nut and sleeve over tube before flaring.
2. Place tube in flaring tool, approximately 1/8" above top of block.
3. Clamp assembled block in vise.
4. Center pin guide of flaring tool in tube.
5. Strike flaring tool 3-4 times with sharp hammer blow. Remove from block.
6. Inspect flare so that their outside diameters extend beyond the inner lip of the sleeve, but not beyond the sleeve's OD.

Installation

We recommend using tubing clamps as this will increase the life of the installation. Tubing clamps should be less than four feet apart (Figure 1) and bends should be supported also (Figure 2). Use bends as shown in Figures 3 and 4 instead of straight-line connections to prevent stressing the tubing.

Important: Never use tubing lines as handles to lift fixtures.

Assembly

1. Slide nut and sleeve on to flared tubing end and finger tighten.
2. Finish tightening with a wrench, 1/4 to 1/2 turn.

Note: Do not over torque.

**Single Tube
Regular and Stack Mounting**

- CLR-3300-892-TA Single clamp
- CLR-3300-600-TA Single mounting plate
- CLR-3300-225-TA Mounting screw
- CLR-3300-604-TA Stack-mounting screw
- CLR-3300-335-TA Stack-mounting clip

**Twin Tubes
Regular and Stack Mounting**

- CLR-3300-891-TA Twin clamp
- CLR-3300-607-TA Twin mounting plate
- CLR-3300-609-TA Washer
- CLR-3300-225-TA Mounting screw
- CLR-3300-613-TA Stack-mounting screw
- CLR-3300-615-TA Stack-mounting clip

Fittings ■ Metric ■ F9.300

Fitting accessories ■ with 24° cone as per DIN EN ISO 8434-1 plug-type connectors ■ hydraulic pipes ■ pipe clamps

- Worldwide spread high-pressure fitting system with quadruple safety
- Leak-free connection of piping and components
- Positive and safe connection by defined and limited digging into the hydraulic pipe
- Retightening of the union nut is not required
- The fitting can be disconnected and connected again as often as required.

Tube male stud coupling with cutting ring and union nut

Before tightening

After tightening

Screwed plug with knife edge

Suitable for high temperatures and aggressive media.
DIN 3852 T2 form B and EN ISO 1179-4

Screwed plug with elastic sealing

DIN 3852 T11 form E and EN ISO 1179-2
NBR: -35°C.....+ 100°C (series)
FKM: -25°C.....+ 200°C (available)

Suitable for soft mating materials (Alu).
High precision sealing (no sweating).
No retightening required.
Unlimited repeated mounting.
Interchangeable sealing ring.

Tapped hole with Whitworth pipe thread

EN ISO 1179-1 counterbore form N

Application example

Manifold Mounting

Benefits

- Eliminates tubing or hoses from working area
- Very close mounting of clamps
- Only one fluid feed line
- No traps for chips due to "clean" design
- Do not use NPT fittings

Many Roemheld components can be manifold mounted... powered directly through fluid passages drilled in a fixture. This unique mounting capability eliminates tubing and hoses in the working area, for clean fixtures without chip traps. Even fluid passages longer than your drilling capacity are possible by drilling shorter passages in separate blocks, then connecting them using connecting inserts.

Perhaps most important, manifold mounting lets you put clamps and work supports closer together and in tighter spots (often letting you place more workpieces on a fixture).

Installation Steps

Installing Threaded Body Components

For easiest installation, we recommend the following procedure (Step 1 through 6). For proper sealing, the tapped hole's bottom must be flat, with a surface finish 125 RMS or better, and perpendicular to the hole's axis. A small drill-point is allowable (see component's catalog page for dimensions). A delrin sealing washer for the hole bottom is furnished with each component. **Do not use sealing compound or teflon tape.** Part numbers to order bottoming taps:

- 1-1/4 — 16 CLR-512-TL
- 1-1/2 — 16 CLR-515-TL
- 1-7/8 — 16 CLR-518-TL

Installing Components with O-Ring Ports

Mounting surface should be ground flat with a 32 RMS or better surface finish, so that the O-ring seals properly. Torque mounting screws evenly. **Do not use sealing compound or teflon tape.**

Order Extending Clamps, Swing Clamps, and Sequence Valves by a different part number for manifold mounting (O-rings are included, and no port plugs are needed). Edge Clamps and Block Work Supports are easily converted to manifold mounting (order o-ring CLR-3000-343-SW and CLR-810-F port plug).

Port Fittings

CLR-807-F
1/4 BSPP Port Fitting
Standard port fitting found in virtually all Roemheld components. To use for custom manifolds, order special bottoming tap for installation, part number CLR-514-TL. Drill, tap (5/8-inch minimum depth) and spotface. **Do not use sealing compound or teflon tape.**

CLR-902-F
1/2-20 Port Fitting
Port fitting for custom manifolds. Install using a standard 1/2-20 tap. Drill, tap (5/8-inch minimum depth) and spotface. **Do not use sealing compound or teflon tape.**

Manifold Mounting

Benefits

Connecting Plates Together

Connecting Inserts are used to provide a leak-free connection when a fluid passage goes through two separate sections of a fixture. The insert has two O-ring seals to provide leak-free sealing. Choice of two insert lengths: short (for flush connections) and long (for connections with a gap of up to .197"). Do not use sealing compound or teflon tape. Made from steel, with FKM O-rings. **For removable plates consider flush faced coupling elements CLR-0460-735-TBC and CLR-0460-638-TBN.**

Type	Short	Long-Metric	Long-USA
Max. operating pressure	7250 psi	7250 psi	7250 psi

Part No.	CLR-9210-132	CLR-9210-127-F	CLR-901-F

Plugging Drilled Passages

Expanding Plugs are used to plug the end of an oil channel. Each plug consists of a ball mounted into a sleeve which, when installed, expands and seals to the inner bore of the hole. Installation consists of preparing the hole, inserting the plug, and striking the ball to expand the sleeve. Do not use sealing compound or tape. Please consider using bleed screws instead of expanding plugs in some holes. This allows bleeding of the drilled channels.

Hydraulic Bleeding

Some drilled oil passages should have the ability to be opened for fixture bleeding. By using a sealing washer and plug, air in oil passages can be released. This is only recommended for small holes. Larger holes should be prepared to accept larger threaded plugs like CLR-810-F.

Size	1	2

Application Example

Two-sided Palletized Fixture for Machining Both Sides of an Aluminum Housing

Cartridge/Manifold-Mounted Swing Clamps
(See Swing Clamps section)

Fluid-Advanced Work Supports
(See Work Supports section)

Palletized fixture holds two aluminum castings, allowing complete machining of both sides with only one setup. The fixture uses manifold-mounted Swing Clamps and Work Supports. Fluid is supplied through passages in the vertical fixture plate, so the fixture is free of tubing lines.

Both faces of the workpiece (above) are machined with one setup. Vertical fixture plate has cutouts (see photo at right) to allow access from both sides. Product designers integrated special clamping areas into the casting for easier fixturing.

Assembly and Handling Technology

Modular Units ■ Application and combination examples

Lifting module operated by foot pedal with rotating module vertical axis

Here a complex hydraulic subassembly requires access to 5 sides during the installation of its components.

The employee can rotate the workpiece 360° in both directions about the vertical axis of this rotating module. Now the employee can select the most ergonomic position via manual or electric operation. Model versions with indexing are available too; standard index angles are 45°, 60°, 90°, 120°.

The appropriate working height is adjusted by the foot pedal of the self-contained hydraulic lifting module.

Lifting module operated by hand pendant with rotating module horizontal axis

The assembly and testing of heavy workpieces such as axial piston machines is carried out at many stations. Transfer from station to station is made easy by fastening a tabletop plate to a hydraulic lift module that is mounted on top of a cart module.

Applying the brake on the cart module locks the unit in place. The operator can easily raise or lower the tabletop by pumping the foot pedal of the hydraulic lifting module.

Lifting module operated by hand pendant with rotating module horizontal axis

Multi-shift organizations know that every shift change also ushers in the change of each and every employee's size and ability. Modular combinations adapt to such changes and this one is composed of two modules: electric lift and horizontal-axis rotating. The electric lifting module effortlessly adjusts to an employee's height via a hand

or foot push-button pendant. The horizontal-axis rotating module does just what its name implies; it spins a workpiece about its horizontal axis. It has 360° of rotation in both directions. Push or pull your workpiece to rotate the version without indexing or automatically index to your next position using the hand-lever or foot-pedal versions.

Lifting module operated by foot pedal with tilting module and rotating module vertical axis

Optimum assembly of car seats requires the ability to quickly and easily move the seat into different positions. This modular combination allows the employee to raise, lower, rotate and tilt the seat. The tilting module is equipped with a pneumatic balancer that counteracts almost all of the tilting torques. This means very little force is required of the employee to tilt heavy objects.

Electrically operated lifting module in sync

Assembly of truck axles is carried out by two employees at the same time. Components are installed and fastened from above as well as from both ends. The working height is adjusted via a foot pendant that controls two synchronized electric lifting modules. The synchronized lifts guarantee a level work surface throughout the entire stroke. The lifting modules are mounted to a floor module to improve stability.

Lifting module operated by foot pedal with tilting module

Here the employee is carrying out the final assembly of an electric motor followed by a series of tests.

The working height is adjusted by the foot pedal of the hydraulic lifting module. The tilting module mounted on top of the lifting module allows the employee to tilt the motor back and forth by 90°. The integrated pneumatic-counterbalance feature makes tilting the motor a nearly effortless task.

Lifting Units

Manual-Hydraulic

- Self-contained units for lifting and height adjustment
- Single-pedal operation for sensitive, controlled lifting
- Square column resists torsional loads
- Choice of five stroke lengths, up to 23.62 inches
- To descend the lifting unit a maximum of 10% of Fz max. load is required
- The center of gravity should be within the traverse of the mounting bolts

OPERATION: Raise and lower unit using the same lever. Pump foot lever down 45 degrees to raise platform. To lower unit, lift lever 10 degrees to release pressure.

PRESSURE RELIEF: If pumping continues after reaching full height extension, pressure relieves automatically and returns fluid to the reservoir.

MOUNTING: Tapped holes in top and bottom plates allow attaching custom bases and tables.

CONSTRUCTION: Square column is made from anodized aluminum. Top and bottom mounting plates are black anodized aluminum. The operating lever is steel with bright zinc plating, with a molded plastic foot pedal.

MAXIMUM TORQUE LOAD: In the case of eccentric loads, it is recommended to compensate these by counterweights. In off-position the indicated maximum torques may occur.

The forces and torques have to be considered by the operator. During the lifting motion only 50% of the maximum values are admitted.
